Ag films, effect of gas adsorption meas. 4=7713
Ag films, effect of rate of deposition 2=14498
Ag films, effect of Sb diffusion, 70-105°C 1=979
Ag films, on glass, resistivity rel. to temp. 1=11258
Ag films, meas. 0=4979
Ag films, with SiO, LiF, Cu_2O, Fe admixtures 0=3283
Ag films, surface, transverse electric field effects 3=15541
Ag films, rel. to thickness 2=18636
Ag, films, thickness var. and electron m.f.p. 4=22683
Ag, granular films, flicker effect 3=15540
Ag, liquid 0=19154
Ag, Lorenz number at low temps. 4=6919
Ag, non-crystal, films, at liq. N temp. 2=6423
Ag, plastic deformation effect, 77-293°K 4=22682
Ag, plastic deformation effects, +20° to −196°C 2=23235
Ag, scattering cross-sections and charges of impurity ions 3=17813
Ag, subject to large plastic strains 3=13036
Ag, thin granular films, flicker effect 2=8280
Ag, thin layers 2=8283
Ag, very thin films 2=14496
Ag–Al, resistivity, anomalous increase during ageing 0=17994
Ag antimony telluride 4=22722
Ag azide 4=17493
Ag binary terminal solid solns., resistivity 4=22685
AgBr crystals, u.s. field effect 4=22767
AgBr, defect electron cond., rel. to reaction with Br_2 3=6912
AgBr, effect of Br_2 and Cl_2 gases 1=3727
AgBr, grains from emulsions 0=1616
AgBr, solid, ion and electron conduction 0=4322
AgCd–AuCd β-system, rel. to transforms. 2=17040
AgCl, defect electron cond., rel. to reaction with Cl_2 3=6912
AgCl, effect of Cl_2 gas 1=3727
AgCl, electron drift mobility, 70-350°K 3=6486
AgCl, ionic quenching and annealing 2=3982
AgCl–Ag_2S molten mixtures 4=24236
Ag halides 0=20871
Ag halides, Ag sulphide doped, ionic cond. 2=10495
Ag halides, electron mobility, polaron study 1=949
Ag halides, ionic 3=13007
Ag_2HgI_4, press. depend. 4=26105
AgI, diffusion of Ag at high pressures 2=18605
AgI, under v. high press., metallic conduction 3=17812
$AgIn_3Te_5$ 4=26060

Conductivity, electrical—contd
Ag–Mn alloys, electron scattering contribution 1=14243
Ag–Mn alloys, Lorenz number in mag. field 2=14395
Ag–Mn alloys, low temperature anomalies 1=11257
$(Ag_{x/2}Pb_{1-x}Bi_{x/2})Te$ 0=4646
AgPd alloy, cold worked, resistivity recovery 2=23231
Ag_2Pd_3S 0=18001
$AgSbTe_2$, resistivity, 80° to 300°K 3=13144
$AgSbTe_2$–$AgBiTe_2$ rel. to constituent properties 2=18759
$AgSbTe_2$–$AgBiTe_2$, –PbTe and –SnTe systems 3=10900
$AgSbTe_2$–PbTe, rel. to constituent proportions 2=18759
Ag–Se layers, resistivity 0=7968
Ag_2Se, beta ray effects, 2 MeV 4=10070
Ag_2Se, effect of doping 1=6186
Ag_2Se, 80°-600°K 3=2926
Ag_2Se, films 0=16363
Ag_2Se, polycryst., rel. to Cu diffusion 2=12459
Ag_2 VI's, pseudo-binary systems, electronic and ionic 1=12410
Ag_2Te evap. films 3=833
β-Ag_2Te, ionic conduction, composition depend. 0=20872
Ag_2Te, +20° to −190°C 3=20343
Ag–Tl–B glasses, temp. depend. 0=15881
AgTlTe, resistivity rel. to temp. 3=874
Ag–Zn, β, β' and ζ-phases 3=8396
Al and Al alloys, 4-120°K 0=7857
Al and Al alloys, solid and molten 0=4314
Al, bulk state, 14°–20.4°K 2=18630
Al, cold-worked, effect of impurities 0=2839
Al, after cold working, −190° to 340°C 4=4037
Al, and crystal point defects, due to α-rays and cold working, temp. var. 3=17816
Al, due to crystal stacking faults, temp. var. 4=12772
Al, deformed and annealed 1=17508
Al, effect of cold working 1=6123
Al, electron irrad. effect, recovery 3=15489
Al, fall of resistivity, rel. to quenching vacancies 1=6105
Al film, evaporated, in vacuum 3=8494
Al film, normal and supercond. 4=20608
Al films, critical thickness 0=6389
Al films, rel. to adsorbed O 3=16872
Al films, rel. to electron mean free path 2=16620
Al, films, surface, transverse electric field effects 3=15541
Al, 4.2°-1.65°K, rel. to sample size 3=2851
Al, free electron conc. and mean path 2=20979
Al, and hardness, changes on coldworking 3=13373
Al, high purity, under work hardening and recovery 2=796
Al, Lorenz number at low temps. 4=6919
Al, low temp., rel. to u.s. attenuation 0=1568-9
Al, microscopic parameters, from optical and elec. macro-properties 0=6077
Al, after neutron irrad. at 78°K 4=4091
Al, polycryst., resistivity rel. to excess vacancies and dislocation loops, 20°K 3=4907
Al, residual resistivity, purity determination 4=12852
Al, residual resistivity, size effect 3=22890
Al, resistance, 20°-58°K 3=2852
Al, resistivity of dislocations 2=23230
Al, resistivity of dislocations, expt. determ. 4=6848
Al, resistivity rel. to electrolytic self-diffusion 4=17439
Al, resistivity restoration by neutron irrad. at 77°K 4=26002
Al, scattering cross-sections and charges of impurity ions 3=17813
Al, stress effects on residual, low temp. 4=22667
Al, super-pure after zone refining 3=20803
Al, surface enriched with Cr, Ti or Si 4=28535
Al thin films, cooled layers 3=4906
Al, 2.2°–22°K, rel. to lattice defects 2=16674
Al, rel. to vacancy elimination, dislocation density 0=15856
Al, very pure, defect props., to 4·2°K 1=17510
Al wires, He and H temps., electron mean free path 2=14487
Al–Ag alloys, residual, transport theory 3=25321
Al–Ag, and phase transform., metastable miscibility gap 4=7474
Al–Ag, zone-hardened 3=10717
Al–Al_2O_3–Au anodic film, low-freq. negative resistance 2=21108
Al alloys, with Cu, Ag, Zn, solute clustering effects 0=16347

Conductivity, electrical—contd
Al alloys, dilute, binary, recovery, on irrad. n, 78° K 4=1560
Al alloys, 4.2-348°K, deviations from Matthiessen's rule 0=1613
Al alloys with Mn, Cu, Si, microheterogeneities study 3=1347
Al alloys, rel. to solute conc., Guinier—Preston zones 3=8877
Al—Cu and Al—Mg alloys, specific elec. resist. 2=12393
Al—Cu alloy, rel. to clustering, deform. effect 3=18182
Al—Cu alloy, effect of plastic deformation 1=14877
Al—Fe alloy, ion velocity rel. to ion charge 1=20625
Al—SiO—Au, anodic film, low-freq. negative resistance 2=21108
Al_2O_3, on Al, temp. and elec. field depend. 2=2126
Al_2O_3 films, anodically formed, electron processes 0=4698
Al_2O_3 films, impurity 4=22760
Al_2O_3 films, ionic cond. 2=10937
Al_2O_3 films, tunnel currents for various contacts 4=22761
Al_2O_3, ionic transport number 1=7625
Al_2O_3 layers on Al, time depend. 2=23258
Al_2O_3, resistivity, rel. to creep 3=17868
Al_2O_3, single crystals, at high temp. 3=15610
Al oxide films, unidirectional, theory 1=3730
Al—Pu alloy, δ-phase stabilized, at $< 300°$ K 1=17412
Al—Pu, resistivity 1=14729
AlSb, Ta doping and high resistivity 3=13068
AlSb—GaSb, composition and temp. depend. 0=11706
AlSb—GaSb, conductivity and Hall effect 3=25352
Al—Zn, changes on annealing, and Mg impurity/vacancy interaction 4=12725
Al—Zn alloys, rel. to composition and temp. 0=2851
Al—Zn alloys, G.P. zone formation 1=20600
Al—Zn and phase transform., cooling depression of boundary 4=26544
Al—Zn alloys, residual, transport theory 3=25321
Al—Zn, zone-hardened 3=10717
Al—Zn—Mg alloys, meas., rel. to clustering 4=28995
Al-10 wt% Zn—0.10wt% Si, Ge, Sn, meas., clustering, 4=28994
Ar arcs, 10 000° to 15 000° K 4=24622
Ar, electron diffusion—mobility coeffs. ratio 3=4023
Ar, electron energy distrib., effect of CO_2 and H_2 impurities 4=11256
Ar gas, electron mobilities, cloud chamber meas. 3=23941
Ar ionized gas 1=5421
Ar ionized gas 1=11913
Ar, ionized partially, shock heated, electronic cond. in mag. field 4=27225
Ar, liquid, electron drift velocity, mol. impurities effect 4=16122
Ar, in magnetohydrodynamic generator 3=4263
Ar plasma, shock-heated, between electrodes meas. 4=11586
Ar, transport coeffts. and cross-sections calc. 4=11257
Ar and Ar—Ne mixtures, liquid, electron drift velocity 3=21400
Ar—BaO suspension, enhancement of Ar cond. by suspension, appl. to m. h. d. power generation 4=27224
Ar—Cs plasma 4=27545
Ar K seeded plasma at atmospheric press. 4=24638
As films 3=17875
As, pressure depend., up to 200 000 kg/cm² 1=5001
As, pressure depend., up to 200 000 kg/cm² 1=11251
As_2S_3 amorphous films, 3 to 8μm, I—V characteristics 3=889
As—S—Br glass 2=14647

As_2Se_3—As_2Te_3 system, liquids and glasses 2=17480, 19579
As_2SeTe_2, vitreous, effect of impurities 0=15944
As—Te—I and As—Te—Br semiconducting glasses 4=26029
As_2Te_3—Tl_2Te—As_2Se_3 resistivity 2=21109
Au 2=6538
Au, due to Ag and Zn impurities 3=25320
Au, rel. to annealing after quenching 3=4864
Au, cold-worked, resistivity rel. to annealing effect 4=7428
Au, and crystal vacancy clusters, on n irrad. or quenching, annealing effects 4=4038
Au, dislocations, rel. to stacking faults 2=6338
Au, doped, resistivity, quenched-in, recovery, 20°-170°C 3=17818

Conductivity, electrical—contd
Au, effect of lattice defects 1=19832
Au, effect of transition metal solutes over wide temp. range 1=17605
Au, electron irrad. effects at 10°K 0=6066
Au, electron irrad., low-temp. recovery 1=11256
Au, electron irrad. recovery, temp. var. 4=30600
Au, electron-irrad., resistivity annealing spectrum 3=2846
Au, electron scatt. by vacancies, pseudopotential method 4=6771
Au films 3=15543
Au films, decrease on adding surface layers 4=12856
Au films, effect of rate of deposition 2=14498
Au films, rel. to electrostatic charging 3=15545
Au, films, non-ohmic tunnelling effects 4=6927
Au films, saturation effect at high fields 4=26009
Au, films, on Si substrate 0=7911
Au films, surface, on supercond. Sn 4=22672
Au, films, surface, transverse electric field effects 3=15541
Au films, thickness and temp. var. electron kinetics 4=22670
Au, films, thickness var. and electron in f.p. 4=22683
Au, films, vac. deposited, change with ageing time 0=21248
Au films, rel. to various support 3=15542
Au, granular films, flicker effect 3=15540
Au, Lorenz number at low temps. 4=6919
Au, plastic deformation effects, +20° to —196°C 2=23235
Au, quenched-in resistivity, high-temp. recovery 0=20863
Au, quenched from <700°C, resistivity recovery 2=6409
Au, resistivity of stacking faults, vacancies 2=23230
Au, scattering cross-sections and charges of impurity ions 3=17813
Au, scatt. of electrons on impurities and resistance minimum at 4-6°K 0=2847
Au, subject to large plastic strains 3=13036
Au thin films 1=3712
Au thin films, rel. to structure changes 4=23578
Au, thin granular films, flicker effect 2=8280
Au, 2°-9°K 4=1698
Au, variations due to vacancies 4=10142
Au, very thin films 2=14496
Au wire, effect of N_2 gas pressure 2=10433
Au wires, rel. to annealing and quenching 3=4862
Au wires, recovery of quenched-in resistivity, effect of Ag impurities 1=14256
Au—Ag alloys, changes on heating and quenching due to ordering 3=22894
Au—1.2 at.% Ag, after quenching 2=10379
$AuAl_2$, liq. He to room temp. meas. 3=10718
Au alloys, effect on transfer of matter in break contact 1=16294
Au—Co thermocouple, 4-100°K 0=7858
Au—Cr, 2-90°K 0=6025
AuCu, temp. variation 20°-500°C 3=10720
$AuCu_3$, temp. coeff. of resistivity 2=10912
Au_3Cu, effect of ordering 0=17997
$AuGa_2$, liq. He to room temp. meas. 3=10718
$AuIn_2$, liq. He to room temp. meas. 3=10718
Au—Mn, temp. depend. 0=4483
Au—Ni thin films 3=8580
Au—Pd alloys, effect of plastic deformation 1=14360
Au—Pd alloys rel. to vacancies during quenching 1=19762
Au—Pt, 2-90°K 0=6025
$AuSb_2$, 2.5°-300°K meas. 4=15520
Au—Si complex deposits 3=20331
AuSn 4=7619
Au-transition metal alloys, model 2=16675
B, β-rhombohedral 4=25897
B, p-type 2=21149
B carbide, temp. depend., energy gap 2=8354
B—P alloys, resistivity 0=4355
Ba, effect of temp. and pressure 3=25323
Ba, and melting, phase transform., high press., temp. 4=16293
Ba ferrite, anisotropy and mechanism 4=6953
Ba ferrite, anisotropy, 20° to 180°C 4=10041
(Ba, Sr)TiO_3, with La, Ce and Bi impurities, positive temp. coeff. of resist. 4=26030
$BaTiO_3$, anomaly at Curie temp. 1=7690
$BaTiO_3$, doped, and Hall effect, temp. depend. 3=8515
$BaTiO_3$, effect of MnO_2 doping 3=8560
$BaTiO_3$, effect of rare-earth doping 2=14619

Conductivity, electrical contd

Cr—Al liquid alloys, rel. to Cr conc. and temp. 4=8181
Cr borides, carbides and nitrides 1=3707
Cr—Fe liquid alloys, rel. to Cr conc. and temp. 4=8181
Cr—Fe—F liquid alloys, rel. to Cr conc. and temp. 4=8181
Cr—N alloys, dilute 3=6865
Cr nitrides 3=865
Cr—Ni alloy, rel. to ordering 0=8271
CrO_2, anomaly at Curie temp. 1=14395
Cr_2O_3, kinetics of Nb_2O_5, V_2O_5 donor addition 4=30535
Cr_2O_3, rel. to neutron irrad. 4=10049
Cr_2O_3, single crystal 4=26099
CrS_X (x = 0.95-1.20) 1=14465
CrSb, temp. depend. 0=1612
Cr—Se system, rel. to structure 4=1549
CrSe, both quenched and annealed, anomalies 2=23686
$CrSe_X$, 1.00 ≤ x ≤ 1.33, rel. to temp. 4=22763
Cr silicides, solid and liquid, var. conc. 4=11212
$CrSi_2$, rel. to semicond. props. 4=20357
$CrSi_2$, −200°-+1200°C meas. 3=25427
$CrSi_2$—$MnSi_2$ 1=3797
$CrTe$, temp. and press. depend. 1=17619
Cr—Te—Se 1=17619
Cs, effect of Debye—Waller factor 1=4974
Cs plasma, effect of electrode film barriers 3=21820
Cs plasma, weakly ionized 3=12186
Cs, rel. to pressure 4=12854
CsAu, resistivity 3=20328
CsBr, rel. to ionic diffusion coeffs., 300-550°C 0=9917
CsBr single crystals, transport number, 350-450°C 0=9948
CsCl, 230°-500°C 2=12449
CsI, ionic defect model 2=14508
CsI, rel. to ionic diffusion coeffs., 300-550°C 0=9917
Cs—Sb films, rel. to composition 3=8495
Cs—Sb layers, var. with Cs content 3=8574
Cs—Sb, temp. depend. 0=1667
CsSb and Cs_3Sb 0=11709
Cu, anomalous Lorenz parameter 2=21095
Cu, cold-worked 0=15888
Cu, and crystal point defects, due to α-rays and cold working, temp. var. 3=17816

Conductivity, electrical—contd
Cu crystal whiskers, low temp. min. 4=17478
Cu, dislocations, Thomas–Fermi model 3=2801
Cu, effect of elastic stress after plastic deformation 2=23232
Cu, effect of O_2 chemisorption 2=14591
Cu, effect of interstitial atoms 2=16643
Cu, effect of transition metal solutes over wide temp. range 1=17605
Cu, effects of deformation at very low temps. 2=14492
Cu, 82°-295°K, rel. to microcharacteristics 2=16624
Cu, electron irrad. effects at 10°K 0=6066
Cu, electron-irrad., resistivity stage I recovery, rel. to foreign solute atoms 2=21097
Cu, electron scatt. by vacancies, pseudo potential method 4=6771
Cu, electrotransport mobility of Sn impurities 3=8433
Cu, excess resistivity, calc., strain scattering by vacancies and impurities 0=9904
Cu films, after quench-condensing 2=23242
Cu, films, quenching condensation, disorder energy 0=3278
Cu, films, with SiO, LiF, Cu_2O, Fe admixtures 0=3283
Cu films, surface, on supercond. Sn 4=22672
Cu, 4.5°K, resistivity, rel. to irradiation 3=10698
Cu, granular films, flicker effect 3=15540
Cu, and hardness, changes on coldworking 3=13373
Cu, in InSb, diffusion mechanisms 3=17783
Cu, isochronally annealed, cooling rate, hydrogen—vacancy interaction effect 4=30606
Cu, Lorenz parameter, anomalous, at He temps. 4=17471
Cu, low temp. min., effect of Sn, Fe impurities 4=20330
Cu, rel. to oxidation and reduction up to 600°C 3=2012
Cu, plastically deformed, relaxation behaviour 4=10025
Cu powder, cold pressed, rel. to temp. 2=6785
Cu, pure, residual resistance ratio 2=18632
Cu, resistivity at low temp. 0=2845
Cu, resistivity recovery after electron bombardment at 4·2°K 3=8468
Cu, resistivity of stacking faults 0=20794
Cu, scattering cross-sections and charges of impurity ions 3=17813
Cu semitransparent films 1=1142
Cu, with spherical voids 0=4318
Cu, surface enriched with Cr, Ti, Si, B or Ni 4=28535
Cu, thin granular films, flicker effect 2=8280
Cu, 2-4°K, Lorenz number 0=15885
Cu, with vacancies 3=15481
Cu vapour, calc. 2=21949
Cu, very thin films 2=14496
Cu, wire, recovery after cold working at 78°K 3=20266
Cu–Al, after quenching 2=23882
Cu–Al alloys, near solubility boundary 3=5132
Cu –Al (14·3 at.%), temp. var., and deformation 4=7487
Cu–Al alloy, vacancy formation by quenching 3=20868
Cu alloys, with Al, Si, Zn, cold worked 0=15888
Cu alloys with Cr, Mn, Fe, Co, low temp. 2=4081
Cu, alloys, dilute, at 4-120°K 0=9863
Cu alloys, 4. 2-348°K, deviations from Matthiessen's rule 0=1613
Cu alloys, low temp., temp. var. and thermal, Pippard's theory 4=17362
Cu–Au alloys, with Co, Fe, Mn impurities 1=111254
Cu–Au alloys, disordered, residual, quantum theory 4=4109
Cu–As alloy, effect of plastic deformation and annealing 0=21131
Cu_3Au alloy, heat treatment effect 3=3330
Cu_3Au, quenched and plastically deformed 2=8273
Cu_3Au, shock wave effect on resistivity 4=26508
Cu-base alloys, resistance at 35°C, rel. to neutron irradiation 3=11291
Cu–Co, Cu–Fe, Cu–Mn dilute alloys, resistivity, effect of internal oxidation and heat treatment 0=17996
$CuFeS_2$ 3=1027
$CuFeS_2$, elec. props. 2=18888
$CuFeS_2$, temp. dependence 1=19872
Cu–Ge solid solns., supersaturated, decomposition 1=15159
CuI films 1=20536
CuI films, oxygen-controlled 3=13071
Cu–Mn alloy, effect of thermal ageing 1=1297
Cu–Mn, resistivity 1=14729
$Cu_xMn_{3-x}O_4$, rel. to composition and temp. 4=15555

Conductivity, electrical—contd
Cu–Ni alloys, disordered, residual, quantum theory 4=4109
Cu–Ni alloys, (80, 60, 40% Cu) sintered 1=10028
Cu–Ni and n prod. vacancy de-segregation on heat treatment 4=22645
Cu–Ni alloys, resistivity maxima at low-temp. Curie points 0=11662
Cu–Ni wires, resistivity, rel. to neutron-irradiation 3=10719
CuO, high-pressure effects 1=1024
Cu_2O, rel. to adsorption of air and water 4=1770
Cu_2O, effect of elec. field at surface 2=18859, 23592
Cu_2O, high-pressure effects 1=1024
Cu_2O, inversion layer at surface' 2=23380
Cu_2O, new acceptor energy level on Ag diffusion 1=19876
Cu_2O, press. depend. 0=1668
Cu_2O rectifiers, surface conductivity 0=13624
Cu_2O, single crystal 1=17727
Cu_2O single crystal, effect of oxygen 1=17726
Cu_2O, single crystal, 500–1100°C, in O_2 1=7646
$(CuO)_x(Mn_2O_3)_{1-x}$ 3=8521
Cu phthalocyanine, rel. to carrier mobilities 4=6994
α-Cu phthalocyanine, surface cond. meas. 4=28422
Cu–Sb alloy, dilute, effect of cold working 0=9934
Cu_2Sb, 2.5°-300°K meas. 4=15520
Cu–Ti alloy 4=1556
Cu–transition metal alloys, model 2=16675
Cu–Zn, α-phase, 4.2°-300°K 3=20267
CuZnβ, near transition temp. 2=15059
Cu–Zn alloy, effect of plastic deformation and annealing 0=21131
Cu–Zn alloy, identification of lattice imperfections 0=9900
Cu–Zn ferrites, temp. depend. 0=564
Cu–Zn–Sb alloys 3=23466
D plasma 1=7038
D_2, electron collision cross-sections in d.c. field 3=23942

Si, 0.002-10 000 ohm cm. resistivity, four-probe method 2=7530
Si, p-type, effect of deformation 0=13596
Si, p-type, impurity cond. at microwave freq. 4=4172
Si, p-type, I–V characteristics into breakdown region 2=21148
Si, p-type, resistivity minimum for oxidation conversion to n-type 4=12911
Si, p-type, space-charge-lim. hole injection and trap effects 4=6988
Si, pure, measurement 0=11698
Si, quasi-intrinsic, interelectron scatt. 3=20312
Si real surface, field effect and relaxations, 190°-620°K 4=10066
Si, resistance, rel. to pressure 3=18228
Si, resistivity at low temps., in electron activity meas. 0=592
Si, single crystals, effect of electron bombardment 0=18030
Si, small slices, resistivity meas., appl. of Siemen's method 4=28568
Si, surface 1=14454
Si, surface cond., boundary with electrolyte 2=16713
Si, surface, effect of dried O_2 2=6459
Si surface, rel. to temp. 4=12913
Si, temp. depend. when Ni -doped 4=4173
Si, thermal instability analysis 4=12909
Si, vacuum-cleaned surfaces 1=1066
Si, warm and hot electrons, anisotropy angle 4=10068
Si, zone-refined, p-type, in-pile coeff. 3=17867
Si: Ag 1=3688
SiC, n-type, transient recomb. meas. 3=10840
SiC, resistivity, up to 1300°K 1=17716
Si carbide, temp. depend. 2=8354
Si–Cr alloys, composition depend. 1=3797
Si–Fe alloys, resistivity anisotropy 1=14362
Si_3N_4, effect of C and Ti additives 2=8303
Si oxides in Si 2=23352
SiO films 4=22766
SiO films, with Ag and Au, rel. to optical reflectivity 4=22888
SiO_2, fused, solid and liquid, 1000-2480°C 4=12962
SiO_2, surface, due to adsorbed molecules 3=25318
Sm, 1.3-300°K 1=5003
Sn, anisotropy due to Brillouin zones 4=26015
Sn, bulk, tunnel effect 1.36°-3.6°K 3=1901
Sn, effect of Ga film 1=14910
Sn, effect of quenched in defects 1=17507
Sn films, rel. to adsorbed O 3=16872
Sn, films, rel. to electrostatic charging 3=15545
Sn films, after quench-condensing 2=23242
Sn films, rel. to thickness 2=18636
Sn films during vacuum deposition 3=25327
Sn, 4.2°-1.65°K, rel. to sample size 3=2851
Sn, 4.2-293°K 4=17583
Sn(grey), charge carrier effective mass, from Knight shift 1=1283
Sn(grey), oriented single crystals, 77-273°K 1=8960
Sn, liquid, electron mean free path, by positron annihil. 4=199
Sn, at low temp., rel. to u. s. attenuation 0=1568
Sn, at melting pt., fusion curve det. at 10^5 atm 0=9840
Sn, 0-505°K deviation from Matthiessen's rule 4=1566
α-Sn, press. depend., theory 4=6790
Sn, resistance, rel. to purity of metal 2=12490
Sn, resistance, 10° to 14°K 3=2852
Sn, resistivity, 3·75°-4·22°K, and residual at 0°K 3=8491
Sn, superconducting, surface impedance 2=11565
Sn, surface impedance, 1.9 Mc/s, 4.2°K, mag. field depend. 0=20875
Sn, surface impedance at 3 Mc/s in mag. field 4=6916
Sn thin films, resistivity temperature coefficients 1=6127
Sn, zone refined, measure of purity 0=13962
Sn alloys, 4.2-348°K, deviations from Matthiessens' rule 0=1613
Sn base cast alloys, rel. to composition 3=20262
Sn–Cu alloy films, quenched 1=3725

Conductivity, electrical—contd
SnI_4, under v. high press., metallic conduction 3=17812
SnO_2 films, impurity-free 3=17897
Sn oxide films, plasma oscillation 0=1623
SnO_2, 100-900°C, Sb doped 4=6990
SnO_2, Sb-doped thin layers, temp. depend. 0=16036

    $Na-NH_3$ solns., conc., liquid metal model 4=14183
    NaOH in H_2O 4=24237
    $ZnCl_2$, rel. to pre-freezing effects 3=3927
  measurement
      (subheading introduced in 1963).
    alkali halides, d. c., 20°-200°C instrumentation 4=28518
    analogue, elec. of multiresistivity systems 4=24527
    anthracene thin layers, in vacuum, impurities effect 4=30630
    crystals, anisotropy of resistivity, meas. using four-point method 4=25987
    by damping, cylinder rotating in a mag. field 3=19127
    electrodeless meas. for metal and semicond. melts 3=23904
    fuels, aviation, meas. instrument, portable 4=18215
    gases, determination from meas. on cylinder symm. arcs 2=15646
    gases, electron drift velocities from mol. excitation 4=11252
    geophysical prospecting, four-point, resolving power 3=21024
    impedance meas., three-terminal system 3=1906
    induction method meas. 4=422
    lamellae, nonuniform, van der Pauw's method 3=14467
    liquids, meter amplifier 4=18633
    low resistance meas. by induction method 3=19126
    meas., bridge, 5 c/s-500 kc/s, for quartz, high temp. 4=2927
    measurement, five probe method, theory 3=21674
    measurement, Si slices, 4 probe 4=10064
    measurement in situ for anisotropic media 3=343
    metals, crystals, recoil, meas. method 4=1552
    metals, electrodeless meas. 3=1907
    metals, low-temp., apparatus 3=9667
    metals, by magnetic suspension balance 4=2929
    metals, > 1000°C 4=342
    of moving conductor, by magnetic probe 3=5598
    organic semicond., elec. cond. cell for cond.: temp. meas. 4=28577
    oxides, binary, ion and electron, electrochemical method 4=4704
    plasma, without electrodes 3=5677
    plasma, meas. method 4=24641-2
    plasma, nitrogen, from temp. profile 3=7589
    polymers, drying techniques effect on results 3=4936
    Q-meter resistivity meas., thickness corrections 4=18632
    RC method, feedback network 3=14466
    sea-water, oscillator circuits, freq. stability 3=14486
    semiconducting materials, four-point probe for resistivity 4=26025
    semiconducting materials, resistivity meter, non-contact 4=22701
    semiconductor films, by Hall-effect parameters meas. 3=25776
    semiconductor post, microwave interaction method 4=22696

Conductivity, electrical—contd
  measurement—contd
    semiconductor sheet resist. nonuniformities, four-point probe 4=22697
    semiconductor surface cond., cleavage method 4=4167
    semiconductors, conductivity anisotropy, effect of specimen side-arms 4=28551
    semiconductors, cross-sectional variation, meas. 3=17844
    semiconductors, electrodeless meas. technique 3=342
    semiconductors, epitaxial and bulk, four-point probe 3=25341
    semiconductors, four-point probe 3=24160
    semiconductors, four-probe, geom. factor calc. 4=1584
    semiconductors, four-probe method, corrections 4=4137
    semiconductors of high purity 4=10069
    semiconductors, loss, by coaxial cell 4=6934
    semiconductors, meas. instrument 4=12879
    semiconductors, meas., microwave, analysis, slab in waveguides 4=12880
    semiconductors, meas. in microwave field 4=1580
    semiconductors, review 4=26024
    semiconductors, s.w.r. method 4=15531
    semiconductors, temp. depend., up to 1000°C 3=24159
    surface resistance measurement four-electrode system 3=9692
    of wakes of projectiles and other media 4=8588
    Wheatstone bridge, sensitivity 4=21434
    Al, resistivity of dislocations 4=6842
    Cs and Cs-Ar gas mixtures, temp. depend. 3=23939
    Cu phthalocyanine, surface cond. meas. 4=10137
    Cu-Zn alloys, 4.2°-300°K 3=20267
    Si, diffused layers by four-point probe 4=28448
    Si films, epitaxial 4=6989
Conductivity, thermal
      See also Heat conduction.
    aerosols, rel. to thermal forces on particles 2=2455
    at bonds, between sheet materials, use in testing 3=13984
    dense polyatomic fluids, approx. mol. theory 2=15537
    glass fibre mats, evacuated, as insulation 0=1051
    liquids and compressed gases, calc. 0=12415
    nuclear track emulsions at low temp. 4=16786
    relationship to viscosity 0=6734
    slab laid on ground, temp. field 1=1835
    thermal contact resistances, rel. to pressure 1=18639
    wire, var. with dia., and m.f.p. 3=22672
  gases
    acetylene, rel. to viscosity, rotational relax. meas. 4=5241
    air at high temps., collision integrals 2=9314
    air, through a laminar layer, var. dissociation 4=5242
    air, weakly ionized, tensors calc. 4=11525
    alkali metals, meas. 4=5243
    arc discharge, temp. depend., theory 0=10893
    cooling of hot wire in subsonic flow 0=3666
    dimethylamine, pressure and temp. depend. 0=19202
    ethane, rel. to viscosity, rotational relax. meas. 4=5241
    ethyl chloride, pressure and temp. depend. 0=19202
    ethylene oxide, pressure and temp. depend. 0=19202
    ethylene, rel. to viscosity, rotational relax. meas. 4=5241
    hydrogen, ratio of normal-and para-at 20°K 1=9382
    inert gas mixtures 0=104, 10696
    inert gases, multicomponent mixtures 4=11243
    inert, laminar heat flow, stagnation point 2=5065
    inert, in terms of Morse potential 4=8241
    interplanetary matter, eval. 2=21691
    for leak detection of vacuum system 2=21951
    at low pr. and temp. 0=19483
    methane, in H_2 and N_2, use for detection 0=16402
    methane, in terms of Morse potential 4=8241
    methane, rel. to viscosity, rotational relax. meas. 4=5241
    methyl bromide, pressure and temp. depend. 0=19202
    mixture, binary, var. temp., composition 4=11242
    mixtures, binary, relation to viscosity 2=19623
    mixtures, monatomic rel. to viscosity 4=16141
    mixtures, and viscosity 3=18849
    plasma, nitrogen, from temp. profile 3=7589
    polyatomic gases, interpretation 2=1206

Conductivity, thermal—contd
- **gases**—contd
  - polyatomic, nonpolar, rel. to viscosity 4=5240
  - propane, in H_2 and N_2, use for detection 0=16402
  - steam, rel. to temp. and density 4=8248
  - sun's atmosphere 1=11677
  - twentyfive, temp. var. 4=18245
  - use in chemical analysis 4=17875
  - very rare gases, cosmic examples 0=18609
  - Ar, arcs, 10 000° to 15 000° K 4=24622
  - Ar, calc., in presence of ionization 4=18241
  - Ar, up to 500°C 0=8711
  - Ar-He mixture 0=5054
  - Ar-He mixture 3=168
  - Ar-He-Xe mixture 0=5054
  - Ar, meas. at high densities 3=11832
  - Ar-Ne mixture 3=168
  - Ar, for negligible convection 2=5201
  - Ar, at 23°C by universal plane bicalorimeter 1=10550
  - Ar-Xe mixture 0=5054
  - CF_4, rel. to viscosity, rotational relax. meas. 4=5241
  - CO_2 4=29670
  - CO_2, in critical region 3=3833
  - CO_2, dynamic method, 40-180°C 0=14684
  - CO_2, meas. in crit. region, effect of convection 3=3834
  - CO_2, near critical point 2=21948
  - CO_2 near critical pt. 3=21589
  - CO_2, for negligible convection 2=5201
  - CO_2, pressure and temp. depend. 0=19202
  - CO_2, theory and expt. 4=21182
  - CO_2, rel. to viscosity, rotational relax. meas. 4=5241
  - D_2 plasma, radially constricted 3=16926
  - D_2O, 100°-500°C 4=235
  - H and He arc column with superposed mag. fld., calc. 4=18777
  - H and He^+ in discharge in mag. field, reaction ht cond. 4=29882
  - H, at high temp. 0=10797
  - H, for negligible convection 2=5201

electron probe microanalysis 4=10678
electron probe microanalysis 4=10679
electron-probe X-ray microanalyser, Harrogate (1962) 2=23925
electron processes in solids, kinetics (Berlin) 1=2382
electron tubes residual gases, Milan (1963) 4=11718
electron tubes and semiconductor devices, Pilani, India, Dec. 1962, review 4=603
electron tunnelling in solids, Philadelphia (1961) 2=12412
electron waves, Toronto (1959) 0=15134
electronic distance-measuring techniques, Washington (1959) 0=14567-70
electronic engineering, components and materials, London (1961) 2=143
electronic and ionic collisions, Riga (1959) 2=12273
electrophotography, Nov. 1960, review 3=16815
electrostatic power 1=264

Conferences—contd
- elementary-particle physics, recent European contribs., London (1963) 3=14925
- elementary particles, Aix-en-Provence (1961) 2=3291-2
- energy transfer with special reference to biological systems 1=4920
- equatorial aeronomy, Huancayo, Peru 3=21044
- ergodic theories 3=55
- excitons, Radiation Research Soc., Colorado Springs (1962) 4=6513
- fast neutron physics, Houston (Feb. 1963) 4=22142
- fatigue mechanisms in crystals (Florida, 1962) 3=20734
- Fermi surface of metals 1=6087
- Fermi surface in solids (1960) 1=11180
- Fermi surface in solids (1960) 1=17462-3
- Fermi surface in solids, New York (1960) 2=2064
- ferroelectricity, Moscow (25-30 April 1960) 2=12561
- ferromagnetic thin films, Knasnovarsk (1960) 2=12776
- ferromagnetism and antiferromagnetism, Leningrad (1961) 3=3086
- ferromagnetism, Berlin (1959) 0=18171
- ferromagnetism, Berlin (1959) 1=17983
- ferromagnetism, Wiesbaden (Oct. 1960) 1=7736
- films, metal, electric and magnetic props., Liège (1961) 3=13029
- films, thin solid, optics, Marseille (1963) 4=20438
- fluctuation phenomena and stochastic processes, London (1959) 0=4957
- fluctuations in solids 1=19840
- fluctuations in solids, Chicago (1960) 0=20876
- fluctuations in solids, Minnesota (1962) 3=6446
- fluid mechanics of ionosphere, New York (1959) 0=10417
- fluid mechanics of ionosphere, New York, 1959 1=2565
- foundations of mechanics and thermodynamics, Washington (1959) 0=14523
- fracture, atomic mechanisms, Swampcott (1959) 0=21146
- free radical stabilization, Washington (1959) 1=14109
- frequency control, Atlantic City 1962 3=7172
- frequency control symposium 1=104
- frontiers of numerical mathematics, Wisconsin Univ. (1959) 0=12232
- galactic and extragalactic research and electronic photography, CNRS (1959) 0=18832
- galactic system, structure and origin 1=8010
- galaxies, instabilities, California (1961) 2=2553
- gas discharge devices, Leamington Spa (1961) 2=5308
- gas discharges and electricity supply, Leatherhead (1962) 3=7450
- gases, rarefied, dynamics 3=11813
- gases, rarefied, dynamics, University of California (1960) 2=1171
- generation of temperatures below 1°K, London (1959) 0=7037, 16957
- geophysical prospecting, industrial and exploratory 4=10686
- glass, optical, physical structure and props. 4=10625
- glass, radiation effects Rochester (1962) 3=6549
- glass, viscoelastic props., Sheffield (1963) 4=4678
- gravitation theory, series of articles 4=8028
- gravitational theories, Varenna (1961) 4=24026
- Halley Bay expedition, Royal Society (1960) 0=18476
- heat to electricity, thermionic conversion, London (1961) 2=1379
- heat exchange and gas dynamics 4=8230
- He, liquid, Varenna (1961) 4=18507
- high-energy accelerators, Brookhaven, N. Y. (1961) 2=3105
- high-energy nuclear physics, Kiev (1959) 0=19959
- high-energy nuclear physics, London (1962) 2=16377
- high-energy physics, Geneva, (1962) 3=7815
- high-energy physics instrumentation, Geneva, July 1962 3=527
- high-energy physics, Rochester (1960) 1=8397
- high-energy physics, Tihany (Sept. 1962) 4=21689
- high magnetic fields, Cambridge, Mass. (1961) 2=13627
- high mag. fields, prod. and applications, Oxford, July 1963 4=647
- high polymers (Kyoto, 1958) 1=15165-7
- high-pressure physics and chemistry, collected papers 4=27002
- high temps., meas., London (May 1964) 4=27360
- high vacua, London (1959) 0=5057
- high-voltage accelerators 1=1931

Conferences—contd
- I.G.Y. conference, Moscow, 31 July-9 August (1958) 1=5172
- ice crystals, Berkeley California (1963) 4=7559
- image convertors and storage tubes 1=3004
- information processing for critical tables (Gordon conf.) 1=4234
- inorganic and intermetallic crystals, Birmingham 1963 3=25683
- inorganic solid radiation effects, Grif-sur-Yvette, France (1961) 2=10424
- interference microscopy, applications 1=16068
- internal friction due to crystal imperfections, Cornell University (July 1961) 2=16946
- International Conference on Plutonium Metallurgy, April 1960 1=7871
- international space science symposium, Nice (1960) 0=12332
- interstellar matter in galaxies, Princeton (1961) 4=7959
- ion bombardment effects, Paris (1961) 2=10423
- ionic melts, Liverpool (1961) 2=1132
- ionization in gases, Munich (1961) 3=1928
- ionization phenomena in gases, Paris (1963) 4=11506
- ionization phenomena in gases, Paris (1963) 4=11507
- ionization phenomena in gases, Paris (1963) 4=18670
- ionization phenomena in gases, Paris (1963) 4=18671
- ionization phenomena in gases, Uppsala (1959) 0=2314
- ionosphere, London (July 1962) 2=24029
- ionosphere, London (1962) 3=11422
- ionosphere, radiowave absorption, Athens (1960) 2=9716
- ions of the transition elements, Dublin (1958) 0=20727
- iron and steel industry, automatic control, Brussels (Feb. 1962) 2=15073
- irreversible thermodyn. and statist. mech. 3=9356
- joint conference, Non-destructive Testing Group and Société Française de Métallurgie, 2-4 May 1960 1=6684
- Kamerlingh Onnes, low temperatures, Leyden (1958) 0=7017
- lasers, military and civilian techniques, Hague, April 1962 3=518
- lasers, spectroscopic aspects, Conference, Great Malvern 1963 3=24039
- lattice defects and mechanical properties of solids 1=956
- lattice parameters, precision determination 1=11550
- linear accelerators, Brookhaven (1962) 3=7662
- liquid metals, Stoke Poges (1963) 4=149
- liquid state, Kiev (1963) 4=21087
- liquid state, London (1963) 4=5150
- liquid state, London, (1963) 4=16088
- low-energy nuclear physics, Paris (1958) 0=9227
- low and medium energy nuclear physics, Strasbourg (1961) 2=241
- low-temp. phenomena, Kiev, Oct. 1961 3=24124
- low-temperature physics, London (1962) 4=11428
- low-temperature physics, Sverdlovsk (1959) 1=2916
- low-temp. physics, USSR, (1958) 1=1857
- luminescence, Balatonvilagos (1961) 3=13194
- luminescence of chalcogenides, Prague (1962) 3=10977
- luminescence, crystal phosphors; at Kiev, June(1960) 1=3849
- luminescence, crystal phosphors, USSR (1960) 2=12614
- luminescence, crystalline, Greifswald (1959) 2=4163
- luminescence of inorganic solids, Prague (Sept 1962) symposium 3=6665
- luminescence, Minsk (1959) 1=2450
- luminescence, Minsk (Oct. 1959) 2=12613
- luminescence, Moscow (1961) 3=8612
- luminescence, Moscow, 1961, opening address 3=10978
- luminescence, organic and inorganic systems, New York (1961) 2=10613
- magnetic fields, high, MIT (1961) 2=22296
- magnetism and crystallography, Kyoto (Sept. 1961) 2=12750, 14762, 21284-6
- magnetism and magnetic materials, Atlantic city (1962) 4=13104
- magnetism and magnetic materials, Pittsburgh (1962) 3=13222
- magnetism, Sheffield (1959) 0=16120
- magneto-fluid dynamics 1=4700
- magnetohydrodynamics, engineering aspects 0=15131
- magnetohydrodynamics, engineering aspects 1=19002

Conferences—contd
- magnetohydrodynamics, engineering aspects, Berkeley (1963) 4=14871
- magnetohydrodynamics, engineering aspects, Rochester 1962 3=2095
- magnetoplasmadynamic power generation, Newcastle (1962) 3=21966
- many-body problem, Hoboken (1957) 4=27090
- many-particle problems (Utrecht, June 1960) 1=1707
- masers, Paris (1963), report 3=19475
- mass spectrometry, London (1962) 3=9879
- mathematical problems of quantum field theory Lille (1957) 0=7267
- Maxwell Colour centenary 1=16124
- mechanical vibration transmission through ground, London (Nov. 1961) 2=8944
- mechanics of anisotropic and inhomogeneous materials, Manchester, April 1964 4=23082
- medical science, Paris (1959) 0=14326
- medical science, Paris, (1959) 1=11655
- metallic thin layers, elec. and mag. props., Louvain (Sept. 1961) 2=14499
- metallurgy, surface phenomena 4=7690
- metals and alloys, theory, Kiev (1959) 1=2359
- metals, mechanical props. rel. to structure, Teddington (Jan. 1963) 4=26460
- meterology, New Delhi (1962) 2=21620
- microphones and hydrophones, London (Jan.1962) 2=15701
- microwave tubes 1=19036
- millimetre and submillimetre waves, Orlando (1963) 4=8922
- molecular and atomic motions in solids and liquids, Maxwell–Ampere (1959) 0=7829
- molecular energy levels, effect of environment 1=822
- molecular quantum mechanics, Colorado Univ. (1959) 0=13426, 17804
- molecular spectroscopy, Amsterdam (1961) 2=6117
- Mössbauer effect 1=600
- Mössbauer effect, Dubna (1962) 4=15398;
- Mössbauer effect, Ithaca, NY (1963) 4=15399
- Mössbauer effect, second international 4=9809
- movement of non-uniform ionized gas in mag. field, Tokyo (1958) 0=21334
- multiparameter analysers use in nuclear physics, Grossinger (1962) 4=11842
- neutron beams, London (1962) 3=10128
- neutron physics, Soviet progress 4=9002
- neutron scattering in solids and liquids 1=16797
- neutron scattering in solids and liquids, Chalk River (Sept. 1962) symposium 3=6456
- neutron scattering in solids and liquids, Chalk River (1962) 3=8326
- 1959 solar events, Helsinki symposium 1=7988
- 1960 conference on magnetism and magnetic materials, ferromag. resonance 1=6393
- Ninth Ampere Colloquium 1=4734
- 9th Ampere Colloquium 1=13184
- noise problems, London (1959) 0=6891
- non-destructive testing of materials 3=9391
- nonlinear magnetics, Washington (1963) 4=14846
- non-linear problems, Madison, (1962) 3=7084
- novae and supernovae, Haute Provence (Sept. 1963) 4=29394
- nuclear electronics, internat. symposium, Paris (1963) 4=11843
- nuclear electronics, London (1961) 2=7534
- nuclear electronics symposium, Paris (1958) 0=12719-20
- nuclear forces and the few-nucleon problem, London (1959) 0=3926
- nuclear fuel cycles, London (1959) 0=5813
- nuclear fusion research, Salzburg, review 3=15251-2
- nuclear instrumentation, North Carolina (1961) 2=3187
- nuclear instruments, Harwell Sept. 1961 3=12364
- nuclear interactions, Herceg-Novi (1962) 4=27930
- nuclear physics, April 1961 (Birmingham, England) 1=13194
- nuclear physics course, Varenna school (1961) 3=22027
- nuclear-physics, high-energy, review 3=17094
- nuclear physics instrumentation, Geneva (1962) 3=12363
- nuclear physics, low-energy, IP-PS, Harwell (1962) 2=22352
- nuclear physics, low and mean energy, Grenoble 1=12029
- nuclear physics, Manchester (1963) 4=5882
- nuclear physics, Orsay (1963) 4=11841

Conferences—contd
- nuclear physics, Rutherford Jubilee Conference 1=16610
- nuclear physics, Rutherford Jubilee Conference 3=12362
- nuclear physics, ultra-high energy, Bristol (1963), 3=12646
- nuclear radiation effects, Toronto (1963) 4=16713
- nuclear reactors, advanced gas-cooled, London (1963) 3=22444
- nuclear reactors, graphite-moderated, Bournemouth (1962) 2=16447
- nuclear reactors, physics and technique, Bucharest 1961 3=19900
- nuclear spectroscopy, Kiev (1963) 3=15090
- nuclear spectroscopy, Leningrad, Jan-Feb. 1962 3=7977
- nuclear spectroscopy, Moscow (19-27 Jan. 1960) 2=11820
- nuclear spectroscopy, Riga, Jan.-Feb. 1961 3=4286
- nuclear spectroscopy, Varenna (1960) 4=25244
- Nuclear structure, Canada(1960) 1=2153
- nuclear structure, Canada (1960) 2=1751
- nuclear system noise analysis, Gainesville (Nov. 1963) 4=19855
- numerical mathematics 1=4169
- Onsager, Providence (1962) 3=7131
- optical instruments and techniques 1=18585
- optical instruments and techniques, London (1961) 3=14308
- optical masers, Brooklyn (1963) 4=14923
- optical masers, London (1962) 3=9963
- optical materials 1=18586
- optics, six review articles 4=14374-5
- optics and spectroscopy, Jena (Nov., 1958) 1=224
- optics and spectroscopy, Jena (Nov., 1958). 1=9464
- optics and spectroscopy, Jena (1960) 2=17579
- optics and spectroscopy, Jena 1960 3=11875
- organic semiconductors 1=17676
- organic semiconductors, Chicago (April 1961) 4=22727
- paramagnetic resonance, Jerusalem (July, 1962) 3=1177
- paramagnetic resonance, Jerusalem (July 1962). 4=23040
- parity nonconservation, particle decay and strong interactions (1957) 0=9311-17
- partial differential equations and continuum mechanics 1=7966
- particle accelerators, Boston, 1963 4=24763
- particle photography, Montreal (1958) 0=2261, 17169
- particle photography, Strasbourg, (1957) 0=2260
- photoconductivity, Cornell Univ. (1960) 2=4056, 6486
- photoelasticity, Berlin (1961) 3=16557
- photoelasticity, Nottingham 1963, summary report 3=18761
- photonuclear, Karlsruhe (1960) 1=13765
- physical chemistry in aerodynamics and space flight, Pennsylvania (1959) 2=2442
- physics education, Paris (1960) 1=4228
- physics education, Paris(1960) 1=5181
- physics of polymers, Bristol(1961) 1=11587
- planets, Liège (1962) 3=13862
- plasma acceleration, 4th Lockheed Symposium 1=10694
- plasma acceleration, 4th Lockheed Symposium, Palo Alto (1959) 2=1414
- plasma and controlled nuclear fusion, Salzburg (1961) 4=5588
- plasma phenomena and meas., San Diego (1963) 4=14624
- plasma physics 1=5438
- plasma physics (Culham Lab., 1963) 4=5589
- plasma physics, Salzberg, (1961) 3=7494
- plasma physics and thermonuclear fusion, Salzburg (1961) 2=5326, 15908
- plasma, Tarrytown (1962) 3=5649
- plasma torches and furnaces, high-temp. prod., Paris (Dec. 1962) 4=24420
- plasma wave interaction and nonlinear phenomena, Pennsylvania (1963) 4=14657
- plastic crystals, Oxford (April 1960) 1=14144
- polar-cap absorption of e.m. waves, symposium 1=20943
- polymers, relaxation phenomena (Japan, 1958) 1=6449
- precipitation in alloys and metal structures, London (1958) 0=4678
- Princeton, on undergraduate curriculum S 4=18003
- profiles of stellar spectral lines 1=10388
- quantum chemistry and solid-state physics, Florida and Sanibel Island (1960-61) 2=4520
- quantum chemistry, Uppsala (1960) 1=5959
- quantum electronics, Berkeley (1961) 2=11241
- quantum field theory, problems, Lille (1957) 0=1237
- quantum mechanics, atomic and molec., Sanibel Island (1963) 4=6449

Conferences—contd
r.f. spectroscopy topics, Varenna (Aug. 1960) 4=24857
radar astronomy, San Diego (1959) 0=14382
radiation damage in solids, Varenna (Sept. 1960) 4=25976
radiation damage in solids, Venice (1962) 3=6547-8
radiation damage in solids, Venice (1962) 3=10697
radiation damage in solids, Venice (1962) 4=6888
radio star and satellite scintill., Adelaide (1963) 4=15947
radioactive tracer methodology 4=7779
radioastronomy, Colgate University, April (1961) 1=12777
radioastronomy, Paris (1958) 0=10477
radioisotopes in clinical medicine and research, Bad Gastein, Austria (1962) 2=11212
radiospectroscopy of solids, Bangor (1961) 2=4238
reactor materials and radiation damage Berkeley, England, 1962 3=12716
residual gas in electron tubes and high-vacuum systems, Como (1959) 0=19224
rupture mechanics, Southampton (April 1961) 2=8745
Rutherford Jubilee International Conference 1=19052
scintillation counter symposium, Washington (1960) 0=13702, 15057
sector-focused cyclotrons, Los Angeles (1962) 3=4227
semiconducting compounds, New York (June 1961) 1=14428
semiconducting materials, Moscow (1961) 3=13056
semiconductor applications, Southampton (1963) 4=6996
semiconductor physics, Exeter (1962) 3=6567
semiconductor physics, Prague 1960, closing speech 3=2861
semiconductor physics, Prague 1960, closing speech 3=2862
semiconductor physics, Prague 1960, summary talk 3=2860
semiconductor surfaces 1=1028
semiconductor theory, L'vov (1959) 1=3733
semiconductors (1958) 0=570
semiconductors, April 1962 3=8538
semiconductors, Exeter (July 1962) 2=23260
semiconductors, Exeter (1962) 3=6566
semiconductors, international, Prague (1960) 2=21113
semiconductors and phosphors, Garmisch (1956) 0=4324
semiconductors, physics of (Prague, Aug. 1960) 1=6131
semiconductors, Prague (1960) 1=1027
semiconductors, surface props., Moscow (1961) 4=15528
semiconductors, ultrapurification, Boston (1961) 4=23319
semiconductors, Varenna (1961) 4=20339
7th Ampere, Paris (1958) 0=19950
sferics and thunderstorm electricity, San Diego (1959) 0=16481
SiC, semicond. props., Boston (1959) 0=4365, 20715
solar radioastronomy 1=15532
solar radioastronomy 3=13916
solar system origin, New York (1962) 3=23668
solar system origin, New York (1962) 4=7961
solid state, Midwest (1960) 1=14141
solid state, Midwest (1961) 2=12359
solid state physics, Iowa (1959) 0=20713
solid state physics, Melbourne (1959) 0=6002-3, 17864
solid solns., metallic, dilute and conc. 4=10407
Solid solutions, Orsay (1962) 3=6873
solid-state devices and circuits, Philadelphia (1963) 3=14465
solid state memory and switching devices, London (1958) 0=7188
solid state Physics, Bristol, 1964 4=15394
solid state theory 3=2686
solids, chemical reactivity (Kingston, Ontario, Sept. 1959) 1=2386
sorption props., evaporated metal films, Liverpool 1963 3=25778
sound propagation in atmosphere 1=1522
space charge in dielectrics, conference report 3=4935
space exploration symposium, Washington (1959) 0=8521
Space-flight and Re-entry Trajectories 1=15571
space research discussion, London (1958) 0=8520
space science symposium, New York (1960) 0=16519
space technology, Hatfield (1962) 3=16433
space vehicles, plasma sheath, Boston, Mass. (1959) 2=2576
spark chamber symposium, Feb. 1961, Argonne National Laboratory 1=9698
spectroscopy, applied 4=5378

Conferences—contd
spectroscopy, 14th, Gor'kiĭ, 1961 3=18981
spectroscopy, Maryland (1962), report 3=3876
spectroscopy symposium, Bombay (1960) 2=13449, 17606
spectroscopy, 10th internat. colloquium Maryland (June, 1962) 3=247
spectroscopy, time-resolved, Manchester (1961) 2=1451
speech communication seminar, review of 50 papers 4=15972
stars, constitution, Lucknow (1955) 0=18847
stars, subdwarf, Pittsburgh (1960) 0=18781
stellar evolution, Royal Society discussion 1=12755
stellar spectra in far u.v., Liège (1960) 2=11142
stress analysis, Delft(1959) 1=10455
stress analysis (Delft, 1959) 1=12589
stress analysis, Delft (1959) 1=12831
stress analysis, Keele, Staffordshire, April(1960) 1=2500
strong interactions, Berkeley (1960) 1=13760
strong interactions and high-energy physics, Edinburgh (July-Aug. 1963) 4=25012
strong interactions (Univ. of California, 1960) 1=10847
superconductivity, Cambridge (1959) 0=19547
superconductivity, Hamilton (1963) 4=14507
surface forces, Moscow (1960) 3=23498
Swedish National Committee for Physics (1959) 0=12345
Swedish National Committee for Physics, Lund (1961) 2=19361
Swedish National Committee for Physics in 1963 4=24001
television engineering, London (1962) 3=21179
temperature measurement, London (1962) 3=1858
theoretical physics, Cargèse lectures (1962) 4=5001
theoretical physics, Charlottesville (Oct. 1962) 4=21719
thermal motion in crystals and molecules, Cambridge (1960) 0=21153
thermodynamics of irreversible processes, Varenna (1959) 0=16640
thermoelectricity (Inst. of Phys. and Phys. Soc., July 1961) 1=18750
thermonuclear processes, London (1959) 0=5835

Constants
adoption of universal physical constants 0=859
astronomical 4=23822
atomic, laboratory determination 0=860
atomic physics, theoretical connection 4=11009
atomic, survey 0=311
atomic constants, survey 1=787

Constants—contd

Avogadro's number 4=27595

Avogadro's number, best value, new definition of mole 0=21263

Avogadro's number det. from density and lattice consts. of single crystals 1=1677-8

"best value" selection for critical tables 1=4234

Boltzmann's constant, determination, for circuit noise meas. 1=4232

charge on electron, proton and neutron 0=9310

combination $G^9/h^3e^3c^4$, dimensional discussion 2=9141

cosmological, rel. to antisymmetric e.m. field 2=4930

cosmological implications 1=18006

dimensions (L_0) of region in which particle can be defined 1=420

in discrete 4-space 1=4237

e/m, by Hoag method, mathematical proof 0=5520

evaluation, review 1=1673-6

elementary particles, mass multiplicity 4=25051

Faraday, det. using iodine coulometer 0=21278

fine structure, from muonium and positronium data 4=25129

fine structure, non-dimensional nature 3=16486

fine structure const., non-variation with position 2=17338

fundamental particle constants and physics laws, relation 3=14926

G, e/m, e^3/hc, relationhip 0=10550

g, in muon mag. moment theory 2=3368

gravitation, Dirac hypothesis, expt. data 4=18038

gravitational, celestial mech. and abs. status 2=17340

gravity, meas., interferometric, free fall lengths 4=13762

h/e, from Cu X-ray spectrum study 2=4159

h/e, from h.f. limit of continuous X-ray spectrum 4=16605

h/e, new evaluation 0=2094

h/e, by photoelectron method 3=1575

in inertia law, Sciama-Park theory 0=14485

interrelationship 0=18899

M/L for double galaxies 3=3606

μ-meson, mass, charge and g-factor 2=3366

natural constants, derivation 2=21780

new set of values by NAS—NRC 4=11007

Planck, in general relativity theory 3=1606

Planck's constant from X-ray short-wave limit of W 1=14623

Planck's h, simple photoelec. determ. 2=4906

proton-electron mass ratio and gravit. const. 2=17

proton gyromagnetic ratio, recommended value 1=2051

review 0=18900

Rydberg, revised value 0=4925

solar system 4=13912

systematic errors 1=18240

tables, in dictionary of units 4=5004

and time scales, macro and micro, self-interaction appl. 4=2525

in unified field equations of force 0=4926

Contact angle

See Capillarity; Surface tension; Wetting.

Contact potential

adsorption of low-pressure gas, effect 2=1215

and capillary pressure 0=2157

difference meas., ionization method 4=27452

electrical contact phenomena 1=11900

electrical contacts symposium 1=11899

equilibrium of charged double layers of immersed body 0=5255

inorganic and organic semiconductors, effect of illumination 0=1626

large area scanning for variations 2=22131

liquid—junction, redox meas. 3=23546

meas., by capacitor method 2=22130

meas., vibrating electrode, all-metal, for parasitic elimination 3=16970

metal films, change during gas adsorption 3=9824

metal films, independence of film resistance 2=8268

metal—insulator—metal, barrier shape meas. 4=26136

metal—insulator—metal barriers 3=9709

metal surfaces, effect of gas discharge 1=12372

metals, rel. to capacitance and current 4=12853

metals, effect of gas discharges 2=6401

photovoltaic effect 4=30655

photovoltaic effects 0=20930-1

semiconductors, potential under metal contact, det. 1=8938

Contact potential—contd

thermodynamics, non-stationary irreversible process 0=5249

tunnel-emission devices using metal—insulator—metal 1=8962

variation during gas adsorption, meas. 0=2303

and work function, W, 311 plane, and temp. var. 3=7626

AgS films, photovoltaic effect 4=28650

Al, effect of illum. 2=8275, 10431

CdS, and chemisorption of O 4=29194

CdS evap. layers, photovoltaic barrier effect 0=20929

CdS single crystals 2=12526

CdS, variations under different conditions, meas. 1=15180

CdSe, films, light-induced changes, wavelength depend. 3=23014

Cu-Cu_2O 0=1142

Cu and Ni surfaces treated with electrolyte solutions 4=26008

Fe, surfaces cleaned in vacuum, rel. to W 0=2373

Ge, calc., from relax. time distrib. 0=7931

Ge, effect of light and elec. fields 0=1637

Ge, effect of O_2 and water vapour 0=16395

Ge, slow effect of corona discharge in air 2=2152

Ge-NaOH soln., determ. from surface cond. meas. 2=10474

Ge, rel. to O_2 and water vapour effect 4=20795

Mg, effect of illum. 2=8275, 10431

N_2, on W crystal faces 4=29199

PbS, surface, changes on illumination 3=20414

Se, pure and chlorine doped 2=8374

Si, adsorption effects of O_2 and atomic H 1=8948

Si, calc., from relax. time distrib. 0=7931

Si, immersed in electrolyte, surface cond. rel. to contact pot. 2=16713

Si, rel. to O_2 and water vapour effect 4=20795

Si p—n junction, freshly cleaved, measurements 1=1362

Si, vacuum-cleaned surfaces 1=1066

W—Nb potential difference 4=6931

Zn, effect of illum. 2=8275, 10431

ZnO, effect of O chemisorption 1=20741

ZnO—Au interface, rel. to methyl free radical adsorption 4=6992

Contact resistance

carbonized anthracite aggregates, after air oxidation 3=8545

electrical contact phenomena 1=11900

electrical contacts symposium 1=11899

graphite-Cu, thermal transients 0=7066

graphite, high press. and current effects 4=20331

liquid alloy for contacts, Hg-In-Tl 2=1371

meas., probe apparatus and results 2=1347

due to organic layer formation 0=2304

Peltier junctions in semiconductor, ohmic contacts 1=14528

pressures up to 100 000 kg/cm^2 2=21092

probe, automated, films and press. var. meas. 4=8587

relay contacts, probe meas. 2=1347

tunnelling, many-particle viewpoint 1=5395

Al—Al_2O_3—Se—Au sandwich cells, negative resistance 4=28583

C, electric-motor brushes, effect of current 4=7415

C, granular aggregates, effect of heat treatment 1=17633

CdS, ohmic and nonohmic contacts 1=14511

CdSe, ohmic and nonohmic contacts 1=14511

CdS_XCdSe_{1-x}, ohmic and nonohmic contacts 1=14511

Fe, oxide-coated surfaces 1=1017

In, transparent, to CdS 0=16364

Si, ohmic contacts to 0=595

Si, ohmic contacts to, produced by "dry friction" 0=1646

Si—Si crystals 3=10796

ZnS, ohmic contacts 3=8530

Convection

ablating heat shield, transient heat flow eqns. 2=2909

with acoustic streaming 1=4414

acoustic streaming effects 0=138

in adsorption and desorption of moisture by hygroscopic fibres 4=23597

air, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866

air, salt-induced 3=16218

air velocity, interferometric meas. 0=6986

in anisotropic layer, temp. field 1=4495

in anisotropic layer, temp. field 1=10619

anisotropic media, variational principle, least squares procedure 3=21588

in annular space, effect of eccentricity 0=5207

Convection—contd

- in annular space, influence of entry of air on coeff. 0=14871
- in annulus with inner rotating cylinder 1=249
- arcs, elec., theory 4=21492
- around arcs in nozzles, forced, theory 3=7485
- atmosphere, boundard layer, convection regions 2=12995
- atmosphere, conditionally unstable 2=8959
- atmosphere, deep and shallow, scale analysis 2=17132
- atmosphere, thermal, effect of eddy diffusion 2=15184
- atmosphere, upper, m.h.d., and aurora and mag. storms 4=26873
- atmospheric, effect of humidity 4=4760
- atmospheric, generated by moist air mass, calc. 4=7828
- atmospheric, in unstable stagnant mass 4=30930
- at benzene surface, during melting 0=12520
- binary mixtures, liquid and gaseous, effect of thermal diffusion 3=19047
- boundary conditions for heat flow, graph soln 2=11517
- boundary layer flow, forced, effect of radiation 2=15787
- boundary layer, heated, vertical, approx. soln. 4=5422
- boundary layers, turbulent, forced 3=11968
- Boussinesq approx., dissipation terms (correction) 2=17678
- buoyant fluid, isolated masses, calc. 3=5549
- buoyant, numerical simulation 2=17134
- cellular free interfacial, matter transition at fluid boundaries 3=21587
- cellular, heat transport 0=3671
- with chemical reaction, heat transfer study 1=15190
- compressible fluid, Boussinesq approx. 6=6983
- between concentric cylinders, computer calc. 3=11978
- conducting fluid flow between parallel plates 2=7437
- convection—condensation enhancement of vaporization of solids 4=24452
- cooling transients, natural convection 4=18459
- cylinder, electrically heated, transfer to fluid 4=24403
- in cylinder with graded temperatures, boundary layer 1=12849
- in diffusing fluid, numerical soln. 0=19108
- ducts, thermal entrance region, variational methods 1=18649
- earth's mantle in continental drift theory 2=6902
- earth's mantle, harmonic currents and continental drift 3=9009
- effects in saphire dissolution in ceramic systems 4=18188
- elec. conducting fluid, under mag. field, theory 2=9697
- elec. conducting fluid, between parl. vertical plates, in mag. field 0=9175
- elec. conducting fluid, from vertical plate, in mag. field 0=15123
- elec. conducting fluid, in vertical round pipe, in mag. field 0=9160
- in elec. conducting liquid, in mag. field 1=4707
- electric field effects in fluids 4=16271
- electrically conducting fluid, mag. field effect 4=21639
- electrically conducting fluid, from vertical plate, mag. field present 4=27358
- electroconvection, at semicond. fluids interface 1=2943
- in electrolytes, effect on Nernst diffusion layer 0=14637
- electrophoresis, continuous-flow, kinematic stabilization, effects 4=29224
- electrostrictive forces, effect of 4=347
- "film temperature" concept 0=14870
- flow in circular pipe, with and without heat sources 3=14397
- flow past vertical plate with suction 3=3912
- fluid boundaries, free interfacial 3=21586
- fluid, cond., unsteady, past plate 4=21640
- fluid interfaces, convection cells behaviour 2=13475-7
- fluid sphere interior, heterogeneous, compressible 4=30974
- fluids, Nusselt numbers 3=19037
- forced, rel. to form 2=9431
- forced heat transfer, correlating data 0=6985
- forced heat transfer between Cu vessel and airstream 0=8826
- forced, laminar flow in rect. ducts 0=6984
- forced, between liquid sheet and air 2=15788
- forced, from non-isothermal and isothermal surfaces to fluids 0=16677
- forced, by optical pyrometry, study 1=18657
- forced, in plane layer, in axially symmetric system 1=4494

Convection—contd

- forced, in subcooled nucleate boiling 2=19781
- forced, in surface evaporation, theory 2=19780
- forced, turbulent flow round plate 3=19036
- free, effect on flow of gases 0=14678
- free-finite-amplitude, initial-value problem 2=22080
- free and forced, in laminar flow, in circular and sector tubes 0=14872
- free and forced in vertical rectangular channels 2=15789
- free, laminar flow of elec. cond. fluid in mag. fld. 3=2114
- free, at low Prandtl-number, on isothermal vertical plate, calc. 0=19485
- free, past vertical plate 0=19484
- free, in vertical tube with temp. gradient 2=5204
- gas films in powders 3=3907
- gas-graphite suspension, flow in vertical channels, convective thermal efficiency 2=19587
- gas—liquid, theory 4=24409
- gases, flow velocity profiles meas. 3=153
- heat exchange accel, by acoustic streaming 2=22078
- heat loss from two parallel wires 2=9432
- heat transfer bibliography 3=7364
- heat transfer between coaxial cylinders in liquids and gases 0=5205
- heat transfer, effect of internal heat sources 2=19749
- heat transfer from, ice hailstones, turbulence effects 4=10716
- heat transfer by, up to near-critical conditions 4=5413
- heat transfer from thermistors, natural and forced convection together 4=27355
- heat transport in impressed magnetic field 0=3672
- heated tube in water, reduction rel. to vibrations 3=19048
- horizontal cylinder filled with water 2=2911
- from horizontal wire, in uniform fluid, flow eqns. 0=19486
- hydromagnetic heat transfer 2=15781
- influence of rotation 0=5208
- influence of roughness, artificial, two-dimensional 4=21339
- laminar flow, over linear heat source 1=6976
- laminar forced, heat transfer in non-circular duct 4=27357
- laminar, over horiz. source of heat 3=9637
- laminar natural flow in magnetohydrodynamics 2=5447
- laminar-turbulent flow transition, criterion 2=19748
- in laminary boundary layer 1=16143
- layer along vertical flat plate, turbulence transition 3=277
- line and point heat sources 3=21591
- in liquid films, flowing across wall, stability 4=2640
- liquid flow in pipes, rel. to surface roughness 4=11159
- liquid-gas mixture, forced turbulent convection rel. to heat transfer 2=1291
- liquid, incompressible, laminar with linear heat source 2=9430
- in liquid metals 2=1295
- liquid mixture instability, vertical layer under gravity 4=11155
- liquids, forced, in a bend 3=9426
- in magnetic field, exper. data on Hg 1=4710
- magnetic field and rot. effects 3=21585
- magnetohydrodynamic, vibrational instability 2=13670
- magnetohydrodynamic, vibrational instability 3=5830
- in mercury, in turbulent flow 1=4711
- natural convection film boiling, laminar two-phase boundary layer 4=8515
- natural, eqns., uniqueness theorem 1=4496
- natural, with forced lamina flow in vertical round tubes 3=103
- natural, thermal transients, electrical circuit analogue 0=12521
- nonlinear, relative stability of solns. 2=7438
- onset in incompress. fluid, theory 2=15557
- between parallel plates, 2-dimens. problem 4=29791
- penetrative, stratified fluids 2=17135
- penetrative, unstable to stable layers 3=11763
- planet and moon interiors 4=30974
- plasma conductor subject to forced convection 3=21777
- in plasma, with frozen-in mag. field, gravity instability 1=5544
- plasma, inhomog., instab. in gravity field 4=8764
- plasma, of positive column with mag. fld. 2=17833
- plasma, turbulent, in mag. field 2=15913
- plasma, weakly ionized, in nonuniform external mag. field, theory 4=11581
- plates, stationary layer, heating 3=16826
- in presence of impressed magnetic fields 1=5364
- radiating fluid layer, instability 1=2632

Convection—contd
- rotating liquid, heated from below, stability 3=16591
- with rotation or mag. field 4=11391
- in rotating pipe, with const. temp. grad. 1=8253
- shock layers, detached, radiation coupling 2=9300
- solar chromosphere, rel. to mag. field 3=9209
- in solar diffusion, outer layer dynamics 0=4889
- solar H zone, unstable modes 3=13882
- in spherical layer, nonstationary 1=6974
- stars, atmosphere, mixing depth 4=2416
- in stars, rotating early types, turbulence 1=6719
- in stars, 3-layer zones, depth-dependent temp. grad. 0=14467
- steady-state equations 4=14427
- steam—water, theory and expt. 4=24409
- in stellar atmosphere, thermally induced 1=9287
- stellar atmospheres, linear theory 2=2546
- streamlines in Bénard convection cells 0=918
- teaching demonstration, free fall, correct description of principles 4=16002
- thermal, associated damped waves 3=24084
- thermal, eqns. for thin fluid layer 3=24085
- thermal, in fluids, rigid boundary problem 4=21338
- thermal leading edges on vertical walls 3=278
- thermal, two-dim. element, shape-preserving, numerical calc. 4=16272
- thermistors in liquids, Prandtl number effect 4=27356
- thermomolecular flow, rel. to microbalance experiments 4=2506
- thermosyphon, inclined and open 1=250
- transient, in spherical cavity 1=6975
- turbulent, at arbitrary Prandtl number 3=1853
- turbulent, heat eddy diffusivity near wall 4=16273
- turbulent, mixing-length theory 3=21590
- turbulent, nonisothermal, between parallel planes 0=8620
- turbulent, in stars, spectrum 4=11392
- turbulent, in stellar envelopes 1=2633
- two-layer thermoconvective problem 4=2868
- universal equation due to localized impulse 1=16145
- unsteady, free, from vertical flat plate 4=5421
- in vertical tube, soln. of 2nd-order diff. eqn. 0=6642
- at water-air interface, effect of monomolecular layer 2=22096
- water, circulation induced by evaporative cooling 1=10481
- in water, from horizontal rotating cylinder, var. Reynolds and Prandtl numbers 4=5420
- wire, immersed in fluid, elec. heated 0=12522
- CO_2 near critical pt., laminar free convection 3=21589
- CO_2, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866
- H layer of sun 1=18076
- H_2, liquid, thermal exchange coeffs. 3=16605
- with He injection, thermodynamic coupling bet. heat and mass transfer 4=340
- He, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866
- He^3, liquid 0=3701
- Hg, heated from below and subject to rotation 0=8828
- Hg, heated and rotated in mag. field 0=2169
- Hg, overstable cellular, movement of tracers 0=8827
- Na, liquid, natural convection heat transfer 1=18658
- O liquid, boiling, in Dewar flask 1=16144

Conversion electrons
- See Beta-ray spectra, conversion electrons; Gamma-rays, internal conversion.

Cooling
- See also Joule—Thomson effect; Low temperature production; Magnetic cooling; Supercooling.
- acoustic tubular oscillator 1=205
- in air, of irradiated specimens, computer programme for calc. 4=2866
- alloys, equilibrium attainment rate 1=9152
- clouds, anomalous adiabatic 2=24019
- constant rate, semi-automatic control system 0=3687
- cooler based on Ettinghausen longit. effect, theory 3=14408
- electro-vacuum devices for u.h.f., evaporative method 2=7659
- ettingshausen, in pyrolytic graphite 3=15530
- evaporative cooling, temperature stabilization 2=7427
- gas, under compression by conducting wall 2=7430
- gas, by radiation after shock heating 4=18482

Cooling—contd
- heat transfer bibliography 3=7364
- helium, cool-down conditions, in contact with various materials 4=11436
- hot wire in subsonic flow 0=3666
- hydrogen, cool-down conditions, in contact with various materials 4=11436
- indirect, production of very low temp. 0=8966
- nitrogen, cool-down conditions, in contact with various materials 4=11436
- nuclear reactor, pebble-bed type, gas flow 1=19568
- nuclear reactors, fission, natural liquid circulation, non-stat. regimes 4=25456
- nuclear reactors by gas flow, efficiency of a fin with variable heat-transfer coeff. 0=6976
- nucleate boiling of organic coolant liquids 0=13359
- oxygen, cool-down conditions, in contact with various materials 4=11436
- Peltier cooler, response to nonsteady current 1=8301
- by Peltier effect in semiconductors 2=5210
- rapid, thermo-couple solders on quenching in water 3=7371
- refrigerating thermobattery cascades, efficiency 1=269
- refrigeration of superconducting memory for computer 0=5240
- semiconductor thermoelements, efficiency, temp. depend. 0=3733
- semiconductors, many-valley, elastocaloric effect 3=4832
- slow, from 300° to 20°K, method 4=356
- solenoid magnet with liq. N 0=7193
- solids, temp. stresses and optimal heating conditions 2=6296
- solids, vacancy coalescence and macro-defect form 0=6046
- spinning thread-line 0=6987
- temperature-time curves, applic. to thermal cond. meas. 0=5202

Copper—contd
Ar$^+$ bombarded, 10-110 keV, secondary electron emission 2=1494
arc, ionization of various element 2=15884
arc stability 1=1899
atom, electron Coulomb scatt. without excit., 50-400 keV 4=6502
atom, excited states, spin–orbit coupling 4=15270
atom, μ-meson absorption meas. 2=13837
atom, μ-mesonic, X-ray transition energies 3=6370
atom recoils from (γ,n) reaction, range 1=4858
atomic displacements near threshold 2=23168-9
atomic electron affinity, surface ionization meas. 4=18678
atomic scattering factor, from TFD eqn. 2=20733
atoms, electron radial distrib. 3=19934
atoms emitted by arc cathode, velocity 2=3019
atoms and ions, self-consist. field calcs. 3=22476
atoms, mesic, μ^- decay anomaly 3=15312
atoms, 1-10 keV, slowing down in crystals, theory 4=6891
atoms, sputtered, energy distrib. 4=24754
atoms, 20 keV electron plural scattering 4=13627
attack by shaped charges 0=21104
bending fatigue life, cross-slip effects 4=7421
bicrystals, grain-boundary sliding 1=20361
Bordoni internal friction 1=5080
Bordoni internal friction peak, l.f. measurements 1=7816
Bordoni peaks, rel. to deformation and annealing 3=23298
Born–Mayer consts., empirical determination 0=11556-7
bremsstrahlung, energy flux meas. 2=9819
bulk densities of separated isotopes 0=7835
catalytic activity, effect of α-rays 2=4563
cathode in elec. arcs 2=172
cathode sputtering, particle vel. meas., rel. to focusing energies 3=25315
Cd diffusion in, effect of additional Cd 2=21075
Cd diffusion, volume and grain-boundary 2=6383
chemisorption of gases 1=5110
chemisorption of H_2 and CO, work function, bond 0=18452
chemoemission, rel. to oxidation and reduction up to 600°C 3=2012
coalescence of pores 1=4075
coalescence of pores 1=10276
cold deformed, lattice distortion relaxation curves, X-ray reflections 3=3288
cold-drawn, room-temp. creep, under torsion and tension 4=28945
cold-rolled, thermoelec. power, 8-320°K, rel. to annealed Cu 0=1691
cold rolling, relative slip, deformation 2=10763
cold-worked, elec. cond. 0=15888
cold-worked, internal friction at low temp. 0=4559
cold-worked, stored energy release on annealing 3=11173
coldworking, effect on hardness and conductivity, electrical 3=13373
collision effects of Cu atom in lattice, machine calc. 4=28506
compressibility and velocity of sound at 0.4-3.5 × 10^6 atm 0=11974
condensation in vacuum, microheterogeneous 2=1308, 7468
cond., elec., crystal whiskers, low temp. min. 4=17478
conductivity, elec., low temp. min., effect of Sn, Fe impurities 4=20330
conductivity, elec. and thermal 2-4°K 0=15885
conductivity, electrical, wire, recovery after cold rolling at 78°K 3=20266
conductivity, thermal, crystal lattice imperfections, temp. var. 4=4002
conductivity thermal, below 1°K 4=6757
contact to CdS single crystals, electrical props. 4=12853
correl. between oxide nuclei and dislocations 0=17934
creep 0=18256
creep, "after effect" 0=16224
creep and damping capacity, influence of deformation at low temps. 4=23147
creep, effect of heat treatment 1=3979
creep and fracture 2=10760
creep at 1050°C, structural changes obs. 1=20358
creep at 1050°C, structural changes obs. 2=21435
creep of springs, effect of u.s. radiation 0=4563
critical point Grüneisen eqn. in pressure, density, int. energy 4=25849

Copper—contd
cross-slip and stacking-fault energy 3=1230
crystal dislocation relaxation peaks after deformation at 4.2°K 4=7429
crystal dislocations, rolled, electron microscope exam. 3=15493
crystal di-vacancies, migration and binding energy 3=20164
crystal electron band struct. calc. 4=17401
crystal electron band struct., from photoelectric emission 4=20242
crystal growth 4=7537
crystal growth, deformation 0=10283
crystal growth, dumbbell-shaped, preselected orientation 3=23391
crystal growth, hexagonal, by condensation of Zn 0=4595
crystal growth, with low dislocation density 4=23337
crystal growth, simple method 0=3174
crystal imperfections, interstitials, and irradiation, annealing 4=15472
crystal imperfections on n irrad., electron mic. contrast effects 4=17425
crystal interstitials in films, ion beam prod. at low energies 4=6833
crystal lattice dilation, hard-drawn fine wires 3=18212
crystal monochromator, neutron parasitic, reflection 2=3353
crystal perfection study 0=3190
crystal spheres, Kikuchi reflection diagrams 3=1292-3
crystal stacking faults, effect of diffusion annealing in H 4=20284
crystal texture transform., var. with rolling temp. 4=7481
crystal twinning, possible pole rather than dislocation model 4=7529-30
crystal whisker growth 4=13553
crystal whisker growth, platelet modification 4=17793
crystal whiskers, mechanical strength, tensile, increase on alloying with Ag 3=20727
crystalline spheres, cathode sputtering by Kr, from 1 to 10 keV 2=3097
crystalline spheres, cathode sputtering by Kr, from 1 to 10 keV 3=2051
crystallization, from liq. Bi, kinetics 0=21162
crystallographic texture variations through rolled Cu sheet 4=13638
crystals, acid cutting and polishing 1=9107
crystals, cathodic sputtering, anisotropy 4=12823
crystals, cutting by immiscible acid method 4=29072
crystals, irrad. hardening 0°C, recovery 3=20721
crystals, preferential atomic ejection directions, bombarded by Ar$^+$ ions, 40 keV 4=4095
crystals prep. with few dislocations, no substructure 4=4544
crystals, single high purity, growth 4=29049
cube-texture crystals, Rowland mechanism of secondary nucleation 0=18300
cyclotron resonance of Azbel'–Kaner type, rel. to Fermi surface 1=17483
cyclotron resonance, electron masses meas. 4=9933
cyclotron resonance at 24 kMc/s 1=17489
d-band density of states 4=12692
D-levels, cubic field splitting 0=9885
damage by electron-irrad., low-temp 3=22860
Debye temperature and specific heat 1=11165
Debye–Waller factor, 4° to 500°K 3=20082
Debye–Waller factor interpretation 4=3982
defect clusters, rel. to fission fragment irrad. 3=17803
defect self-healing at high temp., mechanism and kinetics 4=12744
defects distrib., under deformation, thermo-e.m.f. study 1=14247-8
defects, intrinsic, close-pair, energy depend. 1=17505
defects due to neutron irrad., effects of impurities on annealing 2=23164
defects prod. by plastic deformation 1=14260
deformation, latent energy 2=2321, 8733
deformation, 1.7–473°K 0=1851
deformation, in tension, energy absorption, dislocation annihilation and blocking 4=26506
deformation, three stages, unloading effects meas. 4=20654
deformed, dislocation blocks, grain growth 0=15855
deformed, dislocation density and distrib. 2=8228
deformed by filing, stacking faults, by X-ray diffr. broadening 3=20208

Copper—contd

- temp. diffuse scatt. of X-rays 0=1920-21
- tensile strain, uniaxial; elastic anelastic and plastic components 0=18238
- tensile strength, neutron irrad. effects 1=1336
- tensile strength, ultimate, rel. to high temp. and pressure 4=7418
- tensile strength, yield pt., extrusion by high-pressure liquid 4=28930
- thermal boundary resist. with He^3 and He^4 below 1°K 4=27404
- thermal capacity rel. to plastic deformation, —196° to +120°C 2=6274
- thermal conductivity 1=920
- thermal cond. by adaptation of Angström's method, 0.1 cm dia. 16 cm long wire 4=30526
- thermal conductivity determ. by Angström's method, effects of modification 4=22512
- thermal conductivity meas. of sheet 2=7436
- thermal cond., below 1°K, rel. to impurities 4=9874
- thermal conductivity, phonon and electron components separation methods 3=12930
- thermal diffusivity, capacity and conductivity, meas. by flash method 1=13006
- thermal expansion, lattice const. changes, from Bradburn—Fürth eqn. of state 4=20219
- thermal expansion, low-temp. electronic contribution 0=17901
- thermal expansion, low temp., meas. 4=20218
- thermal expansion at low temps., meas. using elec. capacitance technique 4=25862
- thermal expansion, —190°-700°C, meas. 2=19494
- thermal expansion near 10° K 1=17428
- thermal expansion, 20°-1200°K 3=17663
- thermal expansion, 30-500°C, nonlinearity with temp. 2=20940
- thermal expansion, 100°-800°K, meas. 2=12390
- thermal Gruneisen relation form, high temps., from X-ray diffr. 4=10529
- thermal lattice defects and the energy content 0=6038
- thermal vacancies, formation energy, specific resist. 1=11192

Copper—contd
thermoelec. power, explan. of positive sign 2=656
thermoelectric power, highly pure specimens, 0.1–350°K 0=20945
thermoelectricity, relative effects at low temp. for cold-working samples, theory 0=13640
thermo-e.m.f. prod. by plastic deformation 0=15999
thin film, abnormal optical absorpt. 4=22866
thin films, optical constants, rel. to heat treatment 3=13146
thin foils, X-ray spectra fine structure "melting" 3=10973
Thomas-Fermi-Dirac eqn., approx. soln. 2=20733
threshold energy to displace atom from lattice and subthreshold displacement 4=12827
time-to-fracture, constant and cyclic stresses 4=23124
time-to-rupture characteristics 1=1338
torsional-strain-cycling fatigue 4=1940
torsional strength, long-term 2=12862, 14900
trace analysis in ZnS by neutron activation 3=11371
trace element in Se, neutron activation chem. anal. 4=23692
transport, in arcs, electric, compared with Na 3=24256
transport properties, Fermi surfaces 1=8893
transverse-even voltage in high fields at 4·2° K, open orbit study 1=7623
twin formation by thermal evap. on to Cu crystal 0=4584
twinning dislocations on evaporation 0=16278
twinning, mechanical, at low temps. 2=8772
in II—VI and III—V semiconductors, as impurities, excited states 3=10810
u.s. absorption by single crystals, effect of thermal and mech. treatments 2=16599
u.v. radiation, on H impact 4=20487
unidirectional and reverse straining, recovery 4=28944
vacancies and divacs. due to electrons 2=18571
vacancies, energy of formation 2=6315
vacancies, equil. concns. meas. 3=8428
vacancies, formation energy and conc. 1=7575
vacancies, migration energy and activ. volume, model 4=12730
vacancies, properties 3=22738
vacancies, and vacancy aggregates, annealing in quenched specimens 4=12734
vacancy cluster, stability 2=12473
vacancy clustering in dislocations, internal friction meas. 3=23289
vacancy clusters 3=17707
vacancy clusters, production during cold work 0=17953
vacancy migration and binding energy 4=9944
vacancy migration, next to impurity atom, energy 2=3935
vacancy quenching, diffusion 1=960
vacancy quenching by elec. sparks 2=8204, 10378
vacancy–vacancy interaction, divacancy migration 0=17958
vacuum condensates, structure, strength 3=1366
vaporization, heat of, at 298°K 3=1876
vapour, elec. cond. calc. 2=21949
vapour, ionization by electron impact 0=14967
vapour plasma wrapped with N or Ar, contraction and emission 3=7557
vapour pressure, 1367 to 1523°K, calc. 4=27384
vibr. spectrum by Dayal's method 3=2713
vibrational spectrum and specific heat 2=16597
volume changes induced by fission 4=4094
welding, use of ultrasonics 1=10359
whisker growth, effect of electric field 1=11547
whisker growth, by H reduction of CuI 0=1888
whiskers, deformed, slip lines 1=1329
whiskers growth from halide reduction, velocity 1=15005
whiskers, growth kinks 0=18323
whiskers, growth mechanism, CuI reduction in H_2 0=18318
whiskers, growth mechanism, CuCl reduction in H_2 0=18319
whiskers, growth and strength, impurity effects 3=20726
whiskers growth by vapour reduction 3=18277
whiskers, mechanical properties 1=6481
whiskers, mechanical strength 1=20371
whiskers, prep. 0=3185
whiskers, quench softening rel. to vacancies 2=4339
whiskers, resistance, rel. to temp. 4=4116
whiskers, spiral and straight types, growth 4=13550
whiskers, tensile properties 0=18254
whiskers, tensile rupture tests 3=6801
whiskers, tensile strength 2=23778
whiskers, by vapour deposition 2=8798
wide stacking faults, due to tension strain 2=599

Copper—contd
wire, cold worked, stored energy 0=2277
wire, microwave propag. theory 2=13686
wire springs' yield points, friction theory 0=3166
wires, explosive vaporization 0=5214
wires (4-17μ diameter), crystal structure 1=10277
wires, thermal relax., rel. to current and surrounding gas pressures 2=14398
work function, effect of adsorption of H, air, and dipole moment 4=11683
work function, effect of air and H_2 4=14741
work function of single-crystal faces, temp. depend. 4=8795
work hardening under cyclic straining 3=20737
work hardening, effect of strain amplitude 1=2515
work hardening, effect of temp. and rate 1=1333
work hardening of foil 2=23763
work hardening of foil crystals 3=23344
work hardening meas. by torsion 4=28943
work hardening of monocrystals 1=12598
work hardening, n.m.r. study 2=12860, 14897
work hardening, oriented, dependence on deformation temp. 1=10213
work hardening, shear, 4.2-500° K 3=20725
X-radiation at 30 kV, ratio of Kα to white 3=25473
X-ray absorption, $CuK\beta_{2\text{-}5}$ emission 3=25474
X-ray absorption spectrum 1=7720
X-ray anomalous transmission 3=20828
X-ray atomic scatt. factor, abs. meas. 1=7433
X-ray back reflection, intensity extinction, cold-deformation 1=4086
X-ray emission spectra, M-series 3=23088
X-ray emission spectrum, $M_{\ldots,\ldots}$ intensity distrib. 1=3514
X-ray K-absorption spectrum meas. 4=17562
X-ray $K\alpha_1$ line shift from Cu to CuO 3=20499
X-ray Kossel lines, effect of lattice distortions 2=14997
X-ray line emission, ratio of indirect and direct prod. 1=14620
X-ray line profiles, effect of stress 4=23143
X-ray M-bands from Cu-Ni system 3=23087
X-ray prod., charact. L_{III} shell, due to 100-500 keV protons 4=15586
X-ray scatt. factor in perfect crystal 4=29107
X-ray scatt., low angle 3=2072
X-ray scattering from, at 90°, rel. to half-value layer 1=1954
X-ray spectra, Kα centroid wavelengths 4=15771
X-ray spectrum, absorpt., $L_{II,III}$ fine structure 4=13031
X-ray spectrum, isochromat structure rel. to electron states 2=4159
X-ray spectrum, isolated fringes 0=13470
X-ray spectrum, K absorpt. edge fine struct., from p-quasistationary states 4=13032
X-ray spectrum, Kα emission from inclined target 4=17561
X-ray spectrum, $M_{II,III}$ absorpt., valence, quasistationary states 4=13030
X-ray tube, membrane target, spectral distrib. 4=24774
X-ray yield (L), 1.5-44 A, by 1.5 MeV protons 4=17593
yield strength, ultimate, by shock disintegration 2=6746
yield stress, hardness, plasticity, rel. to grain size, block dims., microstresses 4=23138
yield stress, independence of dislocation density 2=6747
Young's modulus, change and recovery at low temp. 2=10744
Young's modulus, decrease after deformation and recovery 4=15703
Young's modulus, effect of electron irradiation 0=6294
Zn grain-boundary and latice diffusion 0=1602
zone refining apparatus 0=8170
Cu and Ag double layers on rock salt, prep. 2=19109
Cu–Bi thermocouple, mag. field effects 2=14504
Cu–CdS junction, photovoltaic effect, Cu photoemission 0=9990
Cu, Cu oxide rectifying monocryst. contacts 2=6482
Cu-graphite contacts, thermal transients 0=7066
Cu–Pb–Cu sandwiches, thermal cond. at liq. He temp. 3=24150
Cu and Pb films superimposed, superconductivity 4=16348
Cu-to-semiconductor soldered contact 0=6129
Cu^{29} in pure metal, cuprous and cupric oxides, X-ray L_{II}- and L_{III} absorpt. spectra 4=28678
Cu^{29} in Cu_2S, CuS, CuCl, CuBr and CuI, X-ray L_{II}- and L_{III} - absorpt. spectra 4=28679

Copper—contd
- Cu^{53}, nuclear quadrupole resonance in Cu$_2$O, quenching by Ag 2=14858
- Cu^{63}, nuclear magnetic resonance diffusion narrowing (<1300°K) 1=10190
- Cu^{63,65} isotope abundance determ. by sputtering 2=22925
- Cu I spectral line intensities and gf values 3=6352
- Cu I and II spectra, isotope shift 2=6094
- Cu$^+$ bombard. of Cu, sputtering ratios 0=9110
- Cu$^+$ ion, radial charge density, on statistical and Hartree–Fock theories 4=22279
- CuII wavelength standards in vacuum u.v. 0=4170
- Cu^{2+} complexes, paramag. resonance and Jahn–Teller effect 0=11943
- Cu^{2+}, in Cu(NH$_4$)$_2$Cl$_4$.2H$_2$O, e.s.r. 4=20589
- Cu^{2+} e. s. r. in CaO, Jahn—Teller effect 4=13327
- Cu III, 4p electron spin–orbit coupling 2=4276
- Cu^{2+}, line broadening of P^{31} n.m.r. absorpt. in H$_3$PO$_4$ 3=13316
- Cu^{2+}, mag. anisotropy, susceptibility 3=13224
- Cu^{++}, mag. props. in dilute systems 0=8084
- Cu^{2+}, in soln., paramag. resonance, 90° and 300°K 0=16714
- Cu^{2+} spectra, distortion in tetrahedral crystal field 4=12571
- Cu^{2+}, in ZnO and YGa garnet, absorption spectrum 1=14609
- Cu^{2+} in Zn$_2$P$_2$O$_7$, e.s.r. spectrum, phase transition study 4=26572
- Cu^{3+} in corundum, meas. 3=13300
- Cu^{3+} e.s.r. in Al$_2$O$_3$ 4=26393

Copper compounds

Tutton's salts, water of cryst., proton—proton vector orientations 4=10450
Cu, work function, effect of oxide additions 0=11710
X-ray absorption, CuK$\beta_{2.5}$ emission 3=25474
X-ray Kα_1 line shift from Cu to CuO 3=20499
$Cu_2[A^{IV}B_3^{VI}]$ type, semiconducting materials, crystal structure 3=13513
Cu acetate, aq. solns., X-ray study 1=11748
Cu acetate monohydrate, isotropic exchange integral 3=15730
Cu alloys, with Al, Si, Zn, cold worked, elec. cond. 0=15888
Cu alloys, with Cd, In, Sn, Sb, annealed, internal adsorption, elec. resistance 0=14064
Cu-alloy composites, W-fibre-reinforced, effects of alloying on room temp. tensile props. 4=30777
Cu alloys, cond., thermal, lattice, low temp., Pippard's theory 4=17362
Cu alloys, containing Bi brittle phase, dihedral angle 3=13499
Cu alloys, containing Pb, interface energy 4=20693
alloys with Cr, Mn, Fe, Co, elec. resistivity, thermoelectric 2=4081
Cu alloys damage by electron-irrad., low-temp. 3=22860
alloys, deformations rel. to stacking-fault energy 2=3924
Cu alloys, dilute binary, thermoelec. power, 8-320°K 0=10007
Cu alloys, dilute, lattice conduct. meas. 3=15450
Cu alloys, dilute, n.m.r. at low temp. 0=18225
Cu alloys, dilute, nuclear quadrupole interactions, strain contrib. 1=17389
alloys, dilute, specific heat and spin susceptibility 2=2052
Cu alloys, dilute, thermoelectric power 1=1116
Cu alloys, dilute, transport properties, 4-120°K 0=9863
Cu alloys, elec. cond., 4.2-348°K, deviations from Mattheissen's rule 0=1613
Cu alloy, internally oxidized, yielding and work-hardening 4=26509-10

Copper compounds—contd
alloys, lattice thermal cond. at liq. He temp. 2=20948
alloys, lattice thermal cond. low temps. 2=23085
Cu alloys, nucl. mag. resonance, electron distrib. around solute atoms 0=13890-1
Cu alloys, precipitation, discontinuous and continuous 4=20701
alloys stacking-fault electron scattering 3=22795
alloys, stacking-fault energies, rel. to solute atoms 3=22796
Cu alloys stacking fault fringe phenomena 4=4067
alloys, theoretical review 2=4432
Cu alloys, thermoelec. power, effect of transition metals 3=13139
Cu alloys, X-ray spectrographic study 0=13469
Cu alloys, yield point, appl. of Petch formula 4=7420
Cu amalgam, surface roughness, electrolytic meas. 2=10933
Cu—ammine complexes, NH_3 exchange with NH_4OH 2=4525
cupric ammonium Tutton salt, spin absorption 4=10242
Cu—base, in arcs, electric, from electrodes 3=24255
Cu-base binary solid solns., Hall effect, effect on scattering 4=17472
Cu-base alloys, diffusion-controlled reactions, rel. to irradiation 3=11291
Cu-base alloys, electron microscope examination 2=10958
Cu-base, interface energies 1=6522
Cu-base alloys, internally oxidized, structure 4=7616
Cu based, nuclear quadrupole resonance effects 1=9075
Cu—base alloys, quadrupolar field at Cu nucleus, origin 1=20630
Cu-base alloys, solute Knight shifts 4=17692
Cu-base alloys, yield point and Luders bands 2=23749
Cu-base solid soln., local atomic displacements 3=3341
Cu-base solid solutions, solute atoms in Suzuki atmospheres 4=23233
Cu-base solid solutions, stacking faults 2=14449
Cu^{2+} ($\alpha\alpha'$ bromo-)dipyrromethene, paramag. res. 2=4254
Cu-butyrate monohydrate, paramagnetic susceptibility rel. to temp. 1=20042
Cu chelates, N bonded, e.s.r. study 4=30471
Cu chloride dihydrate, proton resonance 0=10251
Cu complex cyanides, Raman spectra in soln., CN stretching bands 0=16706
Cu complexes, e.s.r. spectra 2=16549
Cu^{2+} complexes, ionic radii, spin—orbit coupling and geometrical stability 1=3554
Cu(II) complexes, mag. moments calc. 3=22560
Cu cyanide anions, Raman spectra 1=14036
dihalides, linear symmetrical, mean amplitudes of vibr, and Bastiansen—Morino shrinkage effect of T = 1000° 1250°K and 1500°K 4=30441
Cu dipyridine dichloride and dibromide, lattice consts., effect of size of halogen atoms 0=3257
Cu(II) dipyridyl$_2$$SO_4$, NMR spectra at 77°K 1=14795
Cu^{64} divalent cpds., use in masers 0=2436
Cu-ferrite, mag. and cryst. props. 0=3081
Cu ferrite, structure rel. to O content 2=826
Cu ferrite—chromite, distortions 1=12378
Cu ferrite-chromite, transition temp. 0=1807
Cu—ferromagnet, low temp. specific heat 4=13126
formates, hydrated, low temp. mag. props. 3=18056
cuprous halide films, optical absorption spectra 2=23563
Cu halide films, rapid prep. 0=14081
cuprous halide layers growth on Cu crystals 2=19060
Cu halides, exciton spectra, low-temp. 3=10934
halides, h.p. microscopy rel. to phase props. 4=15743
Cu halides, optical props. at low temps. 0=10029
halides, reflection and luminescence spectra at low temp. 0=16047
Cu halides, reflection spectroscopy at low temp. 1=19960
halides, solid, vapour pressure 2=7473
halides, thermal expansion at low temps., expt. 4=17369
Cu iodate and bromate, antiferromagnetism, nucl. quadrupole resonance study 1=7807
CuK Tutton salt, spin—lattice power transfer parameter 1=9066
Cu—M(M=Mn, Fe, Co, Ni, Zn, Sn, Si, Ge), Hall coeff., composition depend. 0=4319
Cu(II) monoethylenediamine chloride, e.s.r. 4=7323
$CuNH_4$ Tutton salt, spin—lattice power transfer parameter 1=9066
Cu oxide, polaron mass, meas. 1=3638
Cu oxide, 2nd exciton absorption band 1=943

Copper compounds—contd
oxide surfaces, catalytic efficiency 1=7913
Cu oxide whisker growth 3=18280
oxide whiskers, surface population det. by electron microscopy 3=13581
Cu oxides, needle growth in Cu oxidation 0=13960
Cu oxides, as seeds for ice crystals 1=1373
Cu oxides, thin film prep. and structure 4=23572
Cu phthalocyanine, elec. props. and charge carriers 4=6994
Cu phthalocyanine, electron microscope out-of-focus image 1=4089
α-Cu phthalocyanine, field effects and surface photovoltage 4=28422
Cu phthalocyanine, Hall effect and carrier mobility 3=2911
Cu phthalocyanine, photoconductivity meas. 4=10137
Cu(II) α-picolinate, NMR spectra at 77°K 1=14795
cupric potassium Tutton salt, spin absorption 4=10242
Cu(II) pyridine complexes, i.r. spectrum of thyocyanate group 3=22581
Cu(II) pyridine$_4$SO$_4$, NMR spectra at 77°K 1=14795
Cu(II) pyridine$_4$S$_2$O$_8$, NMR spectra at 77°K 1=14795
Cu−rare earth alloys, crystal structure 4=10559
Cu-rich alloys, thermal conductivity 1=920
Cu salicylate, crystal modifications, mag. different 3=23374
Cu salicylate tetrahydrate, crystal structure 0=8247
Cu salt—quinoline complexes, i.r. absorption 4=22414
Cu-stearate, paramagnetic susceptibility rel.to temp. 1=20042
Cu sulphates in glycerol, e.s.r. hyperfine structure 0=3544
sulphide layer growth in S vapour 0=13959
Cu sulphides, as seeds for ice crystals 1=1373
Cu—transition metal alloys, model 2=16675
trichloroacetate monohydrate, e.s.r. linewidth 4=26391
Cu triethylenediamine, crystal structure 2=21526
Cu Tutton salt, paramag. spin-spin interaction 2=21380
Cu—Ag(1.8-5.1%), ageing, effect of Sb, Be additions 4=13484
Cu-Ag alloy, elastic consts., effect of Pb addition 4=28964
Cu—Ag, elastic consts from u.s. velo., wedge method 3=23276
Cu-Ag, electron-irradiated, annealing 1=17512
Cu—4% Ag alloy, Hg-embrittled, fracture path, effect of precip. 4=30774
Cu—4% Ag alloy, Hg-induced crack formation and propag. 4=30775
Cu-Ag alloy, phase diagram asymmetry at 800°K 4=4504
Cu-Ag, segregation during sintering 0=18395
Cu−Ag, surface free energy, anisotropy, effect of metallic impurities and temp. 4=17373
Cu−Ag, vibr. entropies of Ag, eval. 3=12922
CuAg, emission spectrum in visible region 1=14040
Cu—Ag—Au alloys, reflection spectra, rel. to plastic deformation 4=1719
Cu—(Ag, Au), stacking-fault probabilities 4=4064
α Cu—Al, acoustical study of quench-ageing 1=12648
Cu-Al, Al segregation to stacking faults 0=21241
Cu—Al alloy, α-phase, enhanced diffusion, rel. to neutron irrad. 3=10702
Cu—Al, β' martensite, crystal structure 3=18335
Cu—Au, with Co, Fe, Mn impurities, elec. resistivity and thermoelec. power 1=11254
Cu—Al, constitution, effect of quenching 3=20868
Cu−Al containing a little Mn, paramagnetism of Mn 4=7219
Cu−Al (6%), cross slip in easy glide under tension 4=7423
Cu—Al(14.3 at.%), crystal dislocations, quenched, by electron microscopy 4=1487
Cu—Al, crystal imperfections, stacking, electron microscope obs. 4=6861
β'-Cu−12% Al, crystal structure 2=8836
Cu−Al, crystal structure of β' martensite 3=25736
Cu—Al alloy, deformation twinning, study by electron microscopy 4=26579
Cu—Al alloys, dislocation distrib. and densities 3=17753
Cu—Al, elastic limit anisotropy 3=11143
Cu−Al, explosively deformed, substruct. 4=29164
Cu−Al, faulting, effects of thermal mechanical treatments 2=8232
Cu—Al alloys, f.c.c., deformation twinning 3=17766
Cu—Al alloys, f.c.c., stacking faults 3=8442
Cu—Al alloy fission fragment damage 3=22855
Cu − Al, hardening, precipitate and dispersion 4=28948
Cu—Al alloy, internal energy changes resulting from deformation and recovery 4=13402

Copper compounds—contd
Cu—Al alloys, internal friction rel. to temp. 4=13399
Cu—0.25% Al, internally oxidized, dislocations 1=4986
Cu—11.9% Al alloys, isothermal ordering 2=23881
Cu—Al, K-edge absorption 2=6590
Cu—Al, low-temp. μ-phase (near Cu$_4$Al), structure 4=7617
Cu—Al martensites, microstruct. and crystal struct. 3=20869
Cu—Al, μ^--meson atomic capture 2=13837
Cu—Al, near solubility boundary, ordering 3=5132
Cu—Al alloy, neutron-irradiated, defects rel. to yield strength 4=20650
Cu—Al neutron irradiated, effect on electrical resistivity 1=19821
Cu—Al, new phase α_2, below $\beta \rightleftharpoons \alpha + \gamma_2$ eutectoid 4=4506
Cu—Al, ordering 2=23882
Cu—Al alloys, ordering, effect of P additions 4=1985
Cu—Al alloy, ordering, effect of quenching temp. 4=1984
Cu—Al alloy, ordering kinetics, incompleted long-range order 4=1986
Cu—Al solid solns., ordering kinetics, theory 4=7484
Cu—Al, ordering, rel. to quenching temp. 3=18349
Cu—Al alloy, ordering, vacancy formation 4=1987
Cu−Al (14·3 at.%), plastic deform. from density, hardness, cond. elec., temp. var. 4=7487
αCu—Al, primary and cross-slip lines 3=15999
Cu—Al, short-range order 4=1988
Cu—Al solid soln., short-range order, kinetics of variation 4=17747
Cu−Al, short-range order, temp. depend. 4=15723
Cu—16 at. % Al, short range structure 4=23437
α Cu—Al single crystals, microstraining 3=20706
α Cu—Al single crystals, strength, neutron irrad. effect 4=17728
Cu—14% at. Al, slip, cross, during easy glide, single crystals, no temp. var. 3=23337
Cu—Al, sp. ht., effect of heating rate and neutron irrad. 4=6741
Cu—Al, stacking faults 1=19797
Cu—Al, strengthening 3=23348
Cu—Al, thermal expansion, 30—500°C, nonlinearity with temp. 2=20940
Cu— Al alloys, time-to-rupture tests 4=28933
Cu—Al alloys, vacancy decay, internal friction meas. 2=20996
CuAl, dislocations from cyclic deformation 3=12984
CuAl$_2$(C16) crystal class, superconductivity 2=13514
CuAl$_2$, hot-hardness 2=2337
CuAl$_2$, plastic deformation, up to m.p. 3=20718
CuAl$_2$—Al, eutectic alloy, interlamellar spacing meas. 4=4650
CuAl$_2$—Al eutectic alloys, solidifcation 3=11283
Cu—Al—Mg, secondary electron emission and scatt. of electrons 0=15060, 15063
CuAlMg, MgO-coated, secondary electron emission 2=11702
Cu—Al—Ni, martensitic, boundary orientation 2=2396
Cu—Al—Ni, martensitic γ'-phase growth under external stress 2=23824
Cu—Al—Ni, martensitic transition, lattice reorientation 4=13483
Cu(78)—Al(14)—Ni(8), martensitic transform. with increased strain under stress 4=20702
Cu—As, thermal and elec. cond., effect of plastic deformation and annealing 0=21131
Cu—Au, disordered, residual elec. resist., quantum theory 4=4109
Cu—Au, elastic consts., from u.s. velo., wedge method 3=23276
Cu—Au, electrical resist. at low temp. 1=17606
Cu—Au, order-disorder transition meas. 2=17046
Cu—Au alloys, ordering, rel. to mechanical props. 3=20685
Cu—Au single crystals, stress-corrosion cracking 4=28949
Cu −Au, slip, shear, differences between ordered and disordered alloys 4=7417
CuAu, Cu$_3$Au, electron pair annihilation radiation ang. distrib. 3=17694
CuAu, internal friction, order-disorder transformation 4=26511
CuAu, lattice modulation 1=15145
CuAu I, ordering, twinning nucleation 2=6829
CuAu, order and disorder-antiphase transitions 3=8887

Copper compounds—contd
- CuAu, structure, above order—disorder transition temp. 3=3321
- CuAu II, nucleation, growth from disordered state 3=8902
- CuAu II, period, impurity effects 2=2407
- CuAu II, structure 3=8880
- CuAu II, superlattice, long-period 3=1358
- CuAu type alloys, interdiffusion, theory 4=1510
- CuAu$_3$, antiphase domains in superlattice 1=20594
- CuAu$_3$, lattice parameter and resistivity study of order 0=16342
- CuAu$_3$, ordering, X-ray study 2=4461
- Cu$_3$Au, annealed, elec. resistivity above T$_c$ 2=2110
- Cu$_3$Au, antiphase boundaries 3=18334
- Cu$_3$Au, anti-phase domains, by elec. diffr. and elec. microscopy 2=17047
- Cu$_3$Au, cold working and annealing, ordering and strength changes 4=7485
- Cu$_3$Au crystals, strained, frictional stress on dislocations 4=26507
- Cu$_3$Au, dislocation configurations and work hardening 4=17729
- Cu$_3$Au, elastic consts., ordered and disordered, 4·2–300°K 1=20294
- Cu$_3$Au, electrical resistance and electronic structure 1=11255
- Cu$_3$Au, elec. resist., short-range order effects 1=14354
- Cu$_3$Au, f.c.c., ordered, strain hardening 4=17730
- Cu$_3$Au, faulting, effect of thermal-mechanical treatments 2=8232
- Cu$_3$Au, features of recrystallization 4=1978
- Cu$_3$Au, Hall effect, influence of ordering 3=839
- Cu$_3$Au, Hall effect, plastic deformation increase 4=22669
- Cu$_3$Au, inhomogeneous ordering, anomalous resistivity 2=8848
- Cu$_3$Au, internal friction, order-disorder transformation 4=26511
- Cu$_3$Au, kinetics of ordering 3=20889
- Cu$_3$Au, local ordering at low temps. 4=26548
- Cu$_3$Au, long-range order, entropy 0=16346
- Cu$_3$Au alloy, order—disorder transformation, kinetics, two ordering processes 4=7489
- Cu$_3$Au, ordering kinetics, X-ray obs. 3=13529
- Cu$_3$Au, ordering meas. from thermoelec. data 3=25753
- Cu$_3$Au, ordering, nucleus formation and growth 4=7488
- Cu$_3$Au, ordering process from elec. data 3=3330
- Cu$_3$Au, ordering process, Hall effect data 3=3331
- Cu$_3$Au, ordering rate, effect of quenched-in vacancies 4=15732
- Cu$_3$Au, ordering, type II antiphase boundaries 4=7490
- Cu$_3$Au, plastic deformation, yield point, for interrupted deform., var. with ordering, strain 3=25623
- Cu$_3$Au, resistivity after plastic deformation 2=8273
- Cu$_3$Au, shock wave effect on props. 4=26508
- Cu$_3$Au, short- and long-range order parameters 1=1417
- Cu$_3$Au, short-range order 2=10920
- Cu$_3$Au, short-range order parameters 3=23465
- Cu$_3$Au, slip initiation and disloc. structure 2=10761
- Cu$_3$Au, sputtering with A, He and Xe 0=12645

Cu—Co, Cu—Ag, metastable alloys, preparation by vacuum evaporation 4=10422
Cu—Co, dilute, elec. resistivity 0=17996
Cu—Co alloys, dilute, ferromag. anisotropy rel. to cold rolling 2=16903
Cu—Co alloys, ferromag., magnetization-blocking process by volume development 3=1096
Cu—Co, dilute, mag. props. down to 0.08°K 3=3132
Cu—Co dilute alloys, mag. props., very low temp. 4=20540
Cu—Co, displacement spikes, neutron determ. 2=16647
Cu—2%Co, grain boundary relaxation, study by internal friction and elastic aftereffect 4=23141
Cu—Co, hardening, precipitate and dispersion 4=28948
Cu—Co, mag. anisotropy induced by cold rolling 1=10136
Cu—Co, magnetic annealing 3=13232
Cu—Co, magnetic moments rel. to ageing 1=11425
Cu—Co, magnetic studies at low temp. 0=13728
Cu—Co, molten, mag. susceptibility 1=152
Cu—(2 wt.%)Co precipitation rel. to dislocations 3=20894
Cu—3.1 wt% Co alloy, precip., electron microscope study 4=30776
Cu—3%Co alloy, precipitation hardening 3=20898
Cu—Co alloys, structure 3=8635
Cu—2·4% Co small particles, electron microscope exam. 3=1090
Cu—Co solid solutions 4=7468
$Cu_{0.05}Co_{0.05}K_2(SO_4)_2.6H_2O$, e.s.r. spectrum 0=4510
$Cu^{2+}Co_2O_4$, spinel, superexchange 4=13274
Cu—Cr (0.3%) high-strength alloy, transverse magnetoresistance 3=20274
Cu—Cr alloys, mechanical strength, increase by vacuum condensation 4=23149
Cu—Cr, molten, mag. susceptibility 1=152
Cu—Cr, —Mn, —Fe, —Co, —Ni, elec. conductivity 1=17605
Cu—Cr alloys, sintered, prep. and props. 2=15052
$CuCr_2O_4$ atomic magnetic moments, screw arrangements 1=20037
$CuCr_2O_4$, crystal distortion from Jahn—Teller effect 0=10114
$CuCr_2O_4$, high-field magnetization study 1=20146
$CuCs_2(SO_4)_2.6H_2O$, e. s. r., low temp. var. 4=23045
$CuCs_2(SO_4)_2$-$6H_2O$ spin—spin relax. and paramag. res. 2=4273
CuF_2, geometry and bonding, from deflection in elec. field 4=22378
$CuF_2.5HF.5H_2O$, e.s.r. at 9625 Mc/s 3=5038
$CuF_2.2H_2O$, antiferromag. and paramag. resonance 2=12808
$CuF_2.2H_2O$, antiferromag. props. 3=18108
CuF_2, $2H_2O$, crystal and magnetic structure 2=2396
CuF_2, $2H_2O$, crystal structure 2=2389
$CuF_2.2H_2O$ ferrimag. and antiferromag. props., 1.3-300°K 0=13839
$CuF_2.2H_2O$ single crystals, n.m.r. study 1=20255
Cu—Fe (<0.02 at.%), conductivity, elec., low temp. min., effect of Sn impurity 4=20330
Cu—Fe, dilute, elec. resistivity 0=17996
Cu—Fe, ferromag. anisotropy from cold rolling 2=21306
Cu—Fe, magnetoresistivity, He temp. 4=10026
Cu—Fe mixed whiskers, metallography 3=20796
Cu—Fe, molten, mag. susceptibility 1=152
Cu—Fe, precipitation, rel. to Mössbauer effect 3=22698
Cu—Fe, resistance to deformation, in phase transformation 1=15137
Cu—Fe system, sintered, interphase energies 4=20789
Cu—Fe, sintered, U.T.S. temp. depend. 0=1866

Copper compounds—contd
Cu—Fe, specific heat and elec. resistance 1=17413
Cu—Fe, two-ion system, paramag. relax. 0=10222
Cu—Fe whiskers, tensile strength 4=7419
Cu—Fe—Ni, mag. props., heat treatment effects 1=3886
Cu—Fe—Ni., sintered, internal friction, temp. depend. 1=9083
$CuFe_2O_4$, cubic—tetragonal phase transform. 3=11205
$CuFe_2O_4$, influence of Mn_3O_4 on cubic spinel structure 1=15094
$CuFeS_2$, antiferromagnetic props. 1=11458
$CuFeS_2$, elec. props. meas. 2=18888
$CuFeS_2$, elec. props. —140 to 300°C 0=7938
$CuFeS_2$, magnetic, electrical props. 1=19872
$CuFeS_2$ mag. & elec. props. 3=1027
$CuFeS_2$, magnetic structure 0=3101
$CuFeS_2$, spin waves, dispersion relation 4=13261
$CuFe_2S_3$, polymorphic transition and mag. props. 3=11049
Cu_5FeS_4, structures of two polymorphic forms 4=23438
Cu—Ga, lattice spacings and stability 0=16314
Cu—Ga, sp. ht., effect of heating rate and neutron irrad. 4=6741
Cu—Ga, type of stacking faults 3=12993
Cu-Ge, band structure, from low-temp. i.r. absorption 1=1156
Cu—Ge containing a little Mn, paramagnetism of Mn 4=7219
Cu—Ge, crystal imperfections, stacking, electron microscope obs. 4=6861
Cu—Ge alloy, growth, tensile deformation modes and yield phenomena 4=7422
Cu—Ge, lattice spacings and stability 0=16314
Cu—Ge single crystals, dislocation damping 4=23150
Cu—Ge, stacking fault energy 3=12986
Cu—Ge alloys, stacking faults 3=22797
α Cu—Ge alloys, stacking and twinning faults 4=28473
Cu—Ge supersaturated soln., Cu segregation along As-grown dislocn. 4=29007
$CuGe_2P_3$, solubility of Ge, X-ray, thermal obs. 4=4496
Cu_2XY_3, (X = Ge or Sn; Y = S, Se or Te), ordering and superstructure 4=2066
Cu—Ge—Si, stacking fault energy 3=12986
Cu—Ge—Si, ζ-phase, lattice spacings 1=2538
$Cu(HCO_2)_2.4H_2O$, mag. props. 3=15780
CuI, absorption edge, pressure effects, to 140 kbars 1=8986
CuI, anomalous absorption at critical thickness 2=689
γ—CuI, crystal structure 3=20835
CuI, edge luminescence, excitation curves, 77°K 4=1768
CuI, exciton, absorpt. and refl. spectra 3=4975
CuI, exciton lines, crystallite size effects 4=26187
CuI, exciton spectra, rel. to crystal size 4=4245
CuI, exciton spectra at 4.2°K 3=2765
CuI films on alkali halide 0=20847
CuI, films, electron diffraction study, hexag. mod., elec. cond. 1=20536
CuI films, exciton absorpt. bands, 82°K 3=20473
CuI films on polycarbonate, 1/f noise 4=26050
CuI films, semiconducting 2=23379
CuI, oxygen-controlled elec. conduct 3=13071
CuI, photoelectric emission 0=15055
CuI, photoluminescence, at low temps. 0=21000
CuI, spectrum, transition props., arc meas. 4=25498
CuI vapour, ionic thermal dissociation, temp. variation 1=14112
$[Cu(IO_6)_2]^{7-}$ complex, crystal structure 2=824
$CuIO_3(OH)$, salesite, crystal structure 3=1338
Cu—In, age hardening 4=4461

radio source catalogue for −50° to −80° decl. 2=4858
radio source distrib., rel. to steady-state theory 2=2570
radio source problems 0=18653
radio source synchrotron radiation 1=18200
radio source 3C278, identification with two galaxies 1=5171
radio sources 1=15566
radio sources and clusters of galaxies 2=7039
radio sources at 159 Mc/s, survey 0=829
radio sources at 178 Mc/s, survey 0=830
radio-star emission at 223 and 456 Mc/s, rel. to ionospheric obs. 2=17160
radio star envelopes, mass and dimensions 4=13969
radio star fadeouts on phase-switching interferometer records 3=11602
radio star scintillation and absorption 0=14275
radio star scintillations rel. to auroral and magnetic activity 3=11603
radio star scintillations rel. to auroral mag. activity 4=4952-3
radio star scintillation, near auroral zone 4=15948
radio-star scintillations, correl. with geomag. disturbances 1=21100
radio star scintillation correl. with ionization movements in atmos. 0=12162
radio star scintillation, effect of line-on-sight aurora 0=16465
radio-star scintillations, effect of mag. storms 2=13184
radio star scintillation, influence of E region on Martyn's model 0=12185
radio-star scintillations, ionosphere diffraction 2=9405
radio star scintillation, rel. to ionospheric diffraction 4=13840
radio star scintillation, spread F correl. 0=12184
radio star scintillation, spread F and transequatorial scatter 0=16475
radio star scintillation, theory 0=10412
radio-star scintillations at 1390, 79 Mc/s 2=21646
radiostars, scintillations, variation with zenith angle 3=21124
radio star spectra 0=18661
radio stars, angular size 4=2465
radio-stars, number–flux density relation 2=2569
redshifts of quasi-stellar radio sources 3C47 and 3C147 4=17987
review and interpretation 1=8012
rich clusters of galaxies as radiosources 4=29489
Sagittarius A, continuum at 22 cm 1=2665
Sagittarius A as Galactic centre 0=18658
Sagittarius A, high resolving power study 0=10483
Sagittarius A, 9.1 cm obs. 3=9278
Sgr A at 21cm 3=16430
Saturn, microwave spectrum 3=5274
Saturn, 3.45 cm emission 1=8018
scattering by solar corona 0=18648
scintillation, and ionosphere spread-F echoes 4=4817
scintillation of radio signals from satellites 0=12211
scintillation of radio-source, ionospheric effects 3=13713
scintillations of sources rel. to geomag. activity 3=16423
search for advanced communities in other galaxies 0=12247
self-absorption at 21 cm by galactic H, near supernova remnant 1=4219
17 intense radio sources, positions 1=18180
75 and 22 cm surveys for thermal and non-thermal sources 1=18196
shell sources, intense, mechanisms 2=24185
six intense sources, 1390 Mc/s, linear polariz. 3=9277
source catalogue, for declinations +10° to −20° 0=4869
source counting in steady-state cosmology 3=9254
source counts rel. to flux densities 3=11605
source counts, Sciama's model, new evidence for extragalactic nature 4=10930
source counts, rel. to steady-state theory 3=25989
source distrib., review 3=22223
source identifications by lunar occultation 4=26973
source with marked spectral curvature 4=2466
source positions, 112, precision meas. 3=9274
source positions, surface density of galaxies 2=4860
sources, brightness, power law sign change, and absorption 4=13970
sources, catalogue -20° to -60°, 75 cm, 21 cm, 11 cm 4=30989

Cosmic radiations, radiofrequency—contd
- sources, distrib. and classification 1=18197
- sources, fan-beam obs., 21cm 4=30988
- sources, galaxies, superstars, protostars, review 4=15962
- sources, intensity, time variations 4=26963
- sources as intergalactic collisions 0=14386
- sources of low flux density, 1400 and 612 Mc/s 4=15959
- sources, Nançay interferometer obs. 1=18136
- sources, nature and structure 0=10481
- sources, new list (3 C) compilation, at 159 Mc/s 1=18135
- sources, position and diameters from lunar occultation 4=26972
- sources, small and distant 4=13904
- sources, surveys, uncertainties due to confusion 1=18134
- sources, unusual, and cosmic ray origin 4=17960
- spatial brightness distrib., Fourier transform, interferometer study 0=3
- spectra of 160 discrete sources 3=13930
- spectral index of galactic emission 1=18192
- Sputnik III, 1958δ_2, information 0=14477
- star scintillations, rel. to ionospheric spread-F echoes 4=10762
- star, UV Ceti, bursts, combined optical and radio obs. 4=26969
- stars, flare, emission possibility 2=2565
- stars, identification with optical objects 2=19353
- strong emission, origin in large stars 3=9255
- strong radio sources, galactic contraction theory 3=9258
- strong sources, 1427 Mc/s, brightness distribs. 0=18663
- strong sources, rel. to massive star collapse 4=10811
- Sun, corona, occulation of Crab nebula, 18 cm 4=23950
- sun, short-duration bursts 0=18641
- supernova remnant IC 443, 8000 Mc/s 4=4954
- supernova remnants, 13 sources, at 960 Mc/s 2=13183
- supernovae explosions as radio sources 1=15563
- supernovae, shells and filaments, rel. to cosmic rays 2=1022
- surface brightness of sources, interpretation 2=13186
- survey article 1=12780
- survey at Bangalore (India) 1=18137
- survey of localized sources at 92 Mc/s 1=2667
- survey at 960 Mc/s, extra-galactic sources 1=4222
- survey of sources at 408 Mc/s 3=13931
- Sydney radio source survey catalogue 3=5268
- synchrotron, rel. to electron energy distrib. 2=2556
- synchrotron radiation, polarization, mag. field structure 2=24183
- Taurus A, diffraction in solar corona 0=14430
- Taurus A, flux at 3200 Mc/s 0=18670
- Tau A, 1.2 cm 4=13959
- Taurus A, 9.1 cm obs. 3=9278
- Taurus A radio source, occultation, extrapolation of corona data 0=4897
- Taurus A, second source, width, 8.5mm 4=13957
- Taurus, mm-wave source 2=13182
- Taurus–Orion region, neutral hydrogen study, at 21 cm 0=4906
- test for continuous creation theory 0=14380
- 13 new shell sources, identification 4=4955
- 38 Mc/s galactic survey 0=18677
- 3.5 m, from local supergalaxies 0=6564
- 3.5 m, longitude distrib., from disk of galaxy 2=1016
- 3C48 source, association with a star 2=19353
- 3C 48 red-shift 3=13932
- 3C212 source position, method of lunar occultations 2=24182
- 3C 273 source investigation by lunar occultation method 3=13937
- 3C 273, super-luminous, light var. 3=23699
- 3C273, 21cm absorption 4=4957
- 3C392 source, spherical shell, shape, supernova remnant theory 1=2663
- 384 sources at 159 Mc/s, interferometry 3=7051
- three component source with well aligned field 4=23954
- transfer, in ionized medium, stimulated transitions, negative absorption 0=4962
- 21cm, near centre of Galaxy, rel. to H$_\alpha$ emission 1=4209
- 21 cm line profiles, catalogue 4=29482
- 21cm observation, smoothing effects, theory 3=13917
- 21 cm study of kinematics of local gas system 1=7978
- 21 cm survey, intepretation rel. to galactic velocity model 2=11167

Cosmic radiations, radiofrequency—contd
- 21cm, survey using multi-channel receiver 4=4934
- 24.3 Mc/s, anomalous winter absorption 0=18489
- 25 Mc/s noise at Ahmedabad, India 1=6653
- 27.5 Mc/s, during solar eclipse 2=1004
- type III solar emission, 11.4 m wavelength, high-resolution studies 3=21125
- type IV bursts, correl. with enhanced ionization in polar ionosphere 0=14223
- type IV radiation, from solar flares covering sunspots 3=21126
- Uranus, 26.3 Mc/s 3=5272
- v.l.f., origins 3=13730
- various sources, 20, 30, 50 and 100 Mc/s 0=8483
- Vela–Puppis region, using Mills Cross telescope 0=4864
- Venus, apparent radio radiation at 11 m 0=10479
- Venus, 4 mm emission 2=24171
- Venus, 4.3 mm, brightness temp. 3=11592
- Venus, at 4-33 mm, brightness temp. 2=17304
- Venus, 8 mm 3=5273
- Venus, 8 mm bandwidth emissions 2=1011
- Venus, 8.6 mm, brightness temp. 3=11591
- Venus, 440 Mc/s, correl. with solar 20 cm flux 3=5276
- Venus and Jupiter, at 3.3 cm 3=9271
- Venus, microwave absorption and emission, brightness temp. 0=16535
- Venus, microwave, and plasma instabilities 3=11595
- Venus, microwave radn. rel. to atmospheric parts 2=17305
- Venus, microwave temperature 2=4747
- Venus near superior conjunction, 10 cm obs. 3=5275
- Venus, temp. study 0=8473
- Venus, at 13 and 21 cm, brightness temp. 3=25983
- Venus, 26.3 Mc/s 3=5272
- Virgo A, 9.1 cm obs. 3=9278
- Virgo A source, polarization of 21 cm emission 1=4221
- young sources, nonthermal emission, spectra, nonstationarity 2=24184
- Zeeman splitting, rel. to galactic magnetic field meas. 4=7990
- H, intensity distrib. and radial velocity, 21 cm survey 4=20948
- H, interstellar, theory 0=10485
- H, neutral, in solar neighbourhood 4=29480
- H, neutral, λ=21 cm survey 1=18201
- H, neutral, in Orion region 1=18010
- H 21 cm line, gravitational red shift, Galactic potl. meas. 0=18911
- H, 21 cm, Zeeman splitting rel. to Galaxy mag. field 4=7954-5
- H I clouds in galactic spiral arms, 21 cm study 1=18009
- H I survey at high galactic latitudes 1=18012
- H I survey near galactic plane 1=18011
- H II clouds 1=15568
- H II regions, Strömgren spheres emission 0=4862
- H$_2^+$ ions, monochromatic radio-emission 2=1019
- OH absorpt. 4=20949-50
- OH absorpt. towards Sagittarius A 4=23946
- OH, ground-state Λ-doubling transitions, lab. observation, rel. to interstellar detection 0=1534

Cosmic rays
- absorption of high-energy nucleons in atmosphere 1=3291
- acceleration by earth's mag. dipole field 1=7947
- acceleration, during galactic evolution 1=3332
- acceleration by hydromagnetic wave, calc. for Galaxy spiral arm and Crab Nebula 0=13075
- acceleration in magnetic field 3=4252

harmonic analysis, standard errors 1=10947
heating of interstellar hydrogen 1=6693-5
heavy nuclei, galactic, relative abundances 2=12060
high-energy nuclear-active particle interactions, study methods 1=3265
high-energy nuclear collisions, models, asymmetry effects 1=3429
high-energy particles, scintillator interactions meas. 4=967
high energy soft component near sea level 1=9790
history 2=329
intensity, energy spectrum along meteorite path 2=4751
intensity, meteorite calc. 0=6579
intensity from Na^{22} content of meteorite "Breitscheid" 1=9260
interactions of 200 BeV particles 1=3267
interplanetary space, radiation environment 2=9053
jets, analysis 1=5800

Cosmic rays—contd
jets in photographic emulsions, ang. distrib. of particles 1=3262
low energy polar cap absorption detection 0=12257
low-energy solar particles, motion in earth's field 1=13594
low-energy, rel. to type IV solar outbursts 3=23705
magnetic separation of auroral particles 1=6636
measurement, meteorological corrs., averaging intervals 4=25226
measurements by third Soviet cosmic rocket 1=4815
measurements by third Soviet cosmic rocket 1=10939
meson decay probability change due to Coulomb scattering 1=3199
meteor irradiation, exposure age from Cl^{36} decay 1=9266
and meteorite ages 1=9263-5
meteorological effects on data, theory of second order effects 1=3338
momentum spectra, acceleration, by magnetic pumping 1=2143
motion in dipole mag. field, theory 3=473
motion in solar magnetic field 0=14408
motion, theory of acceleration of particles by radiation 2=20283
μ-mesons, pair production at 8-120 BeV 0=2531
multiple particle production, effect of viscosity on energy distribution 1=3276
multiple particle production, hydrodynamical theories, analysis 1=3277
neutrino radiation 0=5631
neutrinos 3=24686
neutrinos, data from intensity meas. deep underground 4=6164
neutrinos, problem of detection 3=4527
neutrinos, prod. of upward μ flux in atmosph. 4=3519
neutrons, collision mean free path in lead 1=8460
1959 solar events, Helsinki symposium 1=7988
Nov. 1960 events 1=13586
nuclear-active particle spectra at mountain heights 3=22237
nuclear component, rocket study 2=20475
nuclei, energy and latitude distrib. meas. 3=2343
nuclei, energy-spectra, space vehicle meas. 3=22229
nuclei, heavy, correl. with chomospheric flare 3=22230
nuclei, heavy, flux increase rel. to solar flare 3=2333
nuclei, prod. by collision with H in space 3=619
nucleon component, logarithmic repr. of variation 2=18208
nucleon—nucleon collision asymmetry 1=3270
nucleon—nucleon interactions, impact parameter 1=3170
nucleon—nucleon interactions, jets from carbon 1=3266
optics, Störmers problem, modification of adelphic integral method 4=26833
origin from M-dwarf emission stars, theory 1=9781
origin, review 3=22223
outer radiation belt, mag. field meas. 1=3306
particle motion in dipole mag. field, equatorial plane 2=7717
particle motion in geomag. field, first integral 4=5753
particle multiple production by 10^{10}-10^{13} eV interactions with emulsion nuclei 1=3260
particles, propagation associated with solar flares 0=20278
path-length rel. to galactic magnetic field, open model 2=9105
peripheral collisions 1=3269
phase anticipation in trains of diurnal oscillations 3=4481
photographic emulsion response to showers, plural-multiple theory agreement 1=3259
Pioneer V measurements 0=17453
polar cap riometer obs. (Nov. 1960) 2=12025
primaries, non-relativistic, heavy, identification 1=567
primaries, relativistic, heavy, charge by δ-ray counting 1=565
primaries, relativistic, heavy, charge by photometric method 1=564
primaries, $Z > 8$, abundance 1=566
primary, composition, lateral distrib., spectrum, review 3=22223
primary energy spectrum, discontinuity 1=2142
primary—secondary relation, revision of Dorman's coupling consts. 2=16258

Cosmic rays—contd

    - NaI, whole-body, calibration 2=15421
    - NaI, in whole-body γ-ray counter, use of anticoincidence ring 2=15422
    - NaI:Tl, calibration, γ-rays from proton resonances 2=5605
    - NaI:Tl, conversion efficiency 2=11923
    - NaI(Tl) crystal, low-energy neutron detection 1=513
    - NaI : Tl crystal, photofraction, 0.32-2.76 MeV 3=19604
    - NaI:Tl, decay time meas. 3=10005
    - NaI:Tl, distortions in γ-rays meas. 2=3211
    - NaI:Tl dosimeters in radiation surveys 3=2170
    - NaI:Tl, efficiency meas., var γ energy 4=24945
    - NaI:Tl, energy resolution, activator, distrib. depend 2=8588
    - NaI:Tl, energy resolution, rel. to dislocation density 2=18001
    - NaI:Tl, finite solid angle corrections 3=14823
    - NaI : Tl, γ-ray photofractions, intrinsic efficiencies 3=19605
    - NaI:Tl, γ-ray response 0=16102
    - NaI:Tl, γ-ray response 2=5519
    - NaI:Tl, internal conversion coeff. meas. to ±0.5% 0=13202
    - NaI:Tl, intrinsic line broadening for γ-rays 2=5521
    - NaI : Tl, iterative response correction of data 1=7173
    - NaI:Tl, linewidth depend. on integration time const. 3=14822
    - NaI : Tl, neutron absolute spectral responses 4=14966
    - NaI:Tl, non-proportional response 2=11827
    - NaI (Tl) and plastic, characteristics 1=19058
    - NaI:Tl, pulse-height response calc. 2=9736
    - NaI:Tl, resolution for γ-rays 2=5520
    - NaI:Tl, response to energetic heavy ions 0=11788
    - NaI:Tl, response for γ-rays up to 11 MeV 3=6670
    - NaI:Tl, response to monoenergetic neutrons 0=17355
    - NaI:Tl, response to X-rays 2=22480
    - NaI:Tl, response to X-rays and low-energy γ-rays 2=18000
    - NaI:Tl, "self-scintillation" study of Rb^{87} 2=3510
    - NaI:Tl, surrounded by plastic phosphor, reduction of Compton contrib. 2=3201
    - NaI:Tl, 3 × 3 in. well-type, calc. efficiencies 3=10002
    - NaI(Tl) well crystals, efficiencies and photofractions 1=13221
    - NaI : Tl well type, abs. photopeak efficiency 4=16851
    - NaNO$_2$:Tl, polarization of low-temp. luminescence. 2=715
    - Pb sandwich, for e detection, 1-10 GeV 3=17105
    - for Pr^{147} meas. 4=25353
    - for T, liquid, review 4=15178
    - T, liquid scintillation counting in suspensions 4=10681
    - for T, liquid, water content and counting efficiency 4=22058
    - Xe, various u.v. radiation converters for 2=1626
    - ZnS films, on Mylar, for α-rays 1=560
    - ZnS monitors 0=5456
    - ZnS : Ag crystals, parameters 4=21699
    - ZnS(Ag) detection of neutron and photon induced fission in U and Th cpds. 1=2247
    - ZnS:Ag, for fast neutrons 2=296
    - ZnS:Ag phosphor, Dy, Sm, Gd, B loaded, neutron detn. 2=20361
  - **semiconductor**
    - (subheading introduced in 1963).
    - for all nuclear radiations, review 3=12375
    - α and β, 20 and 15 keV resolution 4=5889
    - α-particle detect. when large higher energy proton background 3=4478
    - α-particles, Si diffused-junction detector 3=4479
    - α ray, Si p−n junction 4=9014
    - α-ray spectrometer, 21 keV resolving power 4=21967
    - α spectra meas., Am^{241} 4=3252
    - angular distrib. meas. with two detectors 4=16745
    - barrier-film, review 4=3250
    - for β-ray spectroscopy 3=19616
    - calibration using fission of Cf^{252} 4=6389
    - for charged particle distrib. obs. in aurorae 4=17930
    - effect of n, α and fission fragment bombardment 4=14971
    - as fission fragment detector 3=15244
    - fission fragment energy and time-of-flight meas. system 4=28077
    - fission fragments, multiplication phenomena, gold surface barrier 3=19509
    - fission product meas., U^{235} 4=3252
    - for γ, pulsed, Si n−p, n−i−p 4=21831

- **Counters**—contd
  - **semiconductor**—contd

Counting circuits—contd
Kandiah discriminator monitor circuit 0=3910
kicksorter using ADC, new address logic 3=24197
kicksorter, multidimensional, magnetic store transistor 2=9495
kicksorter, two-dimensional, with magnetic storage 1=8291
linear adding circuit, γ-ray spectrometer 3=576
linear gate, 10-100 mμsec duration 1=1879
linear ratemeter, automatic range-chaning 0=17175
for low rates, recording 4=16753
magnetic storage device 1=7176
mass-marker for mass spectrometer 0=12800
millimicrosecond discriminator 0=2472
modular circuitry and instrumentation 2=17992
monostable systems, triggered at random 4=30117
multichannel analyser, ang. correl. meas. 3=4372
multichannel analyser, information retrieval 3=14497
multichannel analyser spectra, least-square convergence improvement 4=11862
multichannel analyser, for 2-parameter pulse-height analysis 4=30123
multichannel analysers, rel. to digital computers 4=11861
multichannel analysers, for high counting rates 2=7535
multichannel analysers for space research 3=19144
multichannel analysers, storage in decimal notation 2=11588
multichannel scintillation-counter expts. 2=2986
multicoincidence and anticoincidence cct., nanosecond, transistorized 4=30127
multidetector array, method of use 3=5610
multidimensional analysis 2=18333, 19844
multifold coincidence-veto, 50 nsec range 2=5268
multiparameter analysers, use in nuclear physics 3=24187
multiparameter pulse-height analysers 4=22054
multiparameter analyser, two-dim. 4=21704
multiple coincidence 0=16960
multiple-coincidence, for scintillation counters, transistorized 1=2936
multiple coincidence, scintillation gonimeter for ang. correl. meas. 0=17142
multiple event analyser 1=1869
multiple fast coincidence unit 0=17186
multiple pulse display system 3=9707
multipliers, fast analogue, with field-effect transistors 4=14975
(n,γ) sum-coincidence spectrometer 1=16740
nanosecond pulse height discriminator 3=24196
nanosecond pulses, peak voltmeter 2=11582
nanosecond techniques, survey 2=17746
nsec. time-to-pulse-height converter, mV-pulses 3=12052
nanosecond transistor coincidence circuit 1=1875
nanosecond vernier analyser 0=17195
neurophysiological research, gating system for photographic printout of counts 0=12216
neutron detector, pulse transformer design 4=9228
neutron identification cct, for scintillation studies 3=14489
neutron intensity monitor, full equipment 1=2116
neutron spectrometer time analyser, mμsec. 3=3984
neutron time-of-flight spectrometer 1=11891
for neutrons, rapid anode potential recovery 1=19217
non-overload amplifier for γ-spectroscopy 0=2473
nuclear data processing, trends, review 2=9728
nuclear data storage, high-speed system 2=9494
nuclear electronics, internat. symposium, Paris (1963) 4=11843
nuclear electrons symposium 0=12719
nuclear emulsion automatic examination, with television raster 4=790
nuclear experiments, automatic testing applic. 2=17749
nuclear reactor period meter, time response during startup transients, computer calc. 3=12742
nucleonic instrumentation 0=19962
one-channel amplitude analyser 3=12054
1 Mc/s scaler 3=354
oscilloscope for mμsec pulses at 30 Mc/s repetition rate 0=3710
oscilloscope, pulse sampling 0=17199
oscilloscope system, multi-channel, for bubble chambers 3=19141
p—i—n junction detector, RC network pulse shaping 4=27720
particle identification system 2=9506

Counting circuits—contd
for particles analysed by magnet 2=3194
periodic integrator for rapid variations of counting rate 3=7414
for phoswich scintillation counter 2=1370
photomultiplier—amplifiers of scintillation counters, stabilization of amplification 3=3983
photomultiplier, for low-energy γ-rays 2=18096
photomultiplier, noise pulses, photocathode-to-first dynode voltage effect 2=22133
photomultiplier output state 3=24185
photomultiplier pulse, detailed analysis 2=5266
photomultiplier, time characteristics 2=1485
pile-up rejection circuits 2=2982
pion photoproduction meas. 0=3996
for plastic scintillators, pulse shape discrimination 1=3078
for position detector, for space research 2=18105
pre-amplifier, low-noise charge-sensitive, for semiconductor detector 4=3251
preamplifier for proportional counters 0=3905
preamplifier for scintillation counter 4=16737
preamplifier for semiconductor 4=27723
printout system, for pulse-height analyser 2=7783
programme for 2-dim. pulse-height analyser 4=30125
proportional counting, transistor amplifier 0=19998
pulse amplifier, automatically gain coltrolled 3=12049
pulse amplifier, gain 1580, risetime 3 nsec 4=8594
pulse amplifier, nanosec. 3=24180
pulse amplifier, noise, discriminator bias 3=16891
pulse amplifiers, signal-to-noise ratio calc. 1=7010
pulse-amplitude analyser, multichannel 3=14496
pulse amplitude analyser, transistorized one-channel 4=21706
pulse amplitude discriminator, low level 4=3259
pulse analyzer, nuclear, linear selection memory 3=24198
pulse analyser for scintillation counter calibration 4=5902
pulse analysing system, for gridded ionization chamber 2=9505
pulse analysis, 2-dimens., address systems 2=497
pulse counter 2=1361
pulse counter, phase comparator 2=7539
pulse counters and scalers, new circuits 0=17172
pulse density meter, transistorized 2=1355
pulse discrim. for high γ-background 3=16892
pulse discriminator restorer, threshold pot. maintenance at high rates 4=778
pulse encoder, fast 3=19152
pulse-frequency dividers 0=17200
pulse frequency meter, instantaneous, for random pulses 2=5281
pulse generator, for bursts of pulses 3=24193
pulse generator, mμsec, appl. to scintillation counting 1=5409
pulse generator and mixer 0=17171
pulse generator, nanosec. 3=24192
pulse generator for semiconductor transient analysis 3=24194
pulse-height analyser 2=1357
pulse-height analyzer, adaptation circuit for neurophysiological obs. 4=23956
pulse-height analyser and amplifier for X-ray scintillation counter 1=4542
pulse-height analyser, applications 2=19843
pulse height analyser automatic live time measurement 1=18737
pulse-height analyser, with automatic recording 2=1359
pulse height analyser, for c.r.t. displayed pulses 1=2934
pulse-height analyser, charge-storage 0=17181
pulse-height analyser, counting losses 2=1358
pulse-height analyser, developments 2=19842
pulse-height analyser, eight-dimensional 4=21708
pulse height analyser encoder 3=16893
pulse-height analyser, fast 0=17178
pulse-height analyser, 50 channel 3=19142
pulse-height analyser, 5-channel, transistorized 3=12055
pulse height analyser for fine detail 3=19154
pulse-height analyser, 49-channel, wide-range 2=5288
pulse-height analyser, Hutchinson-Scarrott, dead-space elimination 2=9501
pulse-height analyser, logarithmic 2=22139
pulse-height analyser, logarithmic, with const. % error 0=20002

Counting circuits—contd
pulse height analyzer, mV threshold triggers 4=16760
pulse-height analyser, multichannel 2=11587
pulse-height analyser, multichannel, based on chart recorder 3=3988
pulse-height analyser, multichannel, dead-time correction 2=5285
pulse-height analyser, multichannel, fast storage system 0=17201
pulse-height analyser, multichannel, "grey wedge" type 2=20178
pulse-height analyser, multichannel, with mag. drum memory 3=21686
pulse-height analyser, multichannel, mag. drum memory 3=21687
pulse-height analyser, multichannel punched tape readout 0=20003
pulse-height analyser, nerve impulses 2=17756
pulse height analyzer, 100 channel 4=16758
pulse-height analyser, with output on punched cards 4=30126
pulse-height analyser, with photog. recording of c.r.o. screen 4=30122
pulse-height analyser, for scintillation counting 2=1359
pulse-height analyser, single-channel 0=317
pulse-height analyser, single-channel 2=9512
pulse-height analyser, single-channel, electronic scanning 2=11585
pulse height analyser, single channel, registration errors with mean value meas. 3=14495
pulse-height analyser, single channel, transistorized 2=9504, 19847
pulse-height analyser, Soviet AIMA-2 1=16229
pulse-height analyser, "stripper" meas. 2=9511
pulse-height analyser, "stripper" meas. instrument for threshold and channel width variation 2=9511
pulse-height analyser, 10 channel 0=17177
pulse-height analyser, transistorized 2=2970
pulse height analyser using tunnel diodes 4=16759
pulse-height analyser, 20-channel 2=2973
pulse-height analyser, 20 000-channel 2=9496
pulse-height analyser, 256-channel, linearized bottom channels 0=17180
pulse-height analyser, 256-channel, using parametron logic 3=352
pulse-height analyser, two-parameter multichannel 4=21707
pulse height analysers, continuous spectra, matrix method analysis 3=2235
pulse-height analysers, 0.1μsec gate circuit 3=12053
pulse-height analyses of simultaneous pulses 2=19848
pulse-height analysis, analogue-to-digital converters 4=21711
pulse-height analysis, multichannel, review 2=17745
pulse height discriminator using distributed amplification 1=18735
pulse-height discriminator, fast 2=2974, 7540
pulse height discriminator, redundant 4=14982
pulse-height discriminator, and shaper, low jitter 2=5271
pulse-height discriminator, and shaper, using tunnel diodes 2=5276
pulse-height discriminator, transistorized 2=22141
pulse-height discriminator, using tunnel diodes 2=5275, 19846
pulse-height discriminator, univibrator 2=2975
pulse height discriminator, voltage sensitive tunnel diode 3=24189
pulse-height distribution, automatic recording 2=15870
pulse-height encoder for high input rates 3=14494
pulse height indicator, transistorized 1=16230
pulse-height measurement 2=19849
pulse-height recording from large number of counters 3=3986
pulse-height recording system, 25-input 3=3987
pulse-height selection aid 3=14493
pulse-height selector 0=3907
pulse height shift determination of liquid scintillation efficiency 1=13217
pulse height spectra, resolution distortion correction 4=21839
pulse-height spectroscopy, cathode-ray tubes 2=2972
pulse-height spectroscopy, high-resoln. 4=14981

Counting circuits—contd
pulse-height and time analysers, multichannel, critical comparison 1=4546
pulse-height-time selection, for neutron interaction studies 2=7988
pulse lengthener for multichannel analysers, for nsec pulses 1=5410
pulse measurement time definition few nsec 2=2983
pulse multiplier 2=9509
pulse multiplier, Hall-effect based, for charged particle analysis 4=777
pulse pile-up rejector using tunnel diodes 4=14979
pulse resolver, using tunnel diodes 2=17752
pulse shape discrimination, neutrons and γ-rays 0=19990
pulse shape discrimination in an organic phosphor, for fast neutron time-of-flight technique 1=5734
pulse shape discrimination, particle identification 0=3909
pulse-shape discriminator, amplitude insensitive 2=5278
pulse-shape discriminator, fast 2=5272
pulse-shape discriminator; survey 2=17747
pulse-shape discriminator, with thermal noise, filter 2=15869
pulse shapes, for fast coincidence stages 0=17187
pulse shaping circuit, adjustable threshold 2=5283
pulse spectrum, average amplitude 3=19153
pulse timing method for fast coincidence work 0=17197
pulse transformers, nsec, applications 3=5607
pulse voltage dividing, applied to fission fragment mass distrib. 4=14980
pulses, high speed decade 4=27724
quenching circuits, for Geiger counters 2=11589, 20181
radiation instrumentation for space probes 0=15184
radioactive dating, background suppression 3=24538
random pulses, time and height analysing methods 1=5407
ratemeter, transistorized 0=1280, 21402
ratemeter, valve voltmeter 0=17174
ratio ratemeter 3=5606
readout device, for amplitude and time analysers 2=22143
recording device, multiparametric 4=19324
recording device, 128-channel 0=3883
relay unit MST-2 for radiation detector, transistorized 4=5903
reversible, using dekatrons OG-5 3=5904
scalar, decade 4=16756
scalar, decade, transistorized 4=16755
scaler, decade, transistorized 10 Mc/s 4=14978
scalar, decimal, transistorized 4=9019
scalars, 25 Mc/s, print-punch, for accelerators 3=19140
scale-of-two, high speed, transistorized 0=17192
scaler, 11 mμsec dead time 0=19999
scaler, high-speed using tunnel diodes 0=12803
scaler, multiple input, with central core memory 4=27725
scaler, 100 Mc/s 0=17193
scaler, pulse loss due to dead time 0=20001
scaler, simple core type 0=20000
scaler, transistorized, for decimal counting 3=351
scalers, dekatron 2=1354, 17753
scalers, high resolution 2=11591
scalers, high-speed storage type 3=24183
scalers, for pulses accelerators 2=2981
scaling circuit, fast 3=14492
scaling circuit, using tunnel diode 3=3985
scaling, 0.15 and 1 μsec resolution 4=16754
for scintillation counters, testing by simulated particle beam 1=13224
scintillation intensity time dependence by delayed-coincidence method 1=13223
scintillation spectrometer automatic control 1=1878
selective storage, in multichannel pulse-height analyser 2=2971
Si junction detector, optimization of performance 3=7415
for slow scintillation counter 0=2460
in space vehicles 1=1982
spark chamber, two-electrode, large gap, triggering circuit 4=788
spark counters, Rosenblum, influence in parameters 3=24544
speech, quantized analyses, automatic recording 2=7059
stabilizing circuit for scintillation spectrometer 1=18734
stretcher for short counter pulses 0=20006
for subcritical homogeneous suspension reactor, instrumentation 0=13382

Counting circuits—contd
subtraction system with memory cathode-ray tube 1=1866
sum-coincidence method for γ-ray spectrometry 0=17279
sum-coincidence spectrometer, stabilization 3=5979
sum coincidence technique, for total internal conversion coeffs. 2=16368
synchro-cyclotron pulse simulator 0=19858
systems with variable dead time, losses 4=27726
three-channel low-background unit 1=19054
three-dimensional analyser, digital recording on mag. tape 1=2935
three-parameter multichannel recorder-analyser, for nuclear events 2=1364
time-to-amplitude converter 1=1880
time-to-amplitude converter 2=11586
time to amplitude converter 4=3258
time-to-amplitude converter derived from Bell cct. 1=18740
time-to-amplitude converter, fast, for γ-ray resolution curve 1=16226
time-to-amplitude converter, for γ-γ coincs. 2=9500
time-to-amplitude converter, 0.1—10 nsec range 1=16227
time-to-amplitude converter, with simult. random coincidence substraction 4=30129
time—to—amplitude converter, transistorized 3=24184
time-to-amplitude converter, transistorized 4=30121, 30124
time-to-amplitude converters, mμsec 2=15872, 19859
time analyser, differential output distortion 0=17183
time analyser, matrical, with capacitive memory distributors 4=780
time analyser, for measuring metastable state half-lives 0=17184
time analyser, multichannel 0=9250
time analyser, nanosecond, solid-state 4=30118
time analyser, nsec range, amplitude corrected 2=19845
time analyser, single-channel, for synchrotron 0=7181
time analyser, single-channel, for $\sim 10^{-9}$ sec 0=19995
time analyser, 20-channel, for neutron time-of-flight anal. 1=4541
time analyser, 256-channel, with memory unit for neutron spectrometer 4=779
time-analyzer, 1024 channel, for neutron meas. 4=16911
time converter based on cathode-ray tube 3=14498
time-delay and pulse-height analyser, 20-channel 0=3906
time-of-flight analyser, 1000-channel 0=19996
time-of-flight single channel analyser for nanosecond region 1=5412
time-of-flight, sub nsec. 3=12051
time-of-flight "time expander" circuit 1=2069
time-to-height conversion system, 10 psec-200 μsec 4=5899
time-to-height converter for neutron time-of-flight meas. 2930
time interval coding 0=5466
time interval expander, capacitive 3=24186
time intervals and resolving times meas. 3=7175
time-to-pulse height converter 4=21710
time-to-pulse-height convertor, fast 3=19150
time-to-pulse-height convertor $\sim 10^{-12}$ sec resolution 4=9020
time-to-pulse-height convertor, transistorized 0=19993
time-to-pulse height convertor, wide range 0=2471
time resolving scintillation counter output 0=17139
timing slow pulses for fast coincidence meas. 4=3255
timing of scintillation pulses 0=17191
timing system, 100 Mc/s, digital 4=30116
toroidal pulse discharge neutrons, recording 2=19868
transients in logarithmic count-rate and period meters 1=4545
transistor amplifier with 2 nsec risetime 4=27450
transistor circuit modules 2=5269
transistor pulse amplifier, input stage 1=1870
transistor trigger circuits for EZ-10 counters 1=1877
transistorized, 8.5 nsec resolving time 3=9708
transistorized instrumentation system, modular 4=3257
transistors in avalanche mode, for discriminators and pulse generators 0=20008
Triga reactors, counting-rate channel 1=18733
trigger circuits, increased sensitivity 0=17194
trigger feed for pair of GM counters 1=8292

Counting circuits—contd
trigger, using tunnel diodes 2=2977
triple coincidence device 1=7008
two-dimensional pulse-height analyser 1=1868
2-pulse amplitude simultaneous recording, for even fission fragments 4=1118
universal unit based on decatrons 3=1915
weak radioactive sample testing 0=11328
White cathode follower, transient analysis 0=7052
to Zeta, 1958 modification 0=5838

glass, reversible cracks 2=12867, 19013
glass, size, effect on strength, calc. 4=28952
glass surfaces, etching 3=11314
glass, velocity of growth 2=21445
glass, velocity of growth 3=3243
glow discharges penetration, expt. 2=9550
on grain boundaries during creep 3=3227
growth, early, field emission microscope obs. 4=7393
growth, stressed bodies 3=23329
hair-line cracks, formation, stress effects, presence of H_2 3=3241
hard substances, development, variational principle 4=23109
hydrodynamic formulation, development of cracks under pressure, theory 4=23110
in ice plates, formed by thermal shock 4=1947
initiation meas., acoustic, record pickup 4=15697
ionic crystals, dislocation generation 3=13383
metal, propag. in liquid metal environment 3=11185
metal tubes, eddy-current testing method, non-ferromagnetic specimens 4=26487
metals, f.c.c., microcracks 4=23160
metals, f.c.c., propagation 4=4452
metals, fatigue crack propagation modes and physical features 4=13382
metals, fatigue growth, forking and division 4=7392
metals, fatigue in torsion, mechanism 3=13335
metals, fatigue, microstructural damage 3=20735
metals, fatigued, theory 3=20746
metals, initial cavitation damage 2=19108
metals, pure, under high-stress fatigue 4=7394
metals, rupturing under tension 2=23783
moving cracks, velocity behaviour 2=8749
penny-shaped, axially symm. stress distrib. 2=6726
photoelastic materials and glass, growth, rel. to compression 3=23363
plane crack, in elastic body, stress distrib. 3=18216
plastic relaxation, dislocation model 4=20634
polymethylmethacrylate, surface, thermal healing 4=7446
polymethylmethacrylate, theory 4=13439
propagation, cinematographic study 3=3242
propagation, double-cantilever cleavage mode 4=13386

Cracks—contd
propagation, effect of gaseous environment 4=4451
propagation of elliptical Griffith cracks for plane stress 4=30757
propagation, leading to fracture, rel. to dislocations 2=10769
propag. model in brittle materials 3=13381
propagation, nonstationary 3=18215
propagation, plastic instability theory 4=28927
propagation in sheet under tension 3=21275
propagation speed and dynamic stresses 4=26489
propag. velos., instantaneous, meas. method, for electrically conducting materials 3=13382
Rebinder effect, liquids in fine cracks, effect on mech. props. 4=23111
silicide layers on Mo, influence of stresses 4=7704
steel, effect of H adsorption 2=14908
steel, hair-line crack formation, stress effects 3=3241
steel, mild, propagation velocity meas. 2=14909
steel, movement, effects of fracture temp. and heat treatment 4=10385
steel, propagation, dynamic fracture 3=3242
steels, carbon, crack propag., fracture 2=23788
steels, intergranular propagation 4=26529
submicrocracks, propagating stress, surface-active media 2=21444
thermal cycling cracks, fatigue invest. 2=23794
thermal stresses, crack in semi-infinite solid 3=9382
velocity, max., and surface energy, specific 4=4453
velocity oscs., brittle wedging 4=13384
in vitreous polymers, refractive index meas. 3=8579
Al alloy, formation, effect of atmospheric humidity 4=23125
Al alloy 24S-T, fatigue-crack propag. 3=3244
Al alloys, fatigued, two-stage mechanism 3=20741
Al, fatigue growth, reduction by metal fragments 4=7403
Al, density change, during thermal stress 2=10772
Al, fatigue crack propagation, mechanism 2=12868, 23789
Al, fatigue cracks, autoradiography 2=19015
Al, fractures, obs. by electron microscope 3=8782
Al sheets, toughness, and tearing 4=20642
Al–Mg, microfractographic character 2=8748
Al_2O_3, films, on Al 4=15815
Al–Zn–Mg, stress-corrosion life 2=16968
Al–Zn–Mg, torsion fatigue prod. 4=23127
Be, inclusions, behaviour under pressure 2=16969
BeO, cracking due to neutron damage, effect of microstructure 4=6896
Bi single crystals, kinetics of growth 4=20648
CaF_2, surface-cracks due to wear 3=11189
Cd, crack growth, in presence of Ga 3=20757
Cr, at twin–grain boundary intersections 4=23136
Cr–V, rel. to strain, 200°–600°C 2=8771
Cu, Cu–Zn, fatigue, cross-slip effects on propagation 4=7421
Cu, fatigue-crack propag. 3=3244
Cu, intergranular cracks caused by introduction of H_2 at high press. 4=13430
Cu–4% Ag alloy, Hg-induced crack formation and propag. 4=30775
Cu–Au single crystals, stress-corrosion cracking 4=28949
Fe, Armco and pure, microcracks 4=23160
Fe, deformed at –196°C, microcrack formation 4=20719
Fe–3% Si, cleavage cracks, anisotropic growth 4=10384
Fe–Si (3%), micro, propagn., temp. and strain effects 4=28961
Fe–Si(3%), on plastic deformation, nucleation, and brittleness 4=13412
Fe–Si single crystals, propagation obs. 3=13379
Ge, cleaved surfaces, tear marks 3=23382
Ge, indented, ring and radial cracks 3=20758
Ge, {111} surface 2=8759
Ge surfaces, abraded 3=12981
KCl, cleavage surface energy rel. to crack length 3=25178
LiF, compressed, anisotropic microcrack growth 4=10390
LiF, growth, rel. to triboluminescence 4=26243
Mg and Mg alloys, fatigued in push/pull 4=1954
MgO bicrystals, deformed under 3-point bending, crack nucleation 4=10391
MgO, bicrystals, formation by blocked glide band 4=13423
MgO, cleavage cracks propagation 4=4556
MgO, fracture nucleation, after thermal shock 2=6753
MgO, microcracks, growth mechanism 2=8752

Cracks—contd
MgO, nucleation in compressed bicrystals 2=6754
Mg–Zr(0.5 wt.%), grain boundaries, in traces of moisture, in reactors 4=20667
Mn^{56}, two stage facility design 4=30322
Mo, brittle, nucleation on twin and grain boundaries 3=6803
Mo single crystals, causing fracture 4=13428
Mo, at twin–grain boundary intersections 4=23136
NaCl, crack front process 2=21579
NaCl crystals, caused by impact treatment 4=30787
Nb, surface, rel. to gas embrittlement 3=20755
Ni, intergranular cracks caused by introduction of H_2 at high press. 4=13430
Ni, propagation in fatigue fracture 2=23789
Ni, wires, hydrogen supersat., elec. resist. 2=23236
Ni–Cr, creep fracture 3=3239
Ni–Fe films, rel. to magnetization 3=20595
Si, as origin of dislocations 3=5064
Si, single crystals, electron microscope exam. 3=23360
Sn, crack growth, in presence of Ga 3=20757
TiC–WC–Co alloys, rel. to ultimate tensile strength 4=26532
U, on annealing following irradiation 4=12835
U, by post-irrad. thermal cycling 2=8751
U–Mo alloys, during tensile tests 4=20686
UO_2, effect of neutron irrad. 4=22653
UO_2, sintered, microfractographic obs. 3=3240
W, at twin–grain boundary intersections 4=23136
WC–Co alloys, rel. to ultimate tensile strength 4=26532
Zn, crack growth, in presence of Ga and Hg 3=20757
Zn, effect of Hg on initiation process 4=13451
Zn, fatigued by direct stress 4=7466
Zn, due to locally applied drop of Hg or Ga development 4=7465
Zn, under low temp. thermal cycling 2=23776
Zn, under low temp. thermal cycling 3=3233
Zn, microcracks due to pyramid and basal slip 3=2797

Creation of electron pairs
See Electron pairs.

Creep
See also Slip.
activation energy, anelastic solids 3=8769
activation energy, temp. depend. 4=26477
activation energy, theory and expt. 4=28922
alloys, Nimonic 80A type, creep cracking 1=1341
b.c.c. metals, high-temp. model 4=13455
bar, idealized, rel. to buckling 2=17384
beam, primary creep rel. to total deformation 2=10759

cylinders in torsion 1=11513
cylindrical boundary deformation 4=24126
deformation mechanisms, temp. and stress dependence 0=4564
dependence on fatigue stress durations 1=20356
dislocation creep rate over Peierls barrier, model 4=17718
EI-4378 alloy, adsorbed liq. Na effect 4=23185
energy dissipation surfaces 2=14893
extrapolation, scatter of creep data 3=23331
fatigue damage accumulation at high temp. 3=20745
ferrites, rel. to hysteresis loops 3=8688
ferrosilicon, rel. to substructure 3=18192
fissile materials, rel. to swelling 4=9609
fracture, in creep 1=3992
fracture, in creep 1=9095
glass fibre epoxy resin laminate, compliance–orientation variation 4=28951
glass, rel. to viscosity meas. 4=4682
grain boundary migration, in temp. gradient 0=17948
grain-boundary sliding and cavities 2=18995
grain-size effects, metal under tension 2=19000
graphite, reactor-radiation induced 4=28955

Creep—contd
graphite, at temps. up to 3000°C 0=16218
graphite, transient, and recovery, theory 3=18196
high polymer solids, creep strain recovery 1=20346
high polymers 1=14882
high-temperature, activation energy from stress law 2=4326
hollow square crystals, rel. to Bloch wall motion 3=13248
ice beams, under repeated loading 3=8770
ice, cracking activity 0=16237
inductance bridge meas. 0=3482
isothermal creep curves at different stresses, obtained from strain meas. of tapered specimen 4=30752
as limiting case of eqn. of state 2=3851, 8178
logarithmic rate law 2=14891
magnetic film domain walls, mechanisms 4=13157
magnetic films under transverse mag. pulses 4=7247
Magnox AL80 3=8771
materials, for high temp. studies 4=26474
measurement, 20-293°K, apparatus for metals 1=9077
mechanism, in soft mechanical testing machines 1=14892
metal tubes, apparatus with programme facilities 3=18188
metals, activation energies 0=6041
metals, activation energy and volume modifications 3=5067
metals and alloys, internal friction data 4=7372
metals and alloys, single crystals, kinetics to high temp. 4=7440
metals, during deformation, rel. to surface tension 4=10361
metals, rel. to diffusion 1=3980-3
metals, effect of surface conditions 2=8742
metals. f.c.c. 0=18256
metals, f.c.c., effect of neutron irrad., theory 3=1228
metals, at high temp. under combined loads 2=14890
metals, high temp., dislocation motion theory 3=23329
metals, high-temp. theory 2=18997
metals, kinetics, high-temperature 3=18191
metals, at low temps. 0=19577
metals, mechanical model 2=12839
metals, modulus effect on temp. depend. of activation energy at high temp. 4=15693
metals and plastics, stresses, from eqn. of state 3=8761
metals, polycrystalline, resistance at high temps. 2=8739
metals, rate rel. to lifetime of metal under load 1=6461
metals, under simple shear, formulae 1=10218
metals, in simple shear, meas. 1=1326
metals, study 1=20389
metals, $t^{1/3}$ law 3=6794
metals, temperature after-effect, vacancy mechanism 4=26475
metals, transient irradiation creep 3=20717
metals, void formation and failure 4=1916
model, logarithmic, rel. to recovery 3=23330
Nimonic 80A, relaxation creep 4=23190
non-stationary, methods of soln. 2=14892
non-steady membrane creep of circular plates 0=13911
notched specimens, by photoelasticity 4=7378
Nylon 66 unoriented filaments 4=4653
phase transform. effects, order–disorder 4=26519
photoelastic materials 4=2624
pivots and plates, stability 2=1098, 7151
plastic yielding in anelasticity 1=14890
plates and shells with small displacements, unsteady 4=7384
plates, thin, annular 2=14889
poly(bisphenol-A carbonate), above glass transition temp. 4=4687
polycrystals, boundary-diffusion controlled, model 3=15997
polycrystals, stationary, velocity 1=10222
polycrystals, stationary, velocity 1=11518
polymers, amorphous, at high stress 0=16217
polymethyl methacrylate, β-relax., and stress relaxation, activation energies, theory 4=28922
polytetrafluoroethylene, −100° - 180°C 4=28975
power law 0=11975
principle of minimum complementary energy 3=92
pure metal, effect of voids and theory 1=20357
quartz strands 4=13447
recovery effects in total strain theory 4=7383
relaxation 0=6309

Creep—contd
resilient materials, dynamic method of measurement 0=18235
review 3=25626
rocksalt at low temperatures 0=18255
rupture, phenomenological theory, necking effects 2=4342
rutile, steady-state, 1050°-1325°K, activ. energy 4=13442
S.A.P., activation energy and volume 4=20643
silicon iron, effect of initial substructure 4=23170
slip strain estimation during creep 4=26476
steel. 1=6462

transient creep, dislocation mechanism 4=4445
transient creep, and frequency response of material 1=20314
twinned layers 0=1861
uranium, α-phase 2=12927
variational equation 4=15692
viscoelastic materials, creep and relax. contraction ratio 4=23094
rel. to viscosity and compliance estimation 3=25636
void nucleation during creep 3=3227
wedge indentation, into semiplane 3=3228
Ag, depend. on O content 3=13363
AgBr, theory, rel. to defect mobility and density 2=3952
Al 3=18213
Al alloys, heat resisting, micro-obs. 2=6739
Al bicrystals, and grain boundary struct. 4=20641
Al, in bicrystals, structural changes 2=21434
Al, dislocation arrangements due to tensile stresses 3=20754
Al, effects of crystal stress orientation, temp. 3=11161
Al, grain boundary displacement 0=13912
Al, meas., in vacuo, high temp., induction heat source 4=26496
Al, mosaic block disorientation 3=10682
Al, polycrystalline, creep processes 0=16216
Al, polycrystalline, effect of stress and recovery 4=13391
Al, rupture, intercryst. fissures 2=19011
Al single crystals, influence of mosaic structure 4=7405
Al, sintered powder 2=16961
Al, and stress relax. and internal friction, activation energies 4=28922
Al, subgrain misorientation during formation 1=1323
Al, and time to rupture under load, high temps. 4=7439
Al, rel. to ultrasonic attenuation 1=1324
Al—4% Cu alloy, effect on ageing reactions, kinetics 4=23249
Al–4% Cu alloy, metallography of deformation 4=28934
Al–Li alloys, strain-induced diffusion and precipitation 2=4469
Al—Mg alloy, fatigue-activated, 120°-170°C 3=13365
Al—Mg alloys, with plastic deformation 3=3226
Al_2O_3, boundary-diffusion controlled 3=15997
Al_2O_3, rel. to electrical resistivity 3=17868
Al_2O_3, pore-free, creep behaviour 1=7826
Al_2O_3 single crystal 0=8120
Au 3=18213
Au, at high temp. 2=18999
Au, polycryst., high-temp. 4=28953
Au–Ni alloys, at high temp. 2=18999
BeO, dense 2=3845
Cd, low-temp., dislocation theory explanation 2=2326
Cd, pressure depend. 3=25630
Cd, under simple shear 3=13366
Co, β-phase, control by energy barriers 3=11162
Co—Ni—Nb alloys 3=20724
Cu 0=18256
Cu 2=10760
Cu 3=18213
Cu, cold-drawn, room-temp, under torsion and tension 4=28945
Cu, diffusion creep "after effect" 0=16224
Cu, effect of heat treatment 1=3979
Cu, grain boundary voids, growth under stress 0=21142
Cu, high-temp., dislocation config. 3=12978
Cu, high-temp. intercrystalline cracking 0=18278
Cu, influence of deformation at low temps. 4=23147

Creep—contd
Cu, mechanism, rel. to mechanical relax. 4=4460
Cu, at 1050°C, structural changes during creep 1=20358
Cu, at 1050°C, structural changes during creep 2=21435
Cu springs, effect of u.s. radiation 0=4563
Cu–Ni system at 700-1150°C 3=15996
Fe, diffusion creep rate, at sub-melting temp. 4=23164
Fe, high temp. 4=26514
αFe, incubation creep effect 4=1946
Fe, low C content 3=23335
Fe, low C content, transient creeps 3=15992
α-Fe, at low temp. 4=17731
Fe, at low temps., meas. 3=18193
Fe, rel. to precipitates, 550°-700°C 3=18189
Fe, rupture 2=4342
Fe, subgrain changes during creep 1=14893
Fe, and time to rupture under load, high temps. 4=7439
Fe–Al alloys, activation energy 3=15995
Fe–Al alloys, reptation and bascule effect 2=4333
Fe–Al, reptation and bascule effect 3=1229
Fe–C alloys, at high temps. 2=23761
Fe–C alloys, at high temps. 3=6791
Fe–Cu alloys, at high temps. 2=23761
Fe–Cu alloys, at high temps 3=6791
Fe–N alloys, creep resistance, enhancement by Mn addition 4=28957
Fe–Ni solid solution single crystals, at high temp. 1=10212
Fe-Ni-Cr-Co, cold deformation effects 0=6312
Ge, in bending, time depend. 0=13913
Ge, rel. to dislocation motion model 2=10754
Ge, flow stress, temp. depend., analysis 1=14896
Ge, in torsion and bending, theory 0=13914
InSb, rel. to dislocation motion model 2=10754
KCl crystals near m.p. under small loads 4=1961
Mg, deformed, grain-boundary cavities 2=16998
Mg–Al alloy, deformation mechanisms 2=18996
Mg–Al–Be alloy, intergrain cavities 2=19098
Mg–Cd alloy 3=8772
Mg–Cd, system, order–disorder transform effects 4=26519
MgO, electric field increase 4=7433
MgO, high-temp. steady-state rate 3=15998
Mg-Zr alloy, creep strength rel. to heat treatment 4=28965
Mg–Zr alloy, at 400°-450°C in CO_2 4=30782
Mg–1/2 wt. % Zr alloy, rel. to grain boundary 3=16116
Mg–Zr alloy, intergrain cavities 2=19098
Mg-Zr alloy ZA, at 400° and 450°C in CO_2 3=25629
Mg-Zr homogenized alloy, Zr hydride precipitation 4=30872
Mg–Zr, reduction by heat treatment in H_2 3=25763
Mn–Mg alloy, compressive creep deformation, effect of grain size 4=30781
$MnNi_3$, rate rel. to equilib. state, 450°C 3=6790
NaCl crystals near m.p. under small loads 4=1961
NaCl, rel. to electrical conductivity at high temp. 1=10034
NaCl, 500°-750°C, temp. and stress depend. 4=4488
NaCl, rel. to mosaic block structure 3=20209
Nb, compression, 800°-1200°C 3=13362
Nb, at low temps. 4=28972
Nb–V and Nb–Zr alloys 2=4330
Ni 2=10760
Ni, effect of polygonization, 550°, 700° and 900°C 3=20715
Ni, effect of prior strain and polygonization 4=7441
Ni, effect of substructure 2=21433
Ni, failure grain boundary cracking 3=18195
Ni, 500°C, compressive prestrain effect 3=13361
Ni, 500°-600°C, effect of impurities 3=25631
Ni, at high temp. 2=18999
Ni, high-temp. intercrystalline cracking 0=18278
Ni, after low temp. deformations 2=16959-60, 18998, 21432
Ni, part not revealed structurally, mech. 3=18194
Ni, Ni–Au and Ni–Ag, comparison at 500° and 600°C 4=23184
Ni, 700°C, effect of previous deformation at 4.2° and 300°K 4=13429
Ni single crystals, temp. and stress depend. 3=20716
Ni, structural changes 1=14895
Ni, temp. and stress effects on deformation components 4=23182
Ni, and time to rupture under load, high temps. 4=7439
Ni–(Al, Co) 3=23332

Creep—contd
Ni–Au alloy, effect of cold work 2=16962
Ni–Cr, activation energy, creep fracture 3=3239
Ni–Cu alloys 2=10760
Ni–Cu alloys, shear and diffusion deformation 2=23760
Ni–Fe magnetic films, domain wall, temp. var. 4=13201
Ni_3Fe alloy, anomaly, explanation 3=23336
Ni–Sn, alloy tertiary creep, rel. to stress concn. 2=12857
Ni–Sn solid solutions, unstable 2=4328
P, white, rel. to pressure 4=15712
Pb, high-temp. steady-state, effect of pressure 1=14894
Pb, pressure depend. 3=23333
Pb, under simple shear 1=10218
Pb, $t^{1/3}$ law 3=6794
Sn, near melting point 1=1325
Sn, pressure depend. 3=23334
U, activation energy temp. var. 4=23224
U, α-phase, activation energies rel. to temp. 2=12856
U, α-phase, thermal cycling 0=13570
U, α-phase, volume increases during irradiation 0=9721
U, effect of irradiation on creep 1=11514
U, effect of irradiation growth, thermal cycling 2=4332
U, 550°C, tensile stress of 350 psi 3=25633
U, irrad. creep, mechanism 3=2795
α-U, thermal cycling during creep, incremental collapse 3=8908
U carbides 4=13611
UC, compressive, meas. 4=23225
UO_2, non-stoichiometric 3=25632
UO_2, stoichiometric 3=8773
Zn, additional strain due to temp. variation 4=10405
Zn, heat cycling effects 4=13452
Zn monocrystals, in air and under Sn layer 0=6311
Zn, nonelastic strain recovery 3=8776
Zn, polycrystalline, anomalous activating energy 3=18190
Zn, pressure depend. 3=25630
Zn, rapid after-effect analysis 3=18197
Zn single crystals, fatigue-induced after-effect 1=20360
Zn whiskers, basal-plane dislocations 1=1327
Zr, meas. under 4-26 kg/cm^2 at high temps. 4=13455
Zr–H–U alloy, temp., stress depend. 2=4329
Critical constants, thermal
acetic acid–water–butane, 3 coexisting phases 4=24442
alkali halides, fused 2=19542
alkali metal vapours, effect of dimerization 4=21366
alkali metals, crit. parameters 2=17691
binary liquid mixtures, critical opalescence 2=17450
binary mixtures, gas–liquid, crit. temp. 4=369
binary systems, fluctuations and opalescence, theory 4=8525
bomb apparatus, with windows and thermostat 1=13020
C_v, gravitational effects in meas. near critical point 4=14468
co-existence curve and compressibility curve near critical point 3=3786
and condensation theory, metastable state 3=21634
correlations at critical point 2=13326
critical isothermal degree 4=27390
critical mixtures, absorption and dispersion of sound 2=13336
critical mixtures, heat capacity theory 2=13325
critical mixtures of polar liquids, dielec. props. 4=29639
critical mixtures, thermodynamics 2=21897
critical mixtures, viscosity 2=2681
critical opalescence, free energy, and density correlations 0=19093
critical point density fluctuations, theory 2=5218
critical point of simple fluid 0=19096
crystal lattice statistics, 7 models 3=12910
density, according to single phase region data 4=21365
density fluctuations at critical point 1=18671
dimethyl oxalate, semiempirical calc. 3=306
ethyl ether 1=13020
hydrocarbons, sat., rel. to chain length 2=6233
isotherm near critical point 1=18672
isotherm near critical point 3=3924
liquids, with molecular interaction 3=21314
liquids, and zero-point volumes 4=27377
mixtures, Benedict, Webb, and Rubin equation 3=16844
monatomic elements, critical press. determ., theory 4=18501
partition function correction 4=5479

Critical constants, thermal—contd
polystyrene in cyclohexane, critical opalescence 2=5016
simple fluids, critical region rel. to correl. functions 4=24441
solution films 1=16179
temperature, rel. to sound velocity and corresp. states law 2=5070
theory, gases, progressive condensation 4=14460
three-component solns., diffusion 4=29618
two-component liquid systems 1=2754
ultrasonic attenuation in critical region 0=19135
vapour—liq. equil., van der Waals theory, crit. region 4=8506
water, heavy and ordinary, determ. from exper. data 4=29813
Ar, cellular method calc. 3=21292
Ar, critical opalescence, X-ray meas. 4=2890
Ar, critical press. determ., theory 4=18501
Ar, triple pt. 2=5220, 6269
$BiCl_3$, critical temp. 4=29812
CF_4, triple point temperature 3=132
CO_2, isotherm calc., opalescence 4=8527
CO_2—H_2O, curve, up to 3500 bar 4=8508
Cu, eqn. of state near crit. point 4=25849
Cu, liquid 2=19544
F_2, liq., calc. using significant structure theory 4=8166
H_2, HD, D_2, on cell model, Lennard-Jones—Devonshire 3=21318
H_2, triple pt. 4=5478
He^4, solid, triple-point temps. 4=21386
Kr 2=6270
Kr, triple pt. 2=5220
Mg 2=15572
Ne—nD_2 liquid mixtures, excess free energy at triple point 4=2668
O_2, C_v near critical point 4=5480
SiF_4 3=21636
Xe, critical press. determ., theory 4=18501
Xe, triple pt. 2=5220

Cryoscopy
See Freezing; Low temperature production; Low temperature technique.

Cryostats
(Heading introduced in 1962).
adjustable temp., for thermoluminescence research 3=9650
for adsorption measurements 4=11399
for absorption spectrophotometry, −194° to −40°C 3=9651
conductor, elec., optimum conditions, general heat exchange 4=16309
for e.s.r., n.m.r., He^3 4=24860
electrical conductors, optimum design for perfect thermal exchange 4=11439
for electron beam studies, 6°-77°K 4=27400
for electron irrad. of metals and semiconductors, 4.2°K 4=11440
gas-flow, for spin-echo n.m.r. spectrometer 3=14793
for heat conduction meas. under mechanical loads 4=8487
He-bath, vapour pressure stabilization device 4=8541
helium and hydrogen, without liquid nitrogen cooling 2=19792
He^3, for $\leq$ 0.34°K temps. 3=3936
He-3, for radioactive Np and Pu 4=21421
He, stub-tuner impedance matching 3=12015
for high-pressure studies, liquid—He temp. 3=19081
intermediate temps. (4.2 - 50°K) 3=12014
laboratory instrument, for −30°C 2=5209
liq. gases, automatic refilling device 4=375
liquid He, for refractive index meas. 3=3874
liquid level detector 4=376
liquid—level indicating apparatus 2=11226
liquid-level indicator for opaque cryostats 3=24127
liquid-nitrogen (-130 to -190°C) for neutron scattering 3=7380
liquid nitrogen temp, for isothermal annealing of metals after heavy-particle bombard. 4=8488
for magnetoelectric anisotropy study, Bi_2Te_3 4=16310
matrix-isolation spectroscopy, miniature cryostat 4=5490
metal, for mag. susceptibility meas., 4.3° to 300°K 3=2078
for metals, low-temp. tensile deform., thermal props. 3=9667
for metals thermal expansion method 2=7439
for nuclear orientation expts., He^3 4=11442
for n.q.r. meas. 3=24503
for nuclear quadrupole reson. meas. 4=14919

Cryostats—contd
optical measuring device, 4.2°-300°K 2=2921
photomultiplier-cooling device, to −196°C 3=19316
review, below 1°K 4=11429
for susceptibility meas. of paramag. salts 4=10249
for X-ray examination of materials 4=15780
for X-ray investigations, liq. N_2 to room temp. 4=353
−20° to −140°C, for lab. use 3=19080
−60° to 20°C, for small samples 4=24466
−196° to −100°C semi-automatic 4=27398
for 42°-50°K 2=22107
20°-870°K, for localized ht. control 4=24419
15°K to room temp., simple 4=18504
14°-300°K, adaptable for high pressure expts. 4=11397
for 10°-320°K, to be reached in 4 min 2=23242
0.02°K and below 4=8534

Crystal chemistry
ABO_3-type (A = Ca, Sr, Bi; B = Sn, Zr, Al, Cr) 1=15018
adsorption, chemical, localized-states theory 0=10367
amphiboles 0=8147
chemical binding in the DO_3 structure 1=1387
conference, Cambridge (1960) 1=6488
geometrical bases 4=7524
germanates and silicates, relationships 4=4509
Gp. VIII metal cpds. 1=15017
graphite, dimensional changes, rel. to Br absorption 4=30808
isomorphism, theory 2=2370
magnetic props., indirect interactions, model 3=3079
magnetic props. of transition ions in asymmetric ligand fields 1=20038
minerals, distorted co-ordination polyhedra, structures rel. to Pauling's rule 2=12919
normal valence cpds., new classification 0=3219
I-V compounds, covalent bonding 2=6247
organic, free radicals, irrad. production 2=12485
oxygen—vanadium bronzes of group I elements 0=14029
perovskites, cubic, ABX_3, Madelung consts. 0=13474
phosphor systems, classification 2=16845
piezoelectrics, 18 substance groups 1=4031
rare-earth iron garnets 3=3282
semiconducting compounds, general valence rule 4=7601
semiconducting compounds, inorganic, ionicities 2=6437
semiconductors, binary, composition stability limits 1=19844
semiconductors, chemical bonding, review 1=6139
semiconductors, cpd. inorganic, atomic radii, electronegativities and activation energies 1=17675
semiconductors, departures from ideal chem. structure, rel. to chem. reactivity 1=3736
silica and silicates, etching by HF 0=16376
silicates, layered, reported departure from ideal structures, criticism 0=6362
silicates, nature of Si—O bond 1=20565
spinel, cation distrib., rel. to oxygen pressure 1=20450
spinels containing Mn^{3+}, cation valencies and distrib. 2=6792
spinels containing Mn and Fe, valence assignment 0=3240
transition element compounds, semicond. prediction 2=6447
transition-metal hydrides 0=18289
transition-metal oxides 0=20954
transition-metal semiconducting cpds. 0=13932
II-VI compounds, crystallographic polarity 2=6791
Ag_2S, relation to electronic props. 0=7946
Ag_2Se, relation to electronic props. 0=7946
$(Ba,Pb)TiO_3$ 1=15018
$BaTiO_3$ with Co added 4=30807
CdS, defect chemistry 1=20014
CdS, photolysis, Cd particles growth 2=4553
CdS, precipitation of various structures from solns. 0=8207
Cl salts, positron annihilation in, similarity of Cl^- and S^{2-} ions 0=15336
Cr spinelides, transformation rel. to calcination 3=16081
Cu_2O, large single crystal preparation 1=15016
Cu_2Se relation to electronic props. 0=7946
DO_3 structure, chemical binding 1=1387
α-Fe single crystal growth by halogen reduction 1=15006
Fe oxides, Mössbauer study 2=6663
FeO, non-stoichiometry and Fe_3O_4 defects 2=16999
Ge, anisotropic soln., light figures study 3=13410
Ge garnets 2=2369
Hg(II) complexes 4=30861

Crystal chemistry—contd
K(Cr, Al) alums, properties due to different Al content 1=7710
$KTiNbO_5$ 4=23466
KTi_3NbO_9 4=23466
Mn rare earth cpds. cubic to hexagonal transition 1=20542
Mn^{3+} ionic cpds., symmetry rel. to mag. props. 1=14670
NaCl faces, reaction with H_2O, O_2 and N_2 2=4400
NaCl, selective etching 3=13408
$NaNbO_3$ 1=15018
NbC, lattice const. rel. to Nb/C ratio 1=6515
NiAs type cpds., bond characterization, from X-ray spectra 1=14617
Ni chromite 3=1011
$Ni_{1-x}Mn_{2+x}O_4$, rel. to composition 3=13078
Ni–Zn ferrites 0=16326
$PbNb_2O_2$-type cpds., ferroelectric props. 0=13652
Pt-metal compounds, rel. to superconductivity 3=24148
S and S cpds., positron annihilation in, similarity of S^{2-} and Cl^- ions 0=15336
Si, anisotropic soln., light figures study 3=13410
ZnS, defect chemistry 1=20014
ZnS, photolysis, Zn particles growth 2=4553
ZnSb, crystal growth, zone technique 1=14991

Crystal counters
See Counters, crystal.

Crystal imperfections
See also Colour centres.
A_6BO_8-type, electrostatic energy of ordering of vacancies 1=14252
additivity of imperfections as means for domain nucleation 1=6300
alkali halide activated crystals, luminescence 0=4433
alkali halides, aggregation of divalent cations 2=18577
alkali halides, Ag ion impurity, optical props. 3=10965
alkali halides and azides, crystallite growth on cleavage planes, rel. to irradiation 3=20254
alkali halides, β-irrad., interstitial defects, X-ray diffr. study 2=18572
alkali halides, charge of dislocations, meas. 3=22777
alkali halides, conference, U.S.S.R. (1959) 1=2360
alkali halides, contrib. to thermal expansion 1=14185
alkali halides, defect formation by X-ray irrad., Varley mechanism 0=9894
alkali halide, dislocation lines rel. to electron trapping 1=14271
alkali halides, dislocation pinning mechanism 2=6331
alkali halides, dislocations rel. to diffusion kinetics 2=6382
alkali halides, divalent imperfections, rel. to irradiation stability 4=6895
alkali halides, divalent impurity aggregation, rel. to cation vacancies 3=22760
alkali halides, doped, scattering centres 3=17779
alkali halides, F, Z centres, reactions with impurity ions 2=3959
alkali halides, formation of interstitials by ionizing radiation, theory 0=1593
alkali halides, formation mechanism by ionizing radiation 2=10373
alkali halides, formation mechanism by X-rays 2=12418
alkali halides, grain boundary energies 2=8804
alkali halide–hydride, mixed, anion vacancies 2=14433
alkali halides, impure, X-irradiation 2=3976
alkali halides, impurity content and substructure 2=3929
alkali halides, impurity effects on low-temp. anion diffusion 1=2391
alkali halides, impurity ions, lattice distortion theory 4=4040
alkali halides, interstitial neutral defects, relaxation and activation energies 1=17503
alkali halides, ionic, colour centres by irrad., props. 4=28496
alkali halides, lattice defect detection by electrolytic colouring 2=20994
alkali halide crystals, lattice distortion around impurity ions 3=22756
alkali halides, neutron irrad., n.m.r. study 0=3137
alkali halides, O_2^- impurities, mech. alignment 2=14362
alkali halide phosphors, dislocations, impurities 3=947
alkali halides, plastic anisotropy 0=18257
alkali halides, point defect formation rel. to irrad. 3=22730

Crystal imperfections—contd
alkali halides, point defect interaction, rel. to dielec. props. at high freq. and temp. 3=22974
alkali halides, point defects, rel. to Born repulsive potential 3=22625
alkali halides, point defects, rel. to hardening 20.5°-300° K 3=23364
alkali halides, due to precipitation reactions 1=2556
alkali halide solid solutions, effect on F-band half-width 1=14331-2
alkali halide solid solns., lattice deformations, calc. 2=19024
alkali halides, spectra, small-radii impurities, calc. 2=608
alkali halides, substituted radicals, paraelasticity 1=20315
alkali halides substructure study by ultramicroscope and e.s.r. 2=10399
alkali halides, trapped-hole centres, electronic states 2=3874
alkali halides, trapped holes, review 2=23103
alkali halides, vacancy—dislocation equilibrium 3=22749
alkali halides, vacancy pairs, dislocations 2=3897
alkali nitrates, thermal spikes due to α-rays 2=12425
alkaline earth orthophosphates, Sn activ. of lumin. 2=12615
alloy, charge polarization near impurity 3=8380
alloy, distrib. after zone-levelling passes 2=8212, 10383
alloys, binary and ternary, neutron scatt. probability for conc. heterogeneities 1=12635
alloys, dislocation movement in fatigue hardening 3=20736
alloys, dislocations, effect on solute diffusion 1=981
alloys, effect of dislocation on precipitation 2=830
alloys, in electrolysis theory 2=12970
alloys, f.c.c., faulting, effects of thermal-mechanical treatments 2=8232
alloys, f.c.c., stacking faults, electron microscope determ. 3=12993
alloys, f. c. c., stacking, in-and extrinsic distinction by electron microscope 4=6861
alloys, impurity electronic structure 3=22757
alloys, intergranular segregation 4=4636
alloys, lattice distortions, X-ray and neutron scatt. 1=15060
alloys, multicomponent, ordered, residual resistance, theory 2=6406
alloys, polycrystalline, dislocation motion and grain boundaries 0=15849
alloys, precipitating, vacancies, rel. to heavy-ion bombardment 2=21547
alloys, stacking fault energy, depend. of rolling texture 4=10565
alloys, stacking faults rel. to matrix in equilibrium 2=21048
alloys, vacancies, point defects, atomic displacement, rel. to neutron irrad. 3=10702
alloys, vacancy mechanism for diffusion 2=3933
alloys, X-ray absorption edge deformation, vacancy mechanism 1=3848
angular dislocations 0=14845
anisotropic crystal, extended dislocations in symmetry directions, theory 2=6327
anisotropic defects, response to stress 3=22695
anisotropic defects, stress-induced alignment 2=3914
anthracene containing anthraquinone, anthrone or naphthacene impurities, photocarrier trapping 4=15448
anthracene impurities in 9, 10-dihydroanthracene, luminescence at 20°K 1=20020
anthracene in polyphenyls, absorption spectra and luminescence 2=6567
anthracene, positron annihilation in, disorder effects 1=17524
anthracene, surface damage, absorption spectra at 20. 4°K 0=10057
antiferromagnetics, effect on susceptibilities 3=15904
antiferromagnets and ferromagnets, Dzialoshinski–Moriya interactions 3=15729
antiferromagnets, vacancies and interstitials 3=15483
apatite crystals, rel. to Mn^{2+} e. s. r. extra lines 4=10326
Armco-iron, dislocation movement rel. to yield-point 1=20351
aromatic hydrocarbons, polycyclic, elec. cond., impurity effect 4=26064
atom displacement by electrons, threshold energy 3=10700

Crystal imperfections—contd

- atom displacements, by radiations, electronic mechanism 2=12480
- atomic recoil mechanism from γ-emission 2=21007, 23166
- azide ion in alkali halides, interaction model 2=21250
- beryllium oxide, porosity, carbon precipitates 2=4517
- bicrystal, tilt wall formation, simple model 4=4526
- binary alloy, stacking faults, thermodynamics 3=12989
- binary alloys, thermal vacancies, formation energy 1=11191
- binary compounds, knock-on cascades and point defects, rel to irradiation 3=8419
- b.c.c. crystals, dislocation contrib. to elastic consts. 2=16943
- body centred cubic elements, edge dislocation anisotropy 3=10655
- b.c.c. lattice, $\frac{1}{2}\langle 111\rangle$ screw dislocations 3=25279
- body centred cubic, moving edge dislocations 3=10654
- b.c.c.$\{110\}$ planes, partial dislocations 2=21023
- b.c.c. stainless steel, dislocation interactions 1=7584
- boundaries of crystals, simulating structure 3=3283
- α-brass, boundary and stacking-fault fringes, anomalies 3=2812
- α-brass, dislocation arrangements obs. 3=17738
- brass, dislocation pinning rel. to mech. props 2=18978
- α-brass, dislocations, pile-up and locking 1=11200
- α-brass, dislocations, pile-up and locking 1=12381
- α-brass, rel. to order—disorder phenomena 1=1418-20
- α-brass, polygonization 0=17950
- α-brass, slip plane dislocation energy rel. to orientation 3=3257
- α-brass, stacking faults 1=12395
- brass (30-35% Zn), stacking faults 2=10902
- α-brass, stacking faults 2=19405
- β-brass, stacking faults, effect on Debye line intensity 1=15059
- brass, vacancies and Kirkendall effect 1=14250
- α-brass, vacancy aggregation at grain boundaries 2=8234
- Burgers vector for c.b.c. crystals, exptl. determ. 0=2816
- calcite, defect formation due to twinning 3=22696
- calcite, dislocation etch pits 0=16283
- calcite, dislocations, selective etching 1=3668
- calcite, dislocations, in twinning 1=14285
- calcite, mechanically twinned, lattice distortion on grain boundary 0=11999
- calcite, phosphorescent, influence of defect sites on chemical structure 1=1363
- calcite, at twin boundaries 1=14264
- cementite, of hardened cast iron, dislocation density 2=10385
- ceramics, defect healing under pressure 1=17548
- ceramics, neutron irrad., defect loops 4=22640
- charge recomb. and capture 3=20125
- charge recomb. and capture, little electric field effect 3=20126
- chromium luminors, deformations rel. to luminescence 3=20512
- circular edge dislocation loop 1=7580
- cleavage, micro, graphite, effect on thermal expansion, accommodation 3=8371
- cleavages, in topaz, etching 4=23315
- cluster growth rate, rel. to elastic interaction 3=22697
- clustered vacancy defects in f.c.c. metals and alloys 0=20791
- concentration increase during plastic deform. 3=11154
- conductivity elec., due to free electron scatt. 4=25988
- conductivity, thermal, meas. 4=1450
- conference, Japan (1962) 3=20156
- conference at Kingston, Ontario (Sept. 1959) 1=2386
- conference, London (November 1961) 2=14425
- corundum, quadrupole interactions of V and Mu 4=3959
- Cottrell atmospheres in dilute solid solns., theory 1=15155-6
- Cottrell atmospheres, theory 2=12427, 14435
- covalent crystals, impurity centres, ionization energy, temp. depend. 0=15864
- covalent, radiation effects, and paramag. res. 4=28507
- crack formation, during plastic deformation 0=688
- crack growth, under tensile load, "longevity" eqn. 0=3155
- cracks, shape in crystal microscopic model 0=18280
- and creep, activation energy 3=8769
- crostedtite, stacking, and X-ray diffr. streaking 4=20289
- crystal substrates, effect on ice nucleation and growth 1=1369

Crystal imperfections—contd

- crystallite dias., ferrites, var. due to locking of boundaries by pores 3=11242
- crystallization from melt, reduction 3=20790
- cube dislocations in mechanical twins 2=2080
- defect chemical reactions, statistical formulation 0=9892
- defect config., spatial distrib., rel. to irradiation 3=17800
- defect crystals, electron-energy band structure 2=10347
- defect formation, electron energy change, non-interacting system 1=14206
- defect interactions, internal friction study, review 2=21012
- defect particles, chem. reactions in cubic lattices 0=9892
- defect properties in distorted ionic crystals 0=6015
- defect recombination processes, diffusion theory 2=2655
- defect structure rel. to photoconductivity 2=23443
- defect term spectroscopy using elec. cond. 2=6311
- defects caused by irradiation, with approx. to rigid spheres 3=8417
- defects from coalescence of twin layers in polysynthetic twin 4=25930
- defects and dislocations by X-ray diffraction micrographs 2=14983
- defects, effect on lattice vibrations, appl. to linear chain 0=11569-70
- defects, electron microscope study, review 2=23193
- defects, electron microscope technique and application 4=29157
- defects by fast electron-irrad., rel. to Li doping 3=22704
- defects and motion for diffusion, elec. cond. meas. 2=3931
- deformability of neighbouring ions 0=7880
- deformation faults, density, α-brass, under tensile stress 3=6524
- deformation mechanism, tilting stretching stage for electron microscope 2=19129
- deformation problems, application of the discrete Fourier transform 1=17500-1
- deformation twinning, crystallography of 0=8155
- deformation twinning in F.C.C. metals 1=7839
- deformations $< \sim 0.1''$ arc, obs. by double spectrometer device 4=22572
- deformed crystals, cracks, origin and development 1=6478
- deformed crystals, cyclotron and paramagnetic resonance 1=10178
- deformed crystals, cyclotron and paramagnetic resonance 1=11472
- deformed—undeformed metal thermocouple, e.m.f. origin
- detection using thermal cond. of supercond. state 2=7515
- diamond, dislocations, study by X-ray projection topography 0=17929
- diamond, due to electron beams, optical and elec. data 2=12477
- diamond, grain boundaries 1=6109
- diamond, imperfection photoconductivity 3=2975
- diamond, impurities and X-ray diffr. spikes, topography 4=4646
- diamond, inclusions, X-ray study 0=14000

Cu–Si–Mn alloys, deformed, atomic rearrangements 3=22701
Cu–Si–(Mn) alloys, stacking fault probability rel. to deformation and annealing 3=22701
Cu–Si–Mn, stacking faults, formation under tensile deformation 4=12774
Cu–Zn alloys, dislocation density, from thermal cond. data 0=1579
Cu–Zn alloys, identification by conductivity meas. 0=9900
Cu–Zn alloys, stacking faults 1=19797
Cu–Zn alloys, stacking faults, rel. to slip 3=1230
Cu–Zn, detection of dislocations 0=20801
Cu–Zn, polygonization, under deformation 1=12377
Cu–Zn solid soln. stacking faults, solute atoms effect 2=600
CuZn alloy, Ne$^+$ ion irradiation effect 1=14322
Cu–(Zn, Cd) alloys, stacking-fault probabilities 4=4063
Fe, ageing, ionic bombardment examination 0=7902
Fe, annealed, dislocation networks 3=20200
Fe, arrangement of dislocations 1=14272
Fe, atomic displacements near threshold 2=23168-9
Fe, b.c.c., clustering of N impurities 3=20166
Fe, C and N impurity atoms, mag. effects 2=42222
Fe, cast, steel, lattice distortions, effect of cold pressing, by X-ray reflection 3=18401
Fe, climbing dislocations, in recrystallization 2=23888
Fe, due to cold working or neutron irrad. 4=6900

Crystal imperfections—contd
Fe, defect reorientation rel. to magnetization by neutron irrad. 3=8469
α-Fe, deform. twins, indented surface markings 3=13403
Fe dislocation arrays, electron microscope replica technique 3=17739
Fe, dislocation damping, rel. to internal friction 2=21405
Fe, dislocation distribution by etch method 3=15498
Fe, dislocation images by transmission electron microscopy 3=801
Fe, dislocation—intrusion atom interaction rel. to yield point 3=5065
α-Fe, dislocation locking by C, N, B 0=20811
Fe, dislocation locking and yielding model 2=16952
Fe, dislocation motion, mag. after-effects 0=13820
Fe, dislocation movements in creep 3=23335
Fe, dislocation pinning and thermal activation of yielding 2=10743
Fe, α-phase, dislocation structure, by electron micr. 3=4875
Fe, dislocations rel. to allotropic transform. 2=10398
Fe, dislocations under creep, rel. to precipitates 3=18189
Fe, dislocations, Peierls—Nabarro force 1=1515-16
α-Fe, dislocations, pile-up 1=4984
α-Fe, dislocations, rendering visible, by anodic dissolving 0=2818
α-Fe, dislocations, shock wave induced 3=4872
Fe, dislocations when in tension 3=20198
Fe, dislocations, with trapped C, mag. viscosity 0=1803
α-Fe, double pile-up, interactions between glide dislocations 1=2510
Fe, effect of annealing on dislocations 1=14273
Fe, effect of strong shock waves 2=23846
Fe, effect on surface oxidation 1=4077
α-Fe, emissary dislocations and deformation twins 2=16654
Fe foils, dislocations due to bending 1=8909
Fe, γ-irrad., mag. props. 2=8628
Fe, grain boundaries 2=8233
Fe, grain boundaries, C diffusion 1=3683
Fe, grain boundaries, self-diffusion and precipitation, impurity separation 0=17970
Fe, impurity content at oxygen interface, direct obs. 2=23162
Fe, irradiated, study by mag. after-effects meas. 2=12475
Fe, mosaic structure, after recovery and recrystallization 2=21049
Fe, N and C clustering 3=22759
Fe, neutron irradiated 1=1227
Fe, neutron-irrad. induced, mag. props. 0=18189
Fe, neutron irrad. of pure and doped samples 4=1832
Fe oxidation, defects at interface 2=12440
Fe oxide films on Fe single crystals, stacking faults 4=26711
γ-Fe, plastic deformation, dislocations, irregular sub-boundary networks 0=17943
α-Fe, point defect and dislocation interactions, due to neutron irradiation 3=8477
Fe, point defects, rel. to n-irrad. 3=17702
α-Fe, radiation damage, dynamics analysis 4=6890
Fe (silicon-iron), dislocations by etching 2=12444
Fe single crystal plates, mosaic structure in early stages of tensile deformation 4=7432
Fe, α-phase, slip bands after neutron irrad. 3=809
Fe, α-phase, slip dislocation, origin 2=8214
Fe, stacking faults, rel. to internal friction 2=23198
α-Fe, stress field of dislocation 0=15848
Fe thin films, anisotropy rel. to residual gas press. 2=4228
γ-Fe, vacancy density 1=4982
Fe whiskers, obs. of paired screw dislocations 0=3182
Fe wires, dislocation atmospheres, density 3=13333
Fe wires, dislocations, rel. to internal friction 1=14854
Fe, zone-melted, stacking faults in thin foils 4=9974
Fe—Al, rel. to creep 2=4333
Fe—Al alloy, dislocation structure, coercive force variation 1=11429
Fe—Al alloys, elastic and plastic props. rel. to quenching 2=6715
Fe—Al, iron-rich, dip system 4=6854
Fe—Al alloys, lattice, temp., composition var. 4=23529
Fe$_3$Al, superlattice dislocations 1=14280
Fe alloy wires, damping due to dislocations, effect of O and Si solute atoms 0=21101

Crystal imperfections—contd
Fe—C austenite content determ. by mag. precision meas. 2=16649
Fe—C grain boundaries 2=8233
Fe—C, precipitation of C, rel. to radiation-produced defects 3=22866
Fe$_3$C in steel, increase on deformation 4=4057
Fe—C—N, segregation at grain boundaries and dislocations 4=1503
Fe—Cr, γ-irrad., mag. props. 2=8628
Fe—Cr, grain boundaries 2=8233
Fe—Cr, σ-phase, defect substructures 2=23200
Fe—Cr, σ-phase, fault and dislocation direct obs. 2=10390
Fe—Cr alloys, vacancy density, Cr conc. depend. 1=4982
Fe—Cr—Ni, alloys, stacking faults 3=12987
Fe—Mn alloys, stacking faults 1=17545
α-Fe—Mo alloys, dislocation rings, clustering 1=4070
Fe—N, cold-worked, interstitial—dislocation interaction 3=23293
Fe—N alloys, internal friction due to dislocations 0=16209
Fe—Ni alloys, dislocation, chemical etching 1=2521
Fe—Ni alloys, dislocation etch pits, electrolytic etching 0=16282
Fe—Ni alloy, dissociated dislocations, obs. 3=17767
Fe—Ni, γ-irrad., mag. props. 2=8628
Fe—Ni alloys, irrad.-induced defects, rel. to magnetic structure 3=22729
Fe—Ni, irradiated, study by mag. methods 2=12475
Fe—Ni, neutron irrad., annealing of defects 4=1457
Fe—Ni, plastically deformed, dislocations, mag. coercivity 1=2474
Fe—Ni, alloy, stacking faults 3=12987
Fe(50%)—Ni(50%), vacancies, rel. to neutron irrad. 3=11056
FeO, defects in crystal and mag. structure, neutron diffr. study 0=20790
FeO, Fe$_3$O$_4$ defects rel. to non-stoichiom. 2=16999
FeO, impurities, effect on mag. transition point 2=2267
Fe$_2$O$_3$, dislocations, visualization by etching 2=18587, 23176
γ-Fe$_2$O$_3$, vacancy distrib. 3=787
Fe$_3$O$_4$, effect on thermal conductivity 2=10342
Fe$_{0.996}$S, lattice distortions, by neutron diffraction 3=1023
Fe—Si alloys, ball-indented, slip bands 1=20363
Fe (2.9% Si) cleavage fracture 1=14916
Fe—(3.1-3.6%)Si, deformation twins 3=17778
Fe—Si alloy, dislocation formation by spark discharge 1=17529
Fe—3%Si, dislocations 2=10386
Fe—Si, dislocations due to bending 2=21041
Fe—3%Si, dislocations distrib. in slip bands 2=14436
Fe—3%Si, dislocations after plastic deform. 3=20176
Fe—4%Si, dislocations, revealed by etching 2=14933
Fe—Si, grain boundaries, effect on Block wall movement 0=18192
Fe—Si, impurity atoms, mag. effects 2=4222
Fe—Si, melt grown, dislocation density 0=13539
Fe—3.2%Si, $\{112\}$ as active slip planes 2=18581
Fe—Si, precipitates and slip bands due to deformation 1=3984
Fe—Si single crystal, mosaic block misorientation 2=6357
Ga, impurity contrib. to residual resistivity at 4.2°K 1=14359
GaAs, defects introduction and removal, by thermal treatment, effect of Cu 4=15467
GaAs, defects prod. by Li 3=8423
GaAs, dislocation detect. by etching 2=18588, 23196
GaAs, dislocations, rel. to Cd diffusion 4=9986
GaAs, edge dislocation study by etching 0=11623
GaAs, effect of As pressure on Ge doping 0=20915
GaAs, energy of formation, by electron irrad. 0=4290
GaAs, α-Ga$_2$O$_3$ crystallite impurities 2=12428
GaAs on Ge substrates, stacking faults, grains and twin planes rel. to Ge surface 4=29066
GaAs, high defect concn. 3=791
GaAs; impurity Li, properties rel to Zn and Te doping 3=10818
GaAs, isolated defects rel. to length changes 3=22861
GaAs, n-type, defects after annealing, decay 2=21005
GaAs, n-type, effect of radiant energy 2=8361
GaAs, neutron irrad., magnetoresistance 0=6121
GaAs, Te-doped facet formation rel. to supercooling 3=12980
GaAs vapour-deposited films, stacking faults 4=13681

Crystal imperfections—contd

Pb, fast moving edge dislocations 2=12433
Pb and Pb alloys, lattice vacancy equilib. concentration 3=22739
Pb-stack-fault energies 2=8718
Pb, stacking fault energy, cross-slip and subgrain obs. 4=9975
Pb, stacking faults 1=12395
Pb, stacking faults, bulk specimens, measurement probabilities 3=12992
Pb, striations 0=13545
Pb, and superconducting, critical current/mag. field 3=19112
Pb, thermal vacancies, formation energy 1=11192
Pb, vacancies, formation energy and conc. 1=7575
Pb—Ag alloy, stacking faults 1=12395
$PbCl_2$, pure solid, vacancies nature 3=10645
$PbFe_{12}O_{19}$ (magnetoplumbite), dislocations, vis. by etching 2=18587, 23176
PbI_2, dislocation, loops due to fission fragments 2=23185
PbI_2, dislocations and vacancies, formation during decomposition 0=21175
PbI_2, helical dislocations 1=11203
Pb—In alloy, stacking faults 1=12395
Pb metaniobate, elec. cond., effect of doping 2=16685
$Pb(NO_3)_2$, effect on chemical γ damage annealing 4=4714
PbO, cation impurities, rel. to conductivity, disorder phenomena and colour 3=13075-6
PbS, dislocations rel. to nonstoichiometry 3=25266
PbS, effect of doping on self-diffusion 3=10688
PbS films, evap., dislocation types 3=17754
PbS—PbSe layer 1=19789
PbSe, anion vacancies, rel. to stoichiometry 3=22736
PbSe, rel. to self-diffusion of Pb 2=2099
PbTe, defect carrier contrib. to thermal energy gap 1=17750
PbTe, dislocation etch-pits, technique 1=19791
PbTe, impurity influence on thermal conductivity 1=19729
PbTe, impurity influence on thermal conductivity 2=3857
PbTe, n-type, dislocation etch pits 0=8171
PbTe, near-stoichiometric, vacancy behaviour 2=10491
PbTe, point defects 2=6468
Pd, dislocation relaxation 1=17533
Pt, dislocation relaxation 1=17533
Pd, Ni substitution, localized defect mode 2=12373
Pd, stacking-fault density meas. 4=9978
Pd, stacking-fault energy 4=12769
Pt, effect on thermoelec. power 4=20435
Pt films, effects of ion bombardment 2=18622
Pt, fission-fragment damage 2=612
Pt foils, annealed and irradiated 3=8437
Pt foils, dislocations, α-particle irrad. 2=16661
Pt foils, dislocations and fission damage 3=25275
Pt foils, loops and dots, rel. to irradiation 3=17701
Pt, ion bombarded, lattice defects 2=23170
Pt, neutron irrad., focusing collisions along twin boundaries 1=11246
Pt, point defects 0=20798
Pt, prismatic loops, rel. to radiations 3=22767
Pt, pure, effect on field emission 2=20015, 22246
Pt, stacking-fault density meas. 4=9978
Pt, stacking-fault energy 4=12769
Pt, vacancy quenching and movement, thermo-e.m.f. study 0=17955
Pt_3Fe, thermal spikes, size meas. 3=22853
Pt phthalocyanine, dislocation dipoles rel. to fission fragments 3=20253
Pt phthalocyanine, molec. disarray caused by fission fragment 1=19817
Pu, Pu—Al, lattice defects from self-irrad. 4=1537
Pu, self-damage accumulation 3=22856
Pu, due to self irradiation, saturation 4=12834
Re, formation under neutron irrad., supercond. 0=3706
Rh, deformed, fine structure 2=15109, 16664
Rh, stacking-fault density meas. 4=9978
Rh, stacking-fault energy 4=12769
S, spiral formation on screw dislocations in natural crystals 1=9112
Sb, dislocation mobility change, rel. to i.r. irrad. 3=18218
Sb dislocation movement by etch-pit method 1=17540
Sb, dislocations, due to deformation 1=972

Crystal imperfections—contd
Sb, dislocations, revealed by etching 1=14283
Sb, low-angle boundary displacement in annealing 4=15481
Sb_2Te_3, dislocation nets 0=20815
Sb_2Te_3, large dislocation loops 1=12385
Se, doped with Br and Tl, elec. props. 3=17892
Se, impurity Tl rel. to elec. cond. 2=16731
Se, trapping centres 3=873
Si abraded surfaces, electron microscope study 3=3353
Si, anti-Schottky defects 3=12963
Si, climb of edge dislocations, Au-induced 3=17715
Si, Cu atmospheres at dislocations 2=18686
Si, Cu decoration, precipitation behaviour 1=4987
Si, defect electrons, mag. susceptibility 0=2979
Si, defect i.r. absorption spectrum 3=23076
Si, defect vibrations, optical absorpt. 3=10581
Si, defects, additional levels, rel. to photoconductivity meas. 4=1687
Si, defects, rel. to fast electron and neutron irrad. 3=22725
Si, defects induced by thermal neutrons 1=14347
Si, defects induced by thermal neutrons 1=17593
Si, defects produced by neutron irrad., size of damaged regions 0=2835
Si, dislocation density 1=4028
Si, dislocation density, and microhardness 2=21028
Si, dislocation density, rel. to zone growing 2=23368
Si, dislocation-free growth from imperfect seeds 1=9115
Si, dislocation-free, microstrains at B impurities 3=15486
Si, dislocation kink motion 3=10663
Si, dislocation obs. by heat treatment in different vapours 3=20180
Si, dislocation velocity and density 2=21033
Si, dislocations 0=21183
Si, dislocations 2=12431, 14441
Si, dislocations, due to B doping 2=18583
Si, dislocations, curved and destoon formation 0=13537
Si, dislocations, diffusion-induced 2=10397
Si, dislocations, discrete stress field 2=23177
Si, dislocations, discrete stress field 3=6518
Si, dislocations, effect on plastic deformation 2=16956
Si, dislocations, etching 0=1580
Si, dislocations, formation at cracks 3=5064
Si, dislocations formed by vacancy disk collapse 0=20814
Si, dislocations, interaction with vacancies 2=21032
Si, dislocations, interaction with vacancies 3=6517
Si, dislocations, rel. to internal friction 1=1303-4
Si, dislocations, loop, electron microscope obs. 2=21043
Si, dislocations, obs. of internal stresses 2=6725
Si, dislocations in single crystals 3=797
Si, dislocations due to solute diffusion 1=14270
Si, dislocations and twinning 1=7837
Si, dislocations, X-ray invest. 2=21574
Si, dislocations, X-ray study 1=14278
Si, divacancy, and direct electron-beam prod. 2=83905
Si, dopants, rel. to u.v. reflection spectra 3=18007
Si, doped, distrib. coeff. in crystal growth 2=10382
Si, doped with Sb and P, stacking faults 4=28574
Si, doping and radiation damage centres, by ion bombard. 4=28558
Si, E-centre, e.p.r. and ENDOR meas. 4=20309
Si, effect of interstitial Li on density 1=19767
Si, electron bombard. defects 2=18688, 23362
Si, electron-bombard. defects, depth distrib. 3=22858
Si, electron bombard. defects, energy levels 2=23365
Si, electron-bomb. defects, energy levels 3=6590
Si, rel. to electron-irrad. 3=22859
Si, electron irrad. damage, directional distrib. 0=1608
Si, after electron irrad., photocond. study 3=22764
Si, energy levels after proton irrad. 4=15458
Si, epitaxial films, defect structure 3=5091
Si, epitaxial films, doping profiles meas. 3=10650
Si epitaxial layers, stacking-fault density, effect of growth rate 4=12771
Si, epitaxial, stacking faults 2=10404
Si, epitaxial, stacking faults structure, origin 3=10680
Si, epitaxial, stacking, obs. by interference contrast microscopy 4=20287
Si, epitaxially grown, X-ray analysis of stacking fault structures 3=25286
Si faults rel. to 750 keV proton exposure at 850°-900°C 2=23147
Si faults, by X-ray method, diagram evaluation 2=14426

Crystal imperfections—contd
- Si films, epitaxial, partial dislocations 2=10396
- Si films, in growth, etching is not necessary for low values 4=17844
- Si films, stacking fault nucleation 4=20288

surface, rel. to adsorption thermodynamics 4=7719
surface decoration, secondary, mechanism 4=30824
surface states, theory 2=3870
symmetry effect on physical properties, group theory application 4=30601
Thomson cubes and bipyramidal networks 3=20774
transition-ion complexes, ligand theory 1=14152
tricosanol, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
Vicalloy, precipitation-hardened, microstructure 3=20895
vinyl stearate, transitions 0=6299
Ag, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
Ag, films, rel. to electron density 2=6423
AgBr microcrystals, surface struct. 4=23313
AgBr, texture after plastic deformation 2=14927
AgCl, texture after plastic deformation 2=14927
AgNO$_3$, -30° to 171°C 3=13401
Al, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
Al, bending stresses at grain boundaries 3=18177
Al bicrystals, misorientation rel. to growth rate 3=11223
Al, block misorientation, effect on strength 3=11193
Al, constant-strain fatigue, substructure 3=11328
Al, cyclic, under large strain ranges 3=20740
Al grain boundaries, from bicrystal creep shear 4=20641
Al, grain size, rel. to stress/strain discontinuities 4=23118
Al, melt-grown, substructure 3=23350
Al, mosaic block disorientation 3=10682
Al, mosaic structure, influence on creep 4=7405
Al, polygonization, annealing of dendritic single crystals 3=3335
Al powder, ground, recryst., X-ray meas. 4=10575
Al single crystals, lineage struct. 4=23521
Al, single, lamellar ribbon impurity struct. 4=23309
Al, striation substructure 2=16982
Al, subgrain rotation during recryst. 2=23828
Al, sub-grain structure, effect of thermal cycling 1=9109
Al, substructure under constant cyclic strain 3=20742
Al, substructure produced by impact 4=1967
Al, substructure, single crystals obtained by deformation and annealing 4=26590
Al, substructure of spherical crystals 3=23463
Al, under work hardening and recovery 2=796
Al wires, recrystallization and polygonization, from tensile testing 4=1925
Al—Ag alloy, Guinier—Preston zones, metastable precipitates 4=26691
Al—Ag(8%) solid soln., disintegration under heat treatment, focussing obs. 4=7678
Al—Cu alloys, conc. microheterogeneity in grains, various cooling rates 4=26690
Al—Cu alloy, Guinier—Preston zones, metastable precipitates 4=26691
Al–Cu alloy, high-voltage electron microscope study 2=4434
Al—Cu alloy, rel. to strength 4=17721
Al–Cu eutectic, lamellar structure 0=12068
Al—Cu solid solutions, matrix block struct. changes 3=20906
Al garnets, lattice energy, calc. 4=3955

Crystal structure—contd
Al halides, molecular, electron diffraction study 0=14007
AlNiCo 500, AlNi, magnets constituents, by microsonde and microhardness 3=16090
Al_2O_3 films, formed on electropolishing 1=6491
Al—Si solid solutions, matrix block struct. changes 3=20906
Al—Zn alloy, Guinier—Preston zones 3=8881
Al—Zn alloys, ageing, GP zone effects 3=11295
Al—Zn eutectic alloy, interlamellar spacing meas. 4=4650
AsLi, covalent bonding 2=6247
As_2O_3, sp. ht. correl. 0=13490
Au films, order—disorder changes on neutron irrad. 2=8265
Au_3Cu, ordered structure 4=13485
Au—Sn alloys 1=1455
Au_3Zn [R], study by oscillation method 1=2542
Ba layers on W, electron diffraction exam. 1=20701
BaO layers on W, electron diffraction exam. 1=20701
$BaTiO_3$, compensation of ferric ions in lattice 3=11196
$BaTiO_3$, domain orientation, rel. to mechanical load 3=22995
$BaTiO_3$, domains 4=26694
$BaTiO_3$, films, single-crystal, domain structure 2=23938
$BaTiO_3$, grain structure of sintered material 2=14636
$BaTiO_3$–$BeHfO_3$, from ϵ/T meas. 2=4359
Be evaporated layers, crystallite size 4=10449
BeO, microstructure effects on irradiation behaviour 4=6896
BeO, sintered, electron micr. meas. 4=13643
RBe_{13}, (R = rare earth metal) 4=23421
Bi 4=12882
Bi and Bi—Sb alloys, grain size, effect on resist. elec. and Hall coeff. 3=20323
Bi–Pd system, γ-phase and low-temp. structure 0=16318
Bi—Pt alloys between PtBi and $PtBi_2$ 3=11280
Bi_2S_3, sp. ht. correl. 0=13490
Bi_2Te_3 4=13530
C films, graphitization, meas. 4=23263
$CaWO_4$, cellular structure, grown from melt 3=25665
$Ca_{0.16}Zr_{0.84}O_{1.84}$, isothermal grain growth 4=13644
CdS, breakdown field dependence 0=2355
CdS evap. films 4=20803
CdS, films 3=22941
CdS, hollow wurzite type, and growth 4=29047
Cd–Se, condensate, composition depend 4=23239
CdTe, bond nature 0=7833-4
CdTe films, rel. to deposition temp. 3=23508
CdTe, from transmission, light 4=1508
CdU_2O_4 (spinel) 1=4054
Co, α- and β-phases, interrelationship 3=1257
CoIII cyanides 0=4581
$CoCs_3Cl_5$, two phases at low temps., from Zeeman effect 4=15585
CoMn oxide spinels, tetragonal distortion 2=6760
Co—Ni–P alloys, fine-particle structure of electrodeposits rel. to heat treatment 3=16097
Co—P alloys, fine-particle structure of electrodeposits rel. to heat treatment 3=16097
Cr, magnetic structure 0=3041
Cr–Ni alloy, mosaic block size, during aging 2=8853
CsCl, allotropic transformation observation 0=3171
CsCl, texture after compression 2=14928
Cu, Al, Ni, changes during deformation at high temp. 2=2320
Cu bicrystals, grain boundary diffusion of Ag 3=6533
Cu electrodeposits, partial (110) pole figures rel. to thickness 4=7669
Cu and electrographite, changes during friction 3=6807
Cu, fibrous textures, elastic props. 4=17707
Cu, films, grain structure and distortions 3=2817
Cu, films, polygonal, formation, by electron microscopy 3=15494
Cu, grain boundary grooves 2=3928, 8234
Cu, grain size, block dims., microstresses, rel. to yield stress, hardness, plasticity 4=23138
Cu, grain and subgrain structure, effect of deformation and annealing 3=20945
Cu, large-angle grain boundaries due to deformation 4=10378
Cu, polycrystalline, subgrain formation on plastic deformation 4=30867
Cu powder, cold pressed, rel. to temp. 2=6785

Crystal structure—contd
Cu powder, ground, recryst., X-ray meas. 4=10575
Cu, reduced from scale, microstructure 4=23526
Cu strips, cold-rolled, recrystallization, effect of P 4=10576
Cu, surface structure after sliding of Cu stylus 4=15706
Cu texture transform., var. with rolling temp. 4=7481
Cu, thermally etched in vac., surface structure 4=17780
Cu, welded joint, microstructure 1=10359
Cu_2XY_3, (X = Ge or Sn; Y = S, Se or Te), superstructure and ordering 4=2066
Cu—Al martensites, mictostructure obs. 3=20869
Cu–Al solid solns., ordering kinetics, theory 4=7484
$CuAl_2$ = Al eutectic alloy, interlamellar spacing meas. 4=4650
$CuAl_2$—Al eutectic alloys, solidifcation 3=11283
CuAu II, superlattice, long-period 3=1358
$CuAu_3$, antiphase domains in superlattice 1=20594
Cu_3Au, antiphase boundaries 3=18334
Cu_3Au, local ordering at low temps. 4=26548
Cu_3Au II, domain size 3=13532
Cu_3Au, yield stress rel. to antiphase domain size 3=16001
Cu-base alloys, internally oxidized 4=7616
Cu–2% Be alloys, ageing, structural changes 4=7482
Cu—Bi alloys with oxide platelets 3=18221
Cu–Cr, sintered alloys 2=15052
Cu—Fe mixed whiskers 3=20796
Cu–Mn–In alloys, new phase 2=828
Cu—Ni—Al alloy, martensite transformation, parent and product structures 4=17755
CuO whiskers, growth on Cu 1=6502
Cu salicylate, modifications, mag. different 3=23374
Cu—Sb alloys, interfacial free energy 3=16096
Cu—Si alloys, with spherical oxide particles 3=18221
Cu–12 vol %SiO_2 alloy, particle coarsening 4=30868
Fe, $\alpha \rightleftharpoons \gamma$ interface 3=13494
Fe and alloys, grain boundaries effect on internal friction 2=4313
Fe, Ce distrib. on sub-boundary zones 3=20229
Fe, cold worked, cellular, by electron microscopy 3=13521
Fe, effect of ultrasonic heating to ~ 1000°C using internal friction 4=11398
Fe filaments, surfaces 4=10457
Fe films, on amorphous substrate, fibre orient 2=17067
Fe, films, columnar structure 4=26696
Fe films, rel. to optical constants 2=12577
Fe, grain size, rel. to stress/strain diagrams 4=20661
Fe, microstructural changes during torsion 3=6857
Fe, mosaic structure, effect of plastic deformation 0=16229
Fe single crystal plate, mosaic structure 4=26695
Fe, slip, intercryst., on weak plastic deform. and annealing 4=13432
Fe, subgrain changes during creep 1=14893
Fe, substructure network 4=2109
Fe whiskers, surface topography, effect of H_2-reduction and etching 1=4030
Fe, white layers 4=13653
Fe—Al alloys, "K-state" and order data 3=23467
Fe_3Al, antiphase boundaries in superlattice 2=6831
Fe_3Al, degree of order, rel. to Young's modulus 2=4308
Fe alloys, annealing effects 3=8903
Fe—Be alloys, ordering and segregation 4=4498
Fe—C—Mo alloy, precipitate, structure 4=17761
Fe—Cr—Ni—Si alloy, grain structure visualization 1=1422
$(Fe, Mn)_3C$, (cementite) 4=15734
Fe—N alloys, hexagonal, and effect of hybrid bonding orbitals 3=8884
Fe_4N 4=15734
Fe—Ni 50/50% alloy, cube texture, rel. to grain size and impurities 3=16112
Fe—Ni 50/50% alloys, rel. to mag. props. 1=6340
Fe—Ni alloy, effect of martensitic transform. 3=20866
Fe–(30.9%) Ni alloy, martensite structure 4=17830
Fe–Ni alloy, martensitic sub-structure 2=10904
Fe—Ni—Al, columnar, directional crystallization 4=23344
Fe–Ni–C, martensitic structure, morphology 2=4468
FeNi ferrite, rel. to mag. props. 2=749
FeO (wüstite), superstructure 4=2078
FeS growth spirals 4=26601
Fe—Si(3%), cold rolled, texture similarity to Fe 4=7673
Fe—Si(3%), (001)[100] primaries source 4=7672

Crystal structure—contd
  Fe—Si sheets, secondary grains, growth 3=16108
  Fe—Si(3.5%) slip, intercryst., on weak plastic deform. and annealing 4=13432
  GaAs, effective ionic charge 1=11331
  GaAs and GaP lamellae 4=26580
  GaAs oriented, vapour-deposited films 4=13681
  Ga—Sb—Te system 3=25732
  Ga_2Te_3 – $A^{III}B^{VI}$ tellurides 1=7878
  Ge, cleaved surfaces 3=23383
  Ge dendrite strips 3=18281
  Ge, domain formation, rel. to deformation and annealing 3=17772
  Ge, electron density distribution 1=5016
  Ge, epitaxial films, by electron transmission 4=4152
  Ge, grain boundaries, magnetoelec. props. 2=18677
  H, second-order transitions 3=6450
  HgTe, from transmission, light 4=1508
  Ho—Al compounds, $HoAl_3$, HoAl 4=23240
  InSb, dendrites, peculiar 4=2037
  InSb films, crystallite size 4=23581
  InSb, grain boundaries, effect on conduction 2=14453
  KCl, preferential orientation on prod. from K_2PtCl_6 and K_2PtCl_4 0=11992
  KCl:Tl—TlCl:K, mixed phosphors 2=6612
  $KMnF_3$, transition, 179.5°K and specific heat 3=8365
  KNO_3, above ferroelec. Curie point, disorder 2=17022
  $KOsO_3N$, Os charge and type of bond, by L_{III} absorption spectrum 2=14693
  LiAl, n.m.r. study 3=11122
  Li ferrite, neutron irrad., effect on structure 4=13242
  LiGa, n.m.r. study 3=11122
  LiIn, n.m.r. study 3=11122
  $LiMnO_2$ 0=13758
  MgO, grain boundaries, motion in bicrystals 2=14452
  MgO, neutron irrad., macroscopic growth 4=12833
  MgO, of various origins, X-ray and electron micr. study 4=10583
  MgO, X-ray line broadening evaluations 4=10584
  Mg—Zr alloy, grain growth rel. to creep strength 4=28965
  Mg-Zr homogenized alloy, Zr hydride formation 4=30872
  Mn ferrite, neutron irrad., effect on structure 4=13242
  Mn_5Ge_3, domain structure 3=23481
  $Mn(HCOO)_2\,2H_2O$, two types of site for Mn^{2+}, rel. to mag. props. 4=17671
  MnHg, distortion and magnetic transition, -75°C 3=6860
  Mn—Mg alloy, grain size, effect on tensile and compressive creep deformation 4=30781
  Mn—Mg ferrite, rectangular, grain size, rel. to switching 4=28843
  $MnZn_3$, distortion and magnetic transition, -125°C 3=6860
  Mo, cold rolling and recrystallization 4=2110
  Mo, deformation processes, onset of brittleness, 4.2-700°K 2=23755
  Mo, grain boundaries, rel. to irrad. hardening 3=4881
  Mo, subgrain boundaries 3=20212
  Mo-Permalloy ultra thin tape, cube texture 1=6527
  NH_4Cl, crystal habit change caused by $NiCl_2$ 4=29027
  NH_4Cl, texture after compression 2=14928
  NaCl, disloc. distrib. near subgrain bdy 4=17429
  NaCl films, rapidly condensed, orientation 3=8799
  NaCl, grain boundaries, motion in bicrystals 2=14452
  NaCl, natural and synthetic, microstructure 0=16366
  NaCl type lattice, Madelung constant 1=14146
  $NaNO_2$, microstructure in paraelec. phase 1=14953
  $NaNO_2$, order—disorder rel. to thermal cond. 2=3858
  NaTl, n.m.r. study 3=11122
  Nb, filed 4=23194
  Nb, polycrystalline, grain size 4=23192
  Nb oxides, from X-ray and electron diffr. 3=13458
  Nb—Sn supercond. wire, microstructure exam. 3=13586
  Ni, electrodeposited films 2=10939
  Ni electrodeposits, microstructure, effect of annealing 4=30870
  Ni, films, columnar structure 4=26696
  Ni, "ghost" grain boundaries, use as markers 4=7675
  Ni, grain, growth with boundaries saturated with Ni—S liquid 4=10564
  Ni, grain growth kinetics 3=20904
  Ni polycrystals, particle size from X-ray diffr. data 0=6354
  Ni powder, ground, recryst., X-ray meas. 4=10575

Crystal structure—contd
  Ni, polygonization, effect on creep, 550°, 700° and 900°C 3=20715
  Ni, single crystals, sub-structure 2=6859
  Ni, slip, intercryst., on weak plastic deform. and annealing 4=13432
  Ni, sub-microstructure, effect of plastic deformation 0=16253
  Ni, undercooled, crystallographic substructure 4=13652
  Ni—Ag alloy, undercooled, crystallographic substructure 4=13652
  Ni-base cast alloy, complex 3=11281
  Ni—Co alloys, rolling texture 2=15054
  Ni—Cr base alloy, heat treatment effect 3=18351
  Ni—Cr films, vacuum-deposited on glass, composition 4=20809
  Ni—Cr(13%) slip, intercryst., on weak plastic deform. and annealing 4=13432
  Ni—Fe (50/50), ordering, neutron effects 4=13207
  Ni—Fe tapes, transformation 0=3274
  Ni_3Mn, ordering rel. to magnetostriction 2=14792
  Ni—Mo alloy, grain growth kinetics 3=20904
  NiO, multiple twin domains and domain walls 3=1146
  NiO single crystals, twin walls meas. 4=20783
  NiO—Al_2O_3 system, from thermal expansion 4=23242
  NiO—α-Fe_2O_3 mixtures, spinel formation investig. by differential thermal analysis 4=1971
  Ni—Ta alloy, grain growth kinetics 3=20904
  [$Os(NH_3)_6Br_3$, Os charge and type of bond, by L_{III} absorption spectrum 2=14693
  Pb films, cryst. phase distrib. rel. to Hall constant 2=6470
  Pb films, 4°K, localized crystalline growth 4=4669
  Pb films, supercond., domains, opt. study 2=7512
  Pb, grain and twin boundary hardening, solute-induced 4=2014
  Pb—Cd eutectic alloy, interlamellar spacing meas. 4=4650
  PbSe films 4=10062
  Pb—Sn eutectic alloy, interlamellar spacing meas. 4=4650
  $PbSnS_2$, anti-phase domains 4=30563
  Pt, preferential orientation on prod. from $(NH_4)_2PtCl_6$ 0=11992
  Pt—Ag alloys, effect of spark discharges 0=16352
  Sb poly- and mono-crystalline films 4=10609
  $SbBr_3$ (Menshutkin) complexes, pyramids, rel. to nuc. quad. resonance 4=26456
  Sb_2S_3, sp. ht. correl. 0=13490
  Sb—Se, condensate, composition depend 4=23239
  Si, cleaved surfaces 3=23383
  Si, monocrystals, dendritic structure, rel. to growing conditions 2=803
  Si, 90° twins 4=30811
  Si, review 4=28413
  Si, X-ray investig. of perfection 4=4056
  SiC, polytypes, rel. to dislocations 4=2009
  Si(3.25%)—Fe, cubic texture, surface energy effects 4=10582
  Si—Fe, grain size, effect of grain boundary and surface energies, review 4=13622
  Si—Fe, rolled and annealed, "microband" contrast difference between, sub-grains 3=25739-40
  Si—Fe, rolled and annealed, microstructure study by electron transmission microscopy 4=23171
  Si—Fe, sheet, transformer, grain-oriented, after annealing 3=16098
  Si—Fe alloy, texture after cold-rolling and annealing 2=23887
  SiO_2 films 2=8884
  Si oxide films on Si surface 4=7564
  SiO_2, growth, effect substitution for Si 0=1884
  Sn, grain boundary segreg. of Tl 3=16118
  Sn, grain growth, effect of small impurity additions 1=15152
  Sn, grain structure, effect of Zn and Na traces 3=3334
  Sn, recrystallized surface, effect of Zn and Na impurities on grain growth 3=20760
  Sn, surface features and structures 3=18341
  Sn alloys, electrodeposited, structure 2=2401
  Ta films, microstructure and electrical props. 4=20812
  Ti, preferred orientation, effect on Hall coefficients 3=22906
  Ti, sputtered films, effect of dissolved gases 3=25328
  TiC—WC—Co 3=3316
  TiC—WC—Co alloys 3=18184

Crystal structure—contd
  TiC–WC–Co alloys, effect on compressive strength 4=15720
  TiH, proton resonance study 1=6437
  TiO$_2$, rel. to brookite–rutile transform. 2=10779
  Ti oxide film on metal surface, meas. 4=15808
  Tl azides, particle size changes on X-irradiation 3=22873
  TlCl, texture after compression 2=14928
  U, grains, unrefined, from ultrasonic pulse scattering 3=13496
  U polycrystals, effect of thermal cycling on microstructure 0=16254
  U, α-phase, recryst. after cold-rolling and annealing 4=10410
  U, recrystallization, secondary and after critical strain 4=2116
  α-U, single crystal extended to fracture 4=23222
  U–Cr alloys, grain refinement by cooling 3=3322
  U–Cr alloys, grain size and microstructure 4=30871
  UO$_2$, effect of neutron irrad. 4=22653
  UO$_2$, heat-treated, impurity phases 4=7679
  UO$_2$, high density, grain boundaries, thermal etching evidence 4=26700
  UO$_2$, microstructure, evolution during fuel rod irradiation 3=25650
  UO$_2$, over-sintered, grain-boundary precipitates in 4=7680
  V, grain size, rel. to plastic deform. 3=13351
  W, cast, effect of recryst. anneal 3=11183
  W ribbon, and emissivity 4=11324
  W wires, crystallite size and lattice strain 2=6861
  W wires, surface structure on d. c. passage 2=14930, 19040
  WC, rel. to high press. and temp. 4=22592
  WC–Co alloys, effect on compressive strength 4=15720
  WC–Co, macroscopic structure, rel. to electrical resistivity 3=13497-8
  WO$_3$, triclinic, domain structure, effects of stress 1=977
  W–Re alloys, by field ion microscopy 3=18340
  Zn, boundary migration after recrystallization 3=23407
  Zn, impurity substructure 4=2095
  Zn, polygonization in bent crystals, effect of solutes 2=8235
  Zn, size effects and microstructure changes, due to thermal cycling and external stress 4=13657
  Zn, substructure microsegratation and hardness 3=6792
  Zn–2% Au, rapidly solidified, regular cell pattern, etching obs. 3=23470
  Zn:Cd, Zn:Cu, fibrous substructure, effect of impurities 0=18303
  ZnFe$_2$O$_4$, grain growth and structure 2=4479
  ZnO nuclei, structure 4=4555
  ZnS, rel. to electroluminescence 0=4454
  ZnS, polar props. rel. to photovoltaic effect 4=22807
  ZnS : Cu, Mn, Cl films 4=20813
  Zn–Se, condensate composition depend. 4=23239
  Zr, rolling and recryst. texture 2=4363
  ZrO$_2$ films meas. 3=8577
  ZrO$_2$–MgO, elec. cond., monoclinic–tetragonal transition 0=4321

Al, recryst. nuclei formation obs. 4=13474
Al, recrystallization, after stretching 0=4599
Al single crystals, recrystallization 4=23325
Al, sub-grain structure, effect of thermal cycling 1=9109
Al, in u.s. field, role of insoluble impurities 4=26603
Al wires, and polygonization, from tensile testing 4=1925
Al–Be boride from Al melts 4=26592
Al–Mg–Si sheet, recryst., effect of heat treatment 3=6869

Crystallization—contd

Al–1·2% Mn, recrystallization 4=7473
Al–Si alloy, modification study on solidification 4=23329
Au single crystals, surface effect on recryst. 4=29055
$BaSO_4$, in aqueous solution 3=16040
$BaTiO_3$, microcrystalline, from glass 4=20725
Be, recrystallization and grain growth 0=16265
Be, recrystallization after high-temp. deformation 2=6836
Be, recrystallization, types 2=19032
Be boride, B-rich 4=26592
Bi, from melt, effect of elastic vibr. 3=18248
Bi, using Peltier effect 1=20438
Bi, solid–liq.front oscillation conditions 3=25664
Bi, in u.s. field, role of insoluble impurities 4=26603
Bi_2Se_3, from liquid, monotectic reaction 3=16107
Bi_2Te_3, using Peltier effect 1=20438
Cd, evaporated metal, in vacuum 3=16036
$Cd(OH)_2$, films, thin, by electrolysis, kinetics 3=16170
CdS films, recrystallizing technique 3=23396
CdS 3=18258
Cr, impurity phases distribution 3=15485
Cr, recrystallization, activation energy 1=14985
Cr, recrystallization embrittlement process 3=16005
Cr ferrite, recrystallization, effect of alloying elements 3=20900
$Cr_2(SO_4)_3.nH_2O$, hydration study 1=17897
Cu, epitaxial, electrocrystallization, imperfections 3=23415
Cu, high purity, recrystallization and polygonization 2=6835
Cu, recrystallization, after deformation 2=8733
Cu, recrystallization at low temp. 0=13950
Cu, recrystallization, mosaic structure 2=21049
Cu, recrystallization, rolling and annealing, X-ray
Cu, recrystallization rel. to sintering 2=6785
Cu, single crystals after surface deform. 0=3172
Cu strips, cold-rolled, recrystallization, effect of P 4=10576
$CuSO_4$, acceleration by u.s. waves 4=15759
Cu–Zn, recrystallization, after deformation 2=8733
Fe, cold-rolled, primary recryst. texture 3=18353
Fe, effect of Al and Fe_2O_3 additions 0=3173
Fe, N interstitial effect on recrystallization 4=22565
Fe, recrystallization, after deformation 2=8733
α-Fe, recrystallization, effects of C added 3=23484
Fe, recrystallization, kinetics of cold deformed Fe 2=23888
Fe, recrystallization, mosaic structure 2=21049
Fe–Co alloys, ordering, recrystalliz. 3=11296
Fe–Co alloys, recrystallization 4=1993
Fe–Co, recrystallation rel. to ordering processes 4=26598
Fe–Cr alloy, alloying 3=24097
Fe–Ni alloy, alloying 3=24097
Fe–Ni 50/50% alloy, recrystallization, rel. to grain size and impurities 3=16112
Fe–Ni–Al, directional, columnar structure 4=23344
FeO, recrystallization rel. to deformation 2=21422
Fe–3% Si, complex recrystallization texture 0=18291
Fe–3% Si, secondary recrystallization 0=16264
Fe–Si, secondary recrystallization mechanism 0=16263
Fe–Si, secondary, vacuum annealed 0=10285
Ge crystallized from Ge–In–Sb liq. alloy, impurity content 4=12737
Ge, dendritic, twinning and impurity segregation 2=14937, 19047
Ge, irrad. by neutrons and Xe^+ ions, displacement spike recrystn. 4=17461
Ge, recrystallization evidence after rolling at 700°-800°C 4=23153
Ge, recrystallization, triangular patterns 2=23810
Ge–Al–Sb, equilibrium, heterogeneous, Al–Sb interaction 3=20902
Hg, from vapour at low supersaturation 0=13951
Hg–Zn solutions 1=1371
InAs–GaAs system, complete phase diagram 3=16120
InSb–Te, liquid periodic temp. changes cause Te inclusions 4=23342
KCl, initial, theory 4=26607
KIO_3, in presence of 10-14% HIO_3 3=23405
Mg alloy, polycrystalline, {1012} twin bands, recrystallization within 4=23307
Mo, secondary recryst. at 2080°C 2=6371
NH_4NO_3, thermal transformations mechanism 2=6762

Crystallization—contd

Na paratungstate, from aqueous solns., dilatometry application 4=26609
NaCl, crystalloluminescence 4=7197
NaCl "Morphodrome" from phase diagram 3=16042
NaCl, under pressure, rel. to structure 0=16366
NaCl, recrystallization, after high temp. deformation 1=14874
NaCl, supersaturation, impurities, and crystal form 4=13514
$Na_2O–SiO_2$ glasses 0=4679
Na_3PO_4, acceleration by u.s. waves 4=15759
Nb films from vapour 4=2031
Nb, recrystallization-centre growth 2=19100
Ni, collective recryst., grain growth kinetics 3=20904
Ni, recrystallization centres, growth kinetics 3=20794
Ni, recrystallization, electron microscope study 0=21258
Ni, recrystallization, grain growth activ. energy 1=9108
Ni, recrystallization kinetics, use of "ghost" grain boundaries as markers 4=7675
Ni, on Si, hexagonal 3=25666-7
Ni–C, crystallization, effect of Bi, Ca, Li impurities 3=15115
Ni–Cr alloy, alloying 3=24097
Ni–Mo alloy, collective recryst., grain growth kinetics 3=20904
Ni–Ta alloy, collective recryst., grain growth kinetics 3=20904
P_2O_5, kinetics 3=23420
Pb films, vacuum evap., rel. to temperature 2=6469
$PbMoO_4$ (wulfenite), under hydrothermal conditions 4=26602
PbS deposition on doped Si crystal, giving impurity centre distrib. on Si surface 4=17794
$PbSO_4$, from soln., effect of additives 3=23402
Pb–Sb(2.45 wt. %), and superconductive critical field var. with aging 4=5520
Sb films, effect of metallic additions 0=14080
Sb films, influence of substrate 0=738
Sb, from melt, effect of elastic vibr. 3=18248
Sb, thin films 0=13949
Se 1=9101
Se 1=14967
Se, crystalline props. 1=9101
Se, dark-resistance variations, temp. depend. 0=10282
Se, on mica, crystallites study 2=21477
Se, spherulites, effect of doping and heat treatment 2=6780
3% Si–Fe, cold-rolled and annealed, recrystallization texture 1=1423-4
Si–Fe, deformed, substructures and recrystallization 3=23468
Si–Fe, effect of grain boundary and surface energies on recrystallization, review 4=13622
Si–Fe, hot-worked, recrystallization 4=23343
Si–Fe, recrystallization, mag. props. 2=12701
Si–Fe, secondary recrystallization, effect of atmosphere 4=4649
Sn, lamellar character, substructure 0=18305
Sn, nucleation catalysis in supercooled liquid 3=1270
Sn, surface recrystallization, effect of Na and Zn traces 3=3334
Sn, in u.s. field, role of insoluble impurities 4=26603
SnO_2 (cassiterite), under hydrothermal conditions 4=15766
$SrSO_4$, effect of phosphate additions 2=10794
Ta in Ge, distribution coeff. 2=2356, 6770
Te films, effect of impurities 2=8284, 14500
Te, using Peltier effect 1=20438
Te–Ge amorphous alloy, dendrite growth 3=1266
Ti–Mo alloys, recrystallization and grain growth 1=20610
U, from Belgium, recrystallization 2=12932
W crystals grown by recrystallization 3=13541
W, recrystallization kinetics 3=3333
W wires, doped, recrystallization texture, temp., deformation effects, 2=6834
W wires, recrystallization 2=808
W alloys, recrystallization temp. 4=23220
$Y_3Fe_2(FeO_4)_3$ (iron garnet) 1=14966
$Y_3Ga_2(GaO_4)_3$ (gallium garnet) 1=14966
Zn, evaporated metal, in vacuum 3=16036
Zn, recryst. obs. in deformed plate 3=23407
Zn, re-, polygonization, from stress–strain relations 4=7519

Crystallization—contd
Zn, in u.s. field, role of insoluble impurities 4=26603
Zn_2SiO_4 liquids and glasses, phases 4=23353
Zr, recrystallization texture 2=4363

Crystallography
See also Electron diffraction crystallography; Neutron diffraction crystallography; X-ray crystallography.
AX_2 structure types, two groups 3=23423
acentric unit cell with heavy atom, intensity analysis 3=23429
acoustic e.s.r. of Fe-group ions 2=767
acoustic paramagnetic resonance in S-state ions 2=20929
anisotropic tensor representations 0=16247
antiferroelectrics, from antipolarization vectors config. 2=2342
antisymmetry and colour symmetry group, rel. to 1-dimens real representations 0=13283
antitensors, definition and symmetry 4=21013
atom ionization, electric transfer study 2=6246
atomic close-packings, structurally diff., enumeration 2=21461
atomic parameters refinement by direct calc. of minimum residual 3=25701
atomic scattering factor for electrons, current status 2=22915
atomic scattering factors, aspherical, for S, S^-, Cl 2=4412
atomic scattering factors for electrons, calc. 2=22914
auxiliary integrals for lattice sums, evaluation 0=12035

Ca oxide coated cathode, optical energy levels 2=3073
$(Ca, Sr, Ba)F_2:Sm^{2+}$, absorpt. luminescence spectra 2=21242
Cd, electronic structure, calc. 0=9888
Cd, energy band structure 1=14207
Cd, Fermi surface 4=6793
Cd, Fermi surface from magnetoacoustic effect 3=22686
Cd, Fermi surface, pressure depend. 4=4023
Cd, Fermi surfaces, open cross-sections 3=17687
Cd films, conduction and interband transition and u.v. absorpt. 4=10164
Cd, l.f. magnetoplasma resonance meas. 3=8409
Cd, m.f.p. max. at 3°K from magnetoacoustic effects 4=6730
Cd, positron lifetime in 2=6306
Cd, spin—orbit splitting calc. 3=10626
Cd, spin—orbit splitting in energy structure 1=19737
$CdGeAs_2$, energy band gap and effective electron mass 4=1593

Crystals—contd
electron states—contd
$CdGeAs_2$, band gaps 3=8518
$Cd_xHg_{1-x}Te$, forbidden energy gap from optical absorpt. meas. 4=13027
$CdIn_2Se_4$, energy band symmetry 0=2891
$CdIn_2Te_4$, forbidden band width meas. 4=7121
$CdIn_2Te_4$, n-type, forbidden band width 4=6949
$Cd_3N_2(T_h^7)$ type, carrier energy bands 4=6786
CdS, band structure 0=11783
CdS, band structure 1=3619
CdS, from cyclotron reson., <4.2°K 4=28431
CdS, d.c. characteristics, majority carrier injection 1=19873
CdS, distributed traps, photocond. current noise 1=7671
CdS, double acceptor levels 3=15704
CdS, edge and impurity emission 0=658
CdS, effective masses, heavy and light 4=20257
CdS, electron distribution in pure and Cl-doped crystals 0=21193
CdS, electron–lattice interaction and band structure rel. to absorption edge 2=2225
CdS, electron mobility induced by X-ray pulses 2=12543
CdS, electron trapping parameters from conductivity glow curves 4=22532
CdS, energy barriers, electron irrad. study 0=604
CdS, energy terms linear in wave vector, optical effects 4=26181
CdS, energy transport, exciton emission data 4=13068
CdS, exciton lines, Zeeman splitting 0=533
CdS, exciton spectrum 0=2943
CdS exciton states and band structure 1=17475
CdS, excitons, rel. to absorption edge 0=13679
CdS, field inhomogeneities 2=8187
CdS, fine structure of photoconductivity spectra 0=7955
CdS, forbidden band defect states 2=8207
CdS, Hall mobility of photoelectrons 4=17528
CdS, hole diffusion and lifetimes, rel. to photo effects 2=8442
CdS, hot electrons, rel. to photoelectromag. anomaly 2=8443
CdS i.r. absorption bands rel. to double phonon process 1=17401
CdS, local-level parameters from i.r. impurity photoconductivity 4=1678
CdS, magneto-optics of excitons 0=7997
CdS, minority carrier motion rel. to elec. pot. distrib. 4=26037
CdS, mixed ambipolar and exciton diffusion 0=13525
CdS with Nd^{3+} impurity, ground-state splitting 4=7333
CdS, optical excitation, 2-step 2=23593
CdS, photocond. decay time, rel. to photo-electrons 1=19901
CdS, photocond. spectra struct. rel. to imperfection bands 2=8414
CdS, photocurrent carriers, effect of admixture of Au 1=19899
CdS, photocurrent effect of admixture of Au 2=4061
CdS, photoemission, spectrum rel. to internal distrib. 2=5372
CdS, shallow traps, frequency factor and energy distrib. 0=9991
CdS single crystals, surface states, photoconductivity investigation 4=28421
CdS, rel. to structure modification 3=8583
CdS, surface conductivity by field effect 1=17799
CdS, thermally-excited currents, heat treatment effects 1=14463
CdS, trapping level meas., electrical 3=20326
CdS, trapping levels, fast, meas. from photocond. 3=17846
CdS, trapping levels, from thermally stimulated conductivity curves 4=1595
CdS, unactivated 2=10485
CdS, valence band structure, quasi-cubic model 1=19983
CdS:Se, spin–orbit splitting 2=20956
CdSb 3=17685
CdSb, carrier mobility, from conductivity, Hall effect, temp. var. 3=25358
CdSb, density of states and effective mass 4=20356
CdSb, interminumum carrier scatt. 4=25887
CdSb, symm. and structure of energy zones 2=18552
CdSe, band gap 3=20327

Crystals—contd
electron states—contd
CdSe exciton states and band structure 1=17475
CdSe, from optical data 1=14570
CdSe, rel. to structure modification 3=8583
CdSe, toroidal energy surfs., evidence 2=10359
CdSn, symm. and struct. of energy zones 2=20965
CdTe, band gap, temp. depend., optical meas. 3=23067
CdTe, band structure 3=17979
CdTe, cond. band. min. 4=17400
CdTe, double acceptor centre, props. 4=17420
CdTe, double acceptor levels 3=15704
CdTe, effective mass and single-valley behaviour 4=28432
CdTe, fluorescence rel. to band splitting 1=17724
CdTe, min. energy for direct and indirect transitions 0=10028
CdTe, n-type, Fermi level position meas. 3=2758
CdTe, n-type, with In or Ga, cond. band model 2=16720
CdTe, valence band, l.c.b.o. method 3=779
Ce, f electron, virtual bound state model 3=2756
Ce, f electrons, and thermal expansion, low temp. anomalies 4=15433
Ce, as luminescence activator 2=6595
Ce, from mag. susceptibility 1=7734
Ce, spin effects on electronic transformations 1=7551
Ce, struct. from positron annihilation 4=17413
CeC_2 3=1328
$CeCl_3.7H_2O$, Ce^{3+} ion, from paramag. relax. 4=26380
Ce—Eu alloys, rel. to mag. props. and lattice structure 3=15757
Ce magnesium nitrate, energy diff. between 1st excited and ground states, calorimetric determ. 4=12641
Ce—S, polaron band model 1=17479
CeS, forbidden band width 4=6952
Ce_2S_3, forbidden band width 4=6952
Ce_2S_3, γ-phase, interaction with polar lattice 4=13028
Ce_3S_4, forbidden band width 4=6952
$Ce_{3-x}S_4$, conduction band structure 3=10628
Co, electron energy spectrum 2=16621, 20955
Co, energy band structure 1=14207
Co, exchange integral, from spin-wave resonance 1=2491
Co, Fermi surface area from n.m.r. 3=3197
Co, nuclear orientation and h.f.s. coupling 0=20786
Co, 3d electrons, density 2=3866
Co, 3d electrons, two-centre integrals 2=3862
Co, 3d-shell electron density 1=20116
Co^{2+} salts, i.r. absorption from L.S. splittings 0=1732
Co^{3+}, spin Hamiltonian 1=3934
Co alloys, impurity effects on d-band 3=10622
Co_2C_3 3=1328
$Co(CH_3COO)_2.4H_2O$, susceptibility meas., Co^{++} mag. moments 0=1783
Co complex oxides, valence states, X-ray data 4=6691
$CoFe_6^{3-}$, in various salts, spin-free $3d^6$ systems, Jahn—Teller effects 1=3831
Co—Mn spinels, with Li, Ti, Cu oxides 1=14357
Co—Pd alloy, internal field, temp. depend., using Mössbauer effect 1=1210
CoII coordination cpds. 0=4413-14
Cr, bond characterization 1=14617
Cr, Fermi surface 2=18547
Cr, rel. to K_{α_1} line 4=1427
Cr, plasma freq. and $M_{2,3}$ band, meas. by vac. u.v. transmission 0=20981
Cr, polycryst., Fermi surface area from surface meas. 3=2757
Cr, rel. to thermal expansion at 38 °C 1=19725
Cr, 3d band, Fermi surface 2=20966
Cr, 3d band structure 2=14407
Cr, 3d band structure, tight-binding approx. 1=17446
Cr, 3d electrons 3=4833
Cr, 3d electrons, two centre integrals 2=3862
Cr^{3+}, in Al_2O_3, transition probabilities for $d\epsilon^3\ {}^2\Gamma_3$ 0=11939
Cr alum, crystalline field strength, calc. 0=20720
Cr alum, e.s.r. fine structure, Cr^{3+} ground-state splitting 0=21073
CrB, bond characterization 1=14617
Cr—Fe alloy, phase transformations, electron shift 1=20585
Cr_2O_3, bond characterization 1=14617
Cr_2O_3, kinetics of Nb_2O_5, V_2O_5 donor addition 4=30535
Cr^{3+}—Rh^{3+} ternary oxides, isomorphous 2=4425
$CrS_{1.17}$, bond characterization 1=14617

Ni^{2+}, spin polarized, electron densities and mag. form factors 0=20769-70
Ni alloys, impurity effect on d-band 3=10622
NiAs type cpds., bond characterization 1=14617
Ni—Cu—Fe alloys, number of cond. electrons from Hall effect 1=14363
Ni ferromag. alloys, spin—orbit effect on transport processes 4=22679
NiO carrier narrow band, from Hall effect, temp. var. 3=20338
NiO. Ni^{2+} aspherical 3d electron distrib. 1=6103
NiO, semiconductor carrier mobilities, var. with Li impurity 3=20337
NiO, 3d-bands 3=25235
Ni–Pd alloys, band structure 0=20869
Ni–Pd alloys, band structure from heat capacity meas. 4=15428
α-$NiSO_4{\cdot}6H_2O$, $NiSO_4{\cdot}7H_2O$, ground level splittings 3=8644
Pb, cond. electrons, concn., velocity and collision frequ. 3=22677
Pb, d-band transitions assigned to far u.v. absorpt. edges 4=15446
Pb, density of states, max. near Fermi level 0=20772
Pb, electronic structure calc. 0=9888
Pb, Fermi surface, cyclotron resonance meas. 4=6793
Pb, Fermi surface, extremal dims. meas. 3=6472
Pb, Fermi surface, image 2=23115
Pb, Fermi surface image in lattice vibrations 3=6467
Pb, Fermi surface invest. by cyclotron resonance 2=8189
Pb, Fermi surf. invest. by cyclotron resonance 3=6494
Pb, Fermi surface model 1=17464
Pb, Fermi surface, model 2=23117
Pb, Fermi surface "necks", meas. method 3=25243
Pb, Fermi surface, second zone, magnetoacoustic meas., 270 Mc/s 4=15456
Pb, l.f. magnetoplasma resonance meas. 3=8409
PbI_2, transitions from split valence band to conduction band and exciton levels 4=26202
Pb—In alloys, Fermi surface wavefunctions 4=4428
PbO, electron–hole pairs, X-ray formation energy 2=2066
PbS, band edge structure, nearly-free electron model 4=25905
PbS, band structure, magneto-optical meas. 4=25904

Crystals—contd
  electron states—contd
    PbS films 1=1080
    PbS, n- and p-type band structr. 3=868
    PbS surface, slow states produced by H_2O vapour 4=25885
    PbSe, band edge structure, nearly-free electron model 4=25905
    PbSe, band structure from piezoresistance 3=15592
    PbSe, current carrier bands, structure 4=1615
    PbSe, effective electron mass 3=10904
    PbSe, n- and p-type, band structr. 3=868
    PbSe, p-type, forbidden-band width, press. depend. 3=17889
    PbSe–Bi_2Se_3 system, energy gap, rel. to composition 3=25742
    PbTe, band edge structure, nearly-free electron model 4=25905
    PbTe, band structure from piezoresistance 3=15592
    PbTe, band structure, relativistic effects 4=12693
    PbTe, charge carrier scattering 1=19916
    PbTe, charge carrier scattering 2=4082
    PbTe, effective electron mass 3=10904
    PbTe, effective masses, temp. dependence 4=25886
    PbTe, electron mobility at liq. He temp., theory 4=4041
    PbTe, electron scatt., on impurity ions, carrier relax. time 1=1081
    PbTe, high-temp. excitation, energy gap 1=17750
    PbTe, interminimum carrier scatt. 4=25887
    PbTe, mobility of carriers rel. to concn. 4=6783
    PbTe, n-type, multi-valley band structure confirmed by oscillatory magnetoresistance 1=6162
    PbTe, n- and p-type, band structr. 3=868
    PbTe, p-type, band structure 0=20920
    PbTe, p-type, majority carriers, large g factors, from Knight shift 4=4429
    Pd and its alloys, X-ray spectrometric study 1=19998
    Pd, cond. electron polariz. round mag. impurities 3=8709
    Pd, d-band structure, effect of spin—orbit coupling 4=28412
    Pd, density of states 3=13228
    Pd, density of states, peak position 3=13229
    Pd, Fermi surface of "fluted cylinder space pattern" type 4=26012
    Pd alloys, binary, simple band model 3=1126
    Pd—dilute Fe group alloys, mag. coupling, splitting of d orbitals 1=9018
    Pd(hydrogenated)–transition metal alloys 2=16675
    Pr, crystal field potential, calc. 0=11807
    Pr, 4f shell transitions, spectral lines 3=13182
    Pr_2C_3 3=1328
    $PrCl_3$, comparison with $NdCl_3$ 0=8015
    $PrCl_3$, crystal-field shielding 3=17629
    $PrCl_3$, electronic Raman effect 3=15694
    Pt, d-band structure, effect of spin—orbit coupling 4=28412
    Pt, s–d electron config., n.m.r. study 2=18967
    $PtSn_2$, d band, Knight shift data 3=5051
    Pu, α-phase, two-band model, holes and electrons 3=17824
    Pu, interband scatt., rel. to resisitivity anomaly 2=6412
    Pu, virtual bound states 2=23105
    PuC, band structure 4=28416
    Pu^{239}, $^6H_{5/2}$ ground-state splitting 2=4267
    Rb, thermal effective mass, from atomic heat 4=25852
    Re, data from de Haas—van Alphen effect 1=17931
    Re, energy band structure 1=14207
    Re, Fermi surface, by de Haas—van Alphen effect 4=12696
    Re, Fermi surface, galvanomag. meas. at 4.2°K 4=4123
    Rh, and de Haas—van Alphen oscills., mechanism 3=23137
    S, energy gap 4=28415
    S, monocrystalline, shallow traps, nature 4=25889
    S, orthorhombic, charge transport, 180°-370°K 4=30541
    Sb, anisotropic carriers, using magnetoacoust. reson. 3=4817
    Sb, band structure 1=19833
    Sb, carrier effective masses, from cyclotron resonance 1=14235
    Sb, ellipsoidal carriers, by de Haas—Shubnikov effect 4=6945
    Sb, Fermi surface, from magnetoresistance oscs., 1.2°K 4=4138
    Sb, Fermi surface, by Shubnikov—de Haas effect 4=9904
    Sb, Fermi surface tensor from cyclotron reson. 3=4851
    Sb, meas. using de Haas—van Alphen oscill. 3=4818

Crystals — contd
  electron states — contd
    Sb, pure and Sn-doped, band-doped 3=8513
    Sb, reciprocal effective mass parameters 4=25846
    Sb, transitions and g-factor, rel. to e.s.r. 2=12814
    SbI_3, band gap, from conductivity, electrical, temp. var. 4=1624
    Sb_2S_3 2=8350
    Sb_2S_3, band structure, group theory calc. 4=1434
    Sb_2S_3, energy band symmetry 1=4976
    Sb_2S_3, energy gap and valence band 4=1590
    SbSI 2=14653
    SbTeI band gap, from conductivity, electrical, temp. var. 4=1624
    Sc, energy band structure 1=14207
    ScN, from n.m.r. of Sc^{45} 4=23076
    Se, band model, optical props., 0.4-23 μ 1=2439
    Se, band structure in hexagonal crystals, exptl. 4=4019
    Se, band structure from optical and photoelec. props. 2=23107
    Se, carrier mobility and trapping centres 3=873
    Se, effective mass, from refl. Faraday effect 4=13055
    Se, from photodepolarization, nonlinear 3=20417
    Se, states density in forbidden gap 3=13081
    Se-type chain lattice, energy bands 1=11178
    Si, acceptor levels after γ-irrad. 4=6788
    Si, acceptor states, binding energy and eigenfunctions 4=28706
    Si, acceptor states, collective strain splitting 4=20239
    Si acceptors, spin—lattice relax. calc. 4=12617
    Si, anisotropic scattering, on ionized impurities and acoustic phonons 4=1424
    Si, band gap. 3=8509
    Si, band gap, temp. var., as for Au—Si surface barrier height 4=15550
    Si, band structure, from i.r. absorption 1=6210
    Si, band-structure, tight-binding approx. 2=3868
    Si bicrystals, grain boundary states 3=13064
    Si, Brillouin zone, selection rules for radiative transitions and intervalley scatt. 1=14217
    Si, carrier lifetime, 85-300°K, n-type 3=20320
    Si, carrier radiative capture by impurity atoms 4=30540
    Si, compensated, single injection meas. at low temps. 4=20377
    Si, cond., density at nucleus, from Overhauser effect and spin relax. 4=20244
    Si, cond. and valence levels, general strain effects 4=4020
    Si, crystal potential and energy bands, self-consistent calc. 0=9970
    Si, on donor centre, interact, with phonon 4=17393
    Si, donor spin—lattice relaxation and g-factor 0=11612-13
    Si, effect of Ni impurities 4=4173
    Si, electron energy losses in thin film 3=20154
    Si, electron—hole pair prod. by α-particles 3=17677
    Si, electron scatt. at cleavage surfaces 3=4857
    Si, electronic band structure, theory and expt., review 4=12895
    Si, electronic structure of impurity transition metal ions 0=17960
    Si, energy band structure, band gap, carrier mobility and recombination, review 4=28413
    Si, energy bands, detailed calc. pseudopotential method 4=20247
    Si, energy levels of radiation defects 2=18688, 23362
    Si, exciton energy levels 0=11607
    Si, in external mag. field, calc. 2=8346
    Si fast surface states, rel. to heating 4=10066
    Si, around Fe^{57}, from Mossbauer effect n and p type diff. 4=15404
    Si, Hall mobility and $\mu_H/\mu_{\parallel}$, temp. depend. 4=15542
    Si, heavily doped, plasma oscillations in n-type 4=22550
    Si, heavily doped, transitions rel. to energy depend. of absorpt. spectrum 4=26198
    Si, heavily doped, valence band 3=15688
    Si, heavy holes, ⟨110⟩ swelling const. energy surface 3=25236
    Si, hole effective masses, calc. 3=17864
    Si, hole mobility, temp. depend., discrepancy 3=17863
    Si, impure, electron–phonon interact. 4=4276
    Si, incoherent small-angle X-ray scatt. 4=17581
    Si, ionization rates of holes and electrons, meas. 4=17395
    Si, $J = \frac{3}{2}$ valence-band edge, uniaxial strain effects 3=4797

Al, zone-refined, with Cu, Mg additions 2=4391
Al, zone refined, grain boundary migration 4=13527
AlAgCu alloy 3=23394
Al—Cu alloy single crystals 0=18264
Al—Cu alloys, dendritic arm spacing 2=23817
Al—Cu alloys, solidification, use of u.s. vibration 4=23328
Al—Mg alloy, surface growth and whiskers 0=21168
AlN, by Frerichs method 1=11537
AlN, spiral, and polytypical investigations 3=18255
AlN, from vapour, temp. depend. 2=19050

Crystals — contd
growth — contd
AlN whiskers 3=8812
Al_2O_3 films 2=10937
Al oxide films, discontinuous, growth kinetics 4=29041
Al oxide, on heat-treated Al 1=4080
Al_2O_3, in molten PbF_2 4=29614
alumina, nucleation 0=3176
Al oxides, smoke particles in electric arcs 1=11563
Al_2O_3 spirals, on Al, during electropolishing 3=1261
Al_2O_3, whiskers 0=3183
Al_2O_3 whiskers, twist 1=11549
Al_2O_3 whiskers, by vapour deposition 4=7567
$Al(OH)_3$, needle and ribbon growth 2=16993
Al-rich intermetallic cpds, peritectic method, Čzochralski method 4=13525
$Al_2(SO_4)_3.K_2SO_4.24H_2O$, ultrasonic accel., octahedron face 3=25668
AlSb 0=4598
AlSb, with group IVB impurities 2=16714
AlSb, monocrystals and p—n junctions 1=19865
in Al—Si eutectic, modification due to 1A elements 4=13476
Ar, photomicrographical study 2=6772
Ar, vapour snakes 3=11224
As, epitaxy on monocryst. substrates 2=12896
As, from melt, purification 3=11225
As_4O_6, cubic, from vapour, crystal faces theory 4=10468
Au, colloidal, micro-crystal growth front 2=6774
Au, colloidal, spiral growth and moiré fringes 0=8162
Au-doped Ge by iodide vapour process 1=1060
Au, epitaxially on NaCl cleaved in vac. 4=29070
Au, evap. films, structure and mech. props. 0=21246
Au film, epitaxially on mica in v.h. vac. 4=23576
Au films condensed on Cu 0=734
Au films, epitaxial, in-situ meas. 4=29071
Au, films, evap. on C̄ 3=1375
Au, films, growth defects 2=6352
Au hexagonal form by condensation on Zn 0=4595
Au, on rocksalt, epitaxial 2=16996
Au, screw-like growth and moiré patterns, rel. to defects 0=11617
Au single-crystal evaporated film, dislocations 0=15839
Au, smoke particles in electric arcs 1=11563
Au, stacking faults, mechanism 3=20203
Au, and vacancy nucleation below 140°C 4=12724
Au, vapour-grown whiskers, twins 4=4527
B, floating-zone refining by electron beam melting 2=10800
B, pure 3=11226
B, single crystals by zone melting 1=14989
BN, cubic, semiconducting, preparation 2=12895
BN, synthesis of cubic form 1=6498
BP, from soln. and by vapour phase 0=9971
Ba acetate trihydrate, orientation 2=6815
$(Ba, Bi)FeO_3$, dendrites, composition 3=3277
Ba chromate, by precipitation, habit variations 1=14978
BaF_2, highly-perfect single crystals, for masers 3=23397
$BaFe_{12-2X}Ir_XZn_XO_{19}$, linewidth, rel. to composition 3=15878
BaO, adsorbed on W 2=17074
BaO single crystals 0=710
$BaTiO_3$, by evaporation 1=14988
$BaTiO_3$, by exaggerated grain growth 4=20724
$BaTiO_3$, films, epitaxy by vapour deposition 2=21492
$BaTiO_3$ films, monocrystalline 2=21568
$BaTiO_3$, floating-zone technique 4=23330
$BaTiO_3$, from melt, using Czochralski apparatus 2=12888
$BaTiO_3$ monocrystals, from BaF_2 melt 1=14993
$BaTiO_3$ from melt in oxygen atmosphere 4=23331
$BaTiO_3$, 1800°C furnace with oxygen atmos. 3=24094
$BaTiO_3$, spiral layers 1=14973
$BaTiO_3$, step formation 1=5091
$BaTiO_3$-type crystals 0=708-9
$BaTiO_3$–$BaSnO_3$ solid-solution single crystals 2=14950
$BaTiO_2O_9$, twinning 2=19039
$BaTiS_3$, synthesis 3=8850
$BaZrS_3$, synthesis 3=8850
Be whiskers on Mo 3=18278
BeO polar character 3=10884
Bi 4=12882
Bi and Bi oxides, smoke particles in electric arcs 1=11563
Bi, by Bridgman method 1=20444
Bi, controlled solidifcation from capillary 0=13667
Bi, epitaxy on monocryst. substrates 2=12896

Crystals—contd
growth—contd
Bi films, dislocation healing 4=23333
Bi, grain boundary mobility 2=4399
Bi, preferred growth orientation, effect of Sn additions 4=17783
Bi, by pulling, preferred orientation 1=1377
Bi single crystals, rapid-freeze method 4=23332
Bi alloys, solid—liquid interface 3=23393
$\{Bi_{3-2x}Ca_{2x}\}[Fe_2](Fe_{3-x}V_x)O_{12}$ 4=29043
Bi—Mn alloy, "spire" growth 1=14965
Bi_2S_3 4=10140
Bi–Sb alloys, single-crystal growth 4=23334
$BiSbTe_3$, freezing rate effects on thermoelectric props. 1=8969
Bi_2Se_3, from liquid, monotectic reaction 3=16107
$Bi_{24}Se_6Sb_{(60+x)}Te_{(150-x)}$, by Bridgman process, thermoelectric props. 4=29042
Bi_2Te_3 4=13530
Bi_2Te_3, dendritic, surface features 3=25679
Bi telluride, n- and p-type 1=9116
$Bi_4Ti_3O_{12}$, ferroelec. single crystals 4=23335
C, homogeneous and heterogeneous 3=18256
$CaCO_3.H_2O$, by slow precipitation 0=1907
CaF_2, highly-perfect single crystals, for masers 3=23397
CaF_2 monocrystals 1=14329
CaF_2, by zone melting 1=10239
$CaMoO_4$-rare earth niobate systems 4=26644
Ca phosphate, octa and hydroxyapatite, and struct. 4=17807
β-$Ca_2P_2O_7$, by hydrothermal synethesis 3=6827
during $CaSO_4.\frac{1}{2}H_2O$ hydration 4=20727
$CaSO_4.2H_2O$, nucleation, effect of var. subst. 4=20730
$CaWO_4$, Czochralski growth for laser prod. 2=23820
$CaWO_4$, defects 4=30817
$CaWO_4$, for maser applications 0=18310
$CaWO_4$, by rapid pulling from melt 3=25665
$CaWO_4$, trivalent rare earth substitution 4=15474-5
$CaWO_4$: Nd, rel. to laser threshold 4=19308
$CaZrS_3$, synthesis 3=8850
Cd dendrites, from vapour, twinning 0=21169
Cd, spirals on single crystals 4=29044
Cd, from vapour 0=21161
Cd, from vapour, condensation coeffs. 1=4022
Cd acetate trihydrate, orientation 2=6815
$CdAs_2$ 1=14462
Cd_3As_2 1=14462
Cd–Cu, from melt, temp. meas. 2=21472
CdF_2 0=2823
CdF_2, highly-perfect single crystals, for masers 3=23397
CdF_2, from melt 2=6767
CdF_2, pure single crystals 2=4128
CdF_2 single crystals, pure and rare-earth-doped 3=3003
$CdGeAs_2$ 4=1593
$Cd_{0\cdot1}Hg_{0\cdot9}Te$ 4=28554
CdI, polytype 28 Hc, and screw dislocation theory 4=13584
CdI_2, and polytype prod. 4=26593
CdI_2, rel. to polytypism in crystal structure 2=10869
$CdIn_2S_4$ 1=10066
Cd oxides 1=11563
CdO 3=11227
CdO, single crystals, method 2=21482
Cd_3P_2 4=26036
CdS 3=20791
CdS, CdS: Cu, large, and photoconductivity 4=1679
CdS, from CdS powder in vertical furnace 1=10252
CdS, defects and growth 1=7574
CdS, dislocation structure and growth mechanism 4=25938
CdS, effect on form of velocity 3=25672
CdS films on non-cryst. substrates, Ag-activated 4=20804
CdS films on rocksalt, electron diffr. exam. 4=4670
CdS, hollow, by sublimation at high pressures and temps. 4=7548
CdS, hollow, in N_2 flow 4=10470
CdS, with hollow centres 4=29046
CdS, hollow wurzite type, and structure 4=29047
CdS, with improved photoconductivity, various methods 0=2908
CdS, introducing additives during growth 3=23395
CdS, large 4=7549
CdS, large crystals 3=17704

Ge, dislocation-free 0=1588
Ge, dislocation-free 1=4026
Ge, dislocation loops 0=20814
Ge, doping meas., nomograph technique 2=10477
Ge, double-crucible method 3=13418
Ge, epitaxial on CaF_2 4=10486
Ge, epitaxial films, formation conditions 4=7574
Ge, epitaxial growth, direct obs. 4=4564
Ge, epitaxial, iodide method, temp. 3=23417
Ge, epitaxial layer 3=18283
Ge, epitaxial layers, rate, rel. to doping 4=7573
Ge, epitaxial, from vapour, effect of elec. field 4=10488
Ge, epitaxial, using water vapour 4=4561
Ge, epitaxially, on Ge or GaAs, tunnel diodes 0=18025
Ge, epitaxy on single crystals, structure 3=3280
Ge, facet formation 3=6823
Ge, films, epitaxial, rel. to deposition parameters 4=20807
Ge films, epitaxial formation conditions 3=18284
Ge films, epitaxial, iodide process 4=10485
Ge films, epitaxially deposited 0=17938
Ge films, from gas phase 2=10792
Ge films, on Ge, epitaxy 2=8800
Ge, films, pyrolytic, etching is not necessary for low defects in growth 4=17844
Ge films, single-crystal, microzone melting technique 4=2125
Ge films, vacuum-deposited on Ge 3=23399
Ge, 5 kg single crystals 0=4593
Ge, Ga-doped, constitutional supercooling 3=13414
Ge, on GaAs 0=18026
Ge on GaP, epitaxial 2=10808
Ge, from gaseous phase using 2nd component 4=10471
Ge, growth conditions 0=4590
Ge, growth striations in contact with metals 0=16260
Ge, high purity, special apparatus 1=7851
Ge, highly doped, As 3=20792
Ge, from hollow cylindrical seeds 0=18311
Ge, improvement of pedestal method 0=12006
Ge, impurity doping in vapour growth 4=7555
Ge, interaction of In and Ga dopants 3=20793
Ge, interaction of O_2 and Al rel. to dopants 4=1606
Ge junction, vapour-grown, closed cycle iodide process 0=18023
Ge layers, epitaxial from molec. beam 2=21491
Ge layers, thin, conds. 2=8791, 10797
Ge layers, vapour dep. structure 2=19112
Ge, from melt, Fe and Sn segregation and solubility 1=11583
Ge, method for known impurity concns. 2=10791
Ge, from molten In or Pb 1=14970
Ge, monocrystalline layer, on Ge face 2=2355
Ge, monocrystals, use of Peltier effect 2=810
Ge platelets, twinned 3=20781
Ge, pulled, temp. distrib. meas. 4=13532
Ge, by pulling, dislocation-free 1=1378
Ge, regrowth from In melt 1=14969
Ge, segregation coefficients of Ga, In, Sb and Bi, concentration—dependence 4=7556
Ge, single crystal, with const. solute conc. 2=21476
Ge, single crystal, epitaxy from vapour 2=23826

Crystals — contd
growth — contd
Ge, single crystals, epitaxial vapour growth, closed-cycle process 0=18325
Ge single crystals, resistivity striations 1=12379
Ge, and striations, etching and elec. obs. 3=22786
Ge, supercooling and irregular growth 4=4547
Ge, surface, electron microscope exam. by replica 4=13646
Ge on surfaces of GaAs and Ge, epitaxy 3=20806
Ge, thin films 3=23398
Ge, transition detection, by autodecoration 4=2041
Ge, vapour-grown, incorporation of As 0=17967
Ge, vapour-growth, diffusion limited 4=26596
Ge, vapour growth, impurity doping 4=1470
Ge, web growth 4=13533
Ge, whiskers and needles 4=10480
Ge—Si alloy films, from vapour, on Ge 4=7554
Ge–Si alloys, by vertical recryst. zone method 4=10472
Ge—Si, floating-zone technique 4=7557
Ge–Si solid solutions, whiskers and needles 4=10480
He, climb of a dislocation in a twisted whisker 0=550
Hg whiskers 4=4559
$HgBr_2$ on mica, epitaxy 0=12012
HgI_2 on mica, epitaxy 0=12012
$HgIn_2S_4$ 1=10066
HgS, films 2=4495
HgS, raising-crucible method for single crystal growth 4=17781
HgS on rock salt crystals, epitaxy 3=16048
HgS, single crystals, from vapour 4=2029
HgS, 3 methods 2=8797
HgS, from vapour, effect of phase transform. 2=16976
HgSe, Bridgmann method 4=18543
HgSe by zone melting 1=17752
Hg—Zn solutions, crystallization 1=1371
In–Mg(50/50 at.), whiskers with 96%In 4=20738
In–Sb 1=11543
InSb crystal–melt interface, facets correl. with crystal growth mechanism 4=10475
InSb dendrites 4=7569
InSb, dendritic 4=15769
InSb, growth twins 1=7838
InSb, high-purity, preparation 1=7848
InSb, impurities in melt-grown crystals, orientation depend. 1=17520
InSb, impurity conc. rel. to temp. fluctuations 2=21473
InSb, from In and Sb seed crystals 0=3175
InSb, from the melt, effect of {111} facet on solute distrib. 0=21154
InSb, p–n juncns. 1=7651
InSb, phase separation, by centrifuging melt 4=4543
InSb, pulled, {100} facets 2=19041
InSb, review 1=6158
InSb, rotation, rel. to impurity striations 1=17519
InSb, web growth 4=13533
InSb by zone melting and pulling 1=7653
InSb, zone-melting, ultra-pure 4=23341
InSb–GaSb, Czochralski technique 1=20439
InSb—Sb, by eutectic crystallization 3=23401
In_2Se, extraction from melt for n and p-types 4=7558
Ir, rel. to field emission 1=16359
K, by condensation on Ag wire, in supersaturated vapour, diffusion effects 0=18309
K, needle-shaped 4=26606
K, rate of growth, rel. to vapour pressure 0=13961
K, from vapour, unit condensation coeffts. 3=3271
K whiskers 1=20445-6
K whiskers 4=4559
K whiskers, from vapour, by field emission 3=3276
$KAl(SO_4)_2.12H_2O$, rel. to movement and faceting 3=16034
KBr, dendrites, rel. to conc. distrib. in solution 2=23818
KBr, surfaces of melt grown ingots 3=23502
KCN, single crystal growth, and purification 4=26608
KCN by zone refining 4=8490
KCl, filament and point production 0=18315
KCl, metal dendrites, in prebreakdown phenomena 1=19933
KCl, metal dendrites in prebreakdown phenomena 2=8470
KCl, Pb impurity entry, rel. to vibration 4=30821
KCl, pure 1=12622
KCl, rate in O_2 and A atmospheres 2=18834
KCl, single crystal laminae 2=10795

Crystals—contd
growth—contd
KCl, from soln., rate and nucleation freq. 3=5084
KCl, surface features, Czochralski growth method 3=11218
KCl, whiskers 2=4394
KCl, whiskers, from aq. soln. 2=4395
KCl, whiskers, secondary and tertiary at 550° C 2=4394
KCl–KBr mixed crystals, defect props. 2=3912
$KClO_3$, single crystal laminae 2=10795
$K_3Co(CN)_6$, Cr-doped, for maser use 0=4520
$K_3Co(CN)_6$, impurity effects 0=6325
KI 3=20795
KI–TlI, temp. gradient, effect on TlI distrib. 1=20421
KIO_3, in presence of 10-14% HIO_3 3=23405
$KMnO_4$, directed, rel. to ultrasonics 3=16044
KNO_3, from supersat. soln., critical dimensions 2=21488
$K_2O—Nb_2O_5$, peculiarities 3=16033
K_2SO_4, cleavage planes rel. to growth faces 2=21469
K_2SO_4, impurity distrib. during crystallization 4=29062
La ethyl sulphate, with Ga and Ce ethyl sulphate impurities 2=19057
LaF_2, highly-perfect single crystals, for masers 3=23397
LaF_3, doped, single-crystal, Čzochralski growth 4=13542
LaF_3, single, by Czochralski method 4=23345
Li isotope separation by crystallization 0=1474
Li, single crystals 0=13983-4
LiF, from aqueous solutions, poisoning 0=21159
LiF, dry method 3=23404
LiF, films, evap. on C 3=1375
Li^7F, high-purity 3=18261
LiF, from melt, rel. to optical absorption 2=14949
LiF, with (OH) impurity 2=2079
LiF, ⟨100⟩ dielec. breakdown dendrites, structure 2=8775
LiF, single crystals in r.f. field and controlled atmosphere 4=29056
LiF whiskers 1=12627
LiF whiskers, strength 0=1889
LiF, yellow coloured 1=9120
$LiFeO_2$, from $Li_2O—B_2O_3—Fe_2O_3$ system, rel. to phase equilibria 4=7560
$LiFe_5O_8$, from $Li_2O–B_2O_3–Fe_2O_3$ system, rel. to phase equilibria 4=7560
Li hydride and deuteride single crystals 1=7697
MgAl ferrites 1=20440
MgAl ferrites, prep. and props. of monocrystals 2=4381
MgF_2, highly-perfect single crystals, for masers 3=23397
Mg ferrite, growth orientation 1=6494
Mg ferrites, free and forced orientation, Verneuil method 1=1374
$MgFe_2O_4$, Pb pyrophosphate as flux 3=5083
$MgGa_2O_4$ spinel from molten $PbO–PbF_2$ solns. 2=16984
Mg–Mn ferrites, free and forced orientation, Verneuil method 1=1374
MgO, Pb pyrophosphate as flux 3=5083
MgO, sintered, water vapour effect 4=23546
$MgO.Al_2O_3$ (spinel), flame-fusion growth 0=16033
$MgSO_4.7H_2O$, thermo-syphon method 0=4422
Mg_2Sn, from nonstoichiometric melts 3=2922
MnBi films, nucleation 0=11862
$MnCO_3$ in $MnCO_3—RCl—H_2O$, [R = Na, Li, K, Ca, Mn,-Co], 3=18267
Mn ferrite 1=10168
Mn_2Hg_5 2=10878
MnMg ferrites 1=20441
MnMg ferrites 2=4382
MnO whiskers 3=23413
$MnSi_{1.72}$, Czochralski method 4=29012
MnTi-base spinel 4=2032
Mn–Zn ferrite, effect of voids and inclusions 3=3269
Mo epitaxy, by partial molybdenite decomposition 4=29069
Mo, by floating zone refining and melting by electron bombardment 4=23349
Mo, torsion induced recrystallization 0=6328
Mo, torsion induced recrystallization 2=8785
MoO_3, anomalous 1=9110
Mo oxides 1=11563
Mo oxide, filament formation 0=6332
MoO_3 whiskers, hydrothermal cond., on $MoO_3—SiO_2$ 1=9119
NH_4Cl, crystallization centre formation from drop, under electric field 2=4387
NH_4Cl, dendrites, parallel arrays 2=2354

Crystals—contd
  growth—contd
    NH_4Cl, monocrystals, from solutions, effect of pectin 0=16262
    $NaBrO_3$, supersaturation effects, and dislocation theory 4=15764
    Na–$CdCl_2$, metastable centres, precipitation 1=12624
    NaCl, adsorption at crystal—solution boundary 4=20736
    NaCl, with divalent cation imps. 2=12438
    NaCl, face patterns, on heating, impurity effects 4=4553
    NaCl, growth form, effect of organic solutes 2=8789
    NaCl, holes and mosaic structure 3=1263
    NaCl lattice, OH^- ion introduction 3=8432
    NaCl, mechanism 0=16256
    NaCl, melt-grown, alkalinity 0=13943
    NaCl, on mica cleavage surfs. 2=8786
    NaCl, monocrystals, new layers, penetration of dislocations 2=4376
    NaCl, plastically deformed in solution and vapour, further growth 4=13548
    NaCl, pure 1=12622
    NaCl, in silica gel 0=13946
    NaCl, from sublimed vapour 0=711, 4596
    NaCl, surface features, Czochralski growth method 3=11218
    NaCl, TlCl-activated phosphors, afterglow depend. on preparation 0=8019
    NaCl, twisted whiskers 1=6504
    NaCl type in presence of ferro-, ferricyanide ions 2=12887
    NaCl whiskers 1=10242
    NaCl whiskers 1=20448
    NaCl, whiskers 3=20804
    NaCl whiskers, by vapour deposition 4=29065
    $NaClO_3$, speed 3=1262
    NaI:Tl, Kiropoulos' method, impurities 4=2035
    NaI:Tl, from melt, Tl distrib. 1=11542
    NaI:Tl, Tl distrib. during growth 1=14976
    NaI:Tl, 2-heater method, for large crystals 1=4025
    Na_xWO_3 2=2116
    Nb, using induction plasma torch 2=2365
    Nb—Sn films on Nb, by anodic oxidation diffusion and superconductivity 4=8571
    Ni 4=7537
    Ni, bicrystal seed orientation technique 4=23301
    Ni, cathodes, relation to adhesion and emission 3=19131
    Ni, dendrite, rate, in undercooled melts 2=23816
    Ni, electrodeposited, growth habits 4=23346
    Ni, epitaxially on NaCl cleaved in vac. 4=29070
    Ni films, by epitaxy 1=12664
    Ni, grain, with boundaries saturated with Ni–S liquid 4=10564
    Ni, from melt, substructures 3=1271
    Ni, plastic deform., recrystallization var. time, microscopic obs. 4=26604
    Ni, recrystallization, grain growth activ. energy 1=9108
    Ni, recrystallization temp. lowering, by zone refining 3=18263
    Ni, single-crystal films 2=8489
    Ni single crystal films, epitaxial growth 1=6318
    Ni whiskers, nucleation 0=16274
    Ni_5As_2, vapour grown with and without halogen 4=10543
    $NiBr_2$, spirals on platelets 4=26615
    Ni—Fe alloy films, by epitaxy 1=12664
    Ni—Fe(80/20) on CaF_2, orientation depend. on substrate temp. 1=9028
    $NiFe_2O_4$, flux growth by Czochralski method 3=16043
    Ni ferrite, growth orientation 1=6494
    Ni ferrite, single crystals, from molten Pb oxide 3=3270
    Ni ferrites, free and forced orientation, Verneuil methods 1=1374
    Ni oxides 1=11563
    Ni, on Si, hexagonal 3=25666-7
    NiO, epitaxial growth on Ni 1=15015
    NiO, epitaxial growth on Ni (111) face 4=7702
    NiO, on Ni crystals 0=1894
    NiO on (111) Ni surface 3=11240
    NiO_2Cu 3=8856
    NiO_2Na 3=8856
    Ni_3O, on Ni surfaces 3=18264
    Ni—Zn ferrite, effect of voids and inclusions 3=3269
    Ni—Zn—Co ferrites 3=23190
    Pb, large single crystals 0=13976

Crystals—contd
  growth—contd
    Pb, large single crystals 1=14987
    Pb, large single, for neutron monochromatization 3=23403
    Pb and Pb oxides, smoke particles in electric arcs 1=11563
    Pb acetate trihydrate, orientation 2=6815
    Pb alloys, solid—liquid interface 3=23393
    PbF_2, forms occurring during different conditions, from liquid 4=4541
    $PbFe_{12}O_{19}$ (magnetoplumbite), synthetic, spiral formation 1=9113
    $Pb(NO_3)_2$ containing Capri blue, adsorption and habit 0=13954
    $PbNb_2O_6$, prep. and props. 2=14951
    PbS, Bridgman—Stockbarger method 3=18262
    PbS layer at lead/liquid sulphur interface 0=16259
    PbS, from melt, 100-200 atm. of N_2 3=18244
    PbS photovoltaic layers, growth directn. 3=3356
    $PbSO_4$, from soln., effect of additives 3=23402
    PbSe, covered by molten B_2O_3 pulling method 2=14956
    PbSe, growth by sublimation in vacuum radiation furnace 1=6984
    PbSe, large single crystals of controlled composition, from vapour 1=6497
    PbSe, layer at solid Pb/liquid Se interface 1=10230
    PbTe, n-type, with different electron concentrations 1=17747
    PbTe, Pb and Te precipitation 2=10491
    $PbTiO_3$, method of growing single crystals 2=21220
    $PbTiO_3$–$PbNb_2O_6$, prep. and props. 2=14951
    $PbTiO_3$–$PbZrO_3$, single crystals, prep. and props. 2=14951
    PbZr titanate 2=21475
    $PbZrO_3$–$PbTiO_3$ solns., by powder heating with fluxes 4=17786
    Pd films, epitaxial, in-situ meas. 4=29071
    PrF_3, highly-perfect single crystals, for masers 3=23397
    Pt, vapour grown whiskers, twins 4=4527
    Rh, rel. to field emission 1=16359
    S, spiral formation on screw dislocations in natural crystals 1=9112
    Sb, epitaxy on moncryst. substrates 2=12896
    Sb, oriented single-crystal square-sectioned rods 3=3264
    Sb, preferred growth orientation, effect of Sn additions 4=17783
    Sb, from vapour phase, growth triangles 4=2022
    Sb oxides 1=11563
    Sb_2S_3 2=8796
    Sb_2S_3, from vapour, rel. to S partial pressure 4=2023
    Sb_2Se_3 2=8796
    Sc by heat and compression 1=20427
    Se, rel. to Cl doping 4=2033
    Se dendrites, rel. to twinning 4=26611
    Se, filamentary, illumination effect 2=10802
    Se (monoclinic), from soln. 2=2170
    Se, ribbon-like, from vapour 1=11540
    Se, spherulites, effect of doping and heat treatment 2=6780
    Si 0=20911
    Si bicrystals, Dash pedestal method 3=11235
    Si, control of resistivity 0=4594
    Si, without crucible 1=7849
    Si, Czochralski method, liquid–solid interface shape 0=6326
    Si, Czochralski method, rel. to misorientation 4=2034
    Si, by Czochralski method, pulsations in growth rate 2=2352
    Si, diffusion coeffs. of impurities in melt 3=18803
    Si, dislocation-free growth from imperfect seeds 1=9115
    Si, dislocation loops 0=10814
    Si doped, distrib. coeff. and solid solubility 2=10382
    Si, doping meas., nomograph technique 2=10477
    Si, epitaxial 3=16046
    Si, epitaxial deposition technique 2=14966
    Si, epitaxial films, doping profiles meas. 3=10650
    Si epitaxial films, by H reduction of $SiCl_4$ 1=15013
    Si, epitaxial films, vacuum evap. 3=13424
    Si, epitaxial films, by vacuum sublimation 4=15822
    Si, epitaxial growth of films 3=5091
    Si, epitaxial growth from $SiCl_4$ 3=20797
    Si, epitaxial growth, stacking faults 3=805
    Si epitaxial layers, deposition conditions, depend. of dopant conc. 4=23356
    Si epitaxial layers, effect of rate on stacking-fault density 4=12771

Crystals—contd
  growth—contd
    Si, epitaxial, on quartz, orient. depend. 4=4563
    Si, epitaxial, stacking fault dislocation loop origin 4=6859
    Si, epitaxial, by vacuum sublimation 4=17796
    Si, epitaxial, from vapour, effect of elec. field 4=10488
    Si, epitaxially grown, X-ray analysis of stacking fault structures 3=25286
    Si, epitaxy 2=14965
    Si, epitaxy by vacuum evap. 2=21493
    Si, facet formation 3=6823
    Si, "faceting" effect 4=2042
    Si films free from stacking faults, by initial fast deposition 4=4659
    Si, films, pyrolytic, etching is not necessary for low defects in growth 4=17844
    Si, films on Si, epitaxial 2=19061
    Si, floating zone 3=18276
    Si, floating zone crystals, using arc image furnace 1=2529
    Si, by floating zone method 4=30564
    Si, from gaseous phase using 2nd component 4=10471
    Si, growth front distortions due to impurity 2=4379
    Si, high purity, floating-zone method 0=16268
    Si, improvement of pedestal method 0=12006
    Si, ingots, temp. distrib. calc. 2=14955
    Si junctions, epitaxial growth 3=23418
    Si layers, epitaxially grown, defects 3=804
    Si monocrystalline layers on Si 1=15014
    Si, monocrystals, dendritic structure, rel. to growing conditions 2=803
    Si, n—p—n type transistor production 1=3782
    Si, n-types, etching obs., non-uniform impurities 3=20782
    Si, 90° twins 4=30811
    Si, (111) face epitaxial layers, rel. to dislocations 4=2039
    Si overgrowths, mechanism 4=23357
    Si oxide films on Si surface, oxidation growth versus time, parabolic relation 4=7564
    Si, P-doped, Czochralski method, solute striations 4=4530
    Si, polycrystalline rods, without crucible 2=8790
    Si pyrolytic epitaxial films, structure defects 3=23515
    Si, ribbons, prep. conditions 2=806-7
    Si rod, chuck design for floating zone growth 1=10241
    Si, separated from gas phase, atomic significance 3=18268
    Si, single-crystal, on sapphire substrate 4=17795
    Si, single, dislocation free, by SiCl$_4$ dislocs. by H 4=4560
    Si, supercooling and irregular growth 4=4547
    Si, surface, electron microscope exam. by replica 4=13646
    Si thin layers, epitaxial growth 0=18326-7
    Si, vapour-grown, stacking-faults 3=22794
    Si, web growth 4=13533

    - Ag, interaction forces rel. to vibr. spectrum 3=2716
    - Ag transfer, in Al, effective charge 2=10416
    - Ag alloys, dilute, elec. gradients, ang. correl. meas. 4=22458
    - Ag alloys, dilute, electric field gradients, rel. to valence and size effects 3=22718
    - AgCl, Co^{2+} and Ni^{2+} impurities 3=15487-8
    - Ag dilute alloys, elec. field gradients, by Cd^{111} γ-ray ang. correl. 1=5588
    - Ag solid solns., charge density at Ag nuclei 2=4286
    - Al, force consts., by normal modes analysis 4=20192
    - Al, inner potential from X-ray K absorption spectra 1=12350
    - Al—Ag, nearest neighbour interact. energy 3=8886
    - Al—(0.11 at.%)Ag solid solution, elec. field gradient 4=22459
    - Al alloys, vacancy-zone interactions 2=6314
    - AlCl$_3$, nuclear quadrupole coupling const. of Al^{27}, and elec. field gradient parameter 4=12569
    - Al-Mg alloy, elec. field grad. at Al 2=4282
    - Al$_2$O$_3$, effect on Ni^{61}, n.m.r., h.f.s. 4=7334
    - Al$_2$O$_3$, elec. field gradient calc. 2=10297
    - Al$_2$ O$_3$, quadrupole interactions of V and Mu 4=3959
    - Al$_2$O$_3$, trigonal, energy levels calc. of Fe^{3+} 4=1356
    - Al$_2$O$_3$(V^{3+}), trigonal field parameter 2=23035
    - AlSb, internal force consts. calc. 3=10580
    - Al-Zn alloy, elec. field grad. at Al 2=4282
    - Al—Zn alloys, in GP zones during ageing 3=11295
    - Al—Zn, nearest neighbour interact. energy 3=8886
    - Am^{3+}(5f^6) in LaCl$_3$ 1=19991
    - Am IV in LaCl$_3$, energy levels, assignment of 10 lowest 4=20177
    - As, elec. field gradient 3=8332
    - As structure, elec. field gradient 3=8332
    - Au in Fe, Co, Ni, mag., Mössbauer obs. 4=20158
    - Au^{197} Mössbauer absorption, chemical shifts, theory 1=17391
    - Au—Fe, Au^{198} polarization 1=14155
    - Au—Ni, nearest neighbour interact. energy 3=8886
    - BaF$_2$, charge compensation by interstitial F$^-$, e.s.r. obs. 4=22460
    - BaO. 6Fe$_2$O$_3$, mag. field meas. using Mössbauer technique 4=12591
    - BaTiO$_3$ 1=14151
    - BaTiO$_3$ 4=29095
    - BaTiO$_3$, covalent bonds, from lattice dynamics 2=20918
    - BaTiO$_3$, force consts. Ba—Ti—O 3=25180
    - BaTiO$_3$, lattice field probed with rare earth ions 2=14353
    - Be, electric field gradient, calc. 1=11143
    - BeO, electric grad., contrib. of O dipole moments 4=12568
    - Bi, elec. field gradient 3=8332
    - C$_{3h}$C$_{3v}$ symmetry, paramag. ions ground states 2=20905
    - CaCO$_3$, e.s.r. data of Mn^{2+}, pressure depend. 4=1880
    - CaF$_2$, charge compensation by interstitial F$^-$, e.s.r. obs. 4=22460
    - CaF$_2$, Dy^{3+} e.s.r. in cubic field 1=3933
    - CaF$_2$, from e.s.r. of trivalent rare-earth ions 4=20585
    - CaF$_2$, rel. to paramag. resonance data 4=12601
    - CaF$_2$:Dy^{3+}, symm. and energy levels 3=25481
    - CaF$_2$:Nd^{3+}, crystal field splitting 3=13167
    - Ca fluorophosphate, Mn^{2+} impurity 3=13168
    - CaI$_2$, electric field gradient, calc. 1=11143
    - CaO, covalent bonding, evidence from e.s.r. data 3=25576
    - CaO, rel. to MgO, e.s.r. expts. 3=3181
    - CaTiO$_3$, rel. to Ca ion polariz. and charge 2=16774

Crystals—contd
internal fields—contd
CaWO$_4$, Ca^{2+} site, point charge model 3=12902
CdF$_2$ 3=8522
CdI$_2$, electric field gradient, calc. 1=11143
CdS, elec. potential distrib. 4=26037
CdS, field around Nd^{3+} impurity 4=7333
CdS, from mag. suscept. of Ni^{2+} 4=17616
CdSe, cubic and axial field parameters 3=11115
CdTe, lattice distortion by Mn^{2+}, e.s.r. det. 3=25167
CdTiO$_3$, electric 3=12903
Ce : LaAl$_2$, crystalline Stark splitting of Ce^{3+} 3=20071
Ce Mg nitrate, ordered spin T → O°K 4=28317
CeMg nitrate, pseudoquadrupole coupling of Pm isotopes 3=12906
Ce Mg nitrate, splittings 4=26381
Ce$_2$Mg$_3$(NO$_3$)$_{12}$, splittings, mag. data 3=8333
Cl$_2$, intermolecular forces, space group calc. 4=23432
Cl$_2$, solid, elec. field gradient asymmetry 3=15411
Co, magnetic, from nuclear Zeeman effect of Au^{197} 4=9811
Co, due to polarization of conduction electrons 1=6273
CoBr$_2$, electric field gradient, calc. 1=11143
Co complexes, distortion of octahedral charge distrib. 1=1287
CoFe$_6^{3-}$, in various salts, spin-free 3d^6 systems, Jahn—Teller effect 1=3831
Co$_{0\cdot3}$Fe$_{0\cdot7}$, from nuclear mag. spec. ht., 1.6-4.2°K 1=8882
Co^{2+} hydrated salts, crystalline electric fields 1=14698
CoI$_2$, electric field gradient, calc. 1=11143
Co$_m$Mg$_{2-m}$TiO$_4$, cation distrib. parameter, determ. from mag. moment meas. 4=13231
Co—Ni alloys, dilute, at Ni 3=3199
CoO, h.f.s. of di- and trivalent Fe^{57}, by Mössbauer effect 1=17945
CoO, at O nuclei, O^{17} n.m.r. meas. 4=13349
Co–Pd, at low temp., Mössbauer study 2=4216
Co phthalocyanine, and spectra, absorpt. 3=20495-6
Co spinel, molecular field treatment, giving Curie—Weiss consts. 4=13231
Co$_m$Zn$_{2-m}$TiO$_4$, cation distrib. parameter, determ. from mag. moment meas. 4=13231
Cr^{3+} ions in crystals, molecular orbital theory 3=13163
CrO$_2$, anisotropy energy calc. 3=15413
CrO$_2$, anisotropy energy, erratum 4=15397
Cr$_2$O$_3$ and ruby, comparison 3=15675
CrTe, Mössbauer study 3=25169
Cu^{2+} in octahedral surrounding 3=25564
Cu^{2+} spectra effect of tetrahedral field 4=12571
Cu alloys, dilute, strain contrib. to nuclear quadrupole interactions 1=17389
Cu-base alloys, quadrupolar field at Cu nucleus, origin 1=20630
CuCl$_2$. 2H$_2$O, elec. field gradients calc. 4=3958
CuFe$_2$O$_4$, Jahn—Teller distortion, cubic—tetragonal phase transform. 3=11205
Cu p-iodobenzenesulphonate, I^{131} nuclear alignment at 0.03°K 1=616
Cu$_2$O, elec. field from charged defects 4=1440
Cu$_2$O, elec. field, effects of neutron and γ-ray irrad. 2=23555
Cu$_2$O, irradiated, effect on exciton spectra 2=2105
Cu phthalocyanine, and spectra, absorpt. 3=20495-6
Cu$_3$VS$_4$, sulvanite, Madelung's coeff. 4=22449
Dy^{160}, effect on $\gamma-\gamma$ ang. correlation, nuclear moment det. 1=9834
Dy, temp. var. from Mössbauer effect 4=12588
Dy^{3+}, electron structure, in cubical Stark potential 3=8377
Dy^{3+} ethyl sulphate, calc. 2=552
DyFe garnet, from Dy^{161m} γ-ray resonant absorption 1=11454
DyFe garnet, at Fe nuclei in a and d lattices, by Mössbauer absorption 1=7769
Dy Fe garnet, Mössbauer effect 3=994
Dy$_2$O$_3$, low-lying energy levels 3=20106
Er^{166}, effect on $\gamma-\gamma$ ang. correlation, nuclear moment det. 1=9834
Er^{3+} in CaF$_2$ matrix, splitting 4=20454
Er^{3+}, electron structure in cubical Stark potential 3=8377
Er in Er(C$_2$H$_5$SO$_4$)$_3$. 9H$_2$O 1=9967
Er^{3+} in LaF$_3$, energy levels 4=28684
Er(C$_2$H$_5$SO$_4$)$_3$.9H$_2$O, parameters for Er 3=12900
Er ethylsulphate, thermal study of field splitting 3=4799

Crystals—contd
internal fields—contd
Er$_2$O$_3$, low-lying energy levels 3=20106
(Er,Y)$_2$O$_3$, equiv. Er ions interact. 3=10565
Eu, h.f.s., Mössbauer effect meas. 3=17631
Eu, mag. field at nuclei meas. 4=12642
Eu, nuclear polarization and hyperfine field 4=28318
Eu^{2+} cubic splitting in BaO 4=20152
Eu benzoylacetonate chelates 4=28753
EuFe garnet, hyperfine interact. of Eu^{151} 4=1343
EuFe garnet, mag. and elec., at Eu 3=12904
EuFe garnet, mag. field and elec. field gradient at Eu nucleus 4=25805
EuFe garnet, rare-earth ion mag. hyperfine interact and electronic relax. 2=20908
EuFe garnet, Sm^{3+} mag. hyperfine interaction 2=12647
EuS, nuclear polarization and hyperfine field 4=28318
EuS, second-neighbour exchange interact. 3=15781
Fe, at Co^{57} nuclei, using Mössbauer effect 1=8677
Fe^{57}, d-electron antishielding factor 4=12587
Fe-group ions in fluoride crystals 3=20043
Fe, internal field, temp. depend., using Mössbauer effect 1=1210
α-Fe, lattice binding forces 3=2984
Fe Laves phases, Mössbauer effect 2=3816
Fe, mag. field at nucleus, contrib. of exchange polarization of core electrons 1=3628
Fe, mag. field at nucleus, contrib. of Fermi contact term 1=3629
Fe mag., at In^{114}, Re^{186}, Ir^{192} from β asymmetry at 0.1°K 4=20157
Fe^{57}, mag., from Mossbauer effect, temp. var. near Curie point 4=13190
Fe, magnetic, from nuclear Zeeman effect of Au^{197} 4=9811
Fe, from Mössbauer effect, 4-1300°K 3=6457
Fe, from Mössbauer effect under high press. 4=28327
Fe, due to polarization of conduction electrons 1=6273
Fe, by Sn^{119} Mössbauer effect 1=10961
Fe^{2+} ions in oxides, rel. to paramag. props. 2=18892
Fe^{3+} in cubic field, optical spectrum and ground-state splitting 4=20463
Fe^{3+} quadrupole coupling const. in rare-earth iron garnets 4=12575
Fe alloys, dilute, mag., external induced, Mossbauer obs. 4=30496
Fe^{57} alloys, hyperfine 4=12559
Fe alloys, rel. to nuclear β-radiation 3=2417
Fe—Al alloys, from Mössbauer spectra 1=14687
Fe—Al (0-50 at %), magnetic, at Fe^{57}, Mossbauer obs. 4=12562
Fe–Al, magnetic, Mössbauer obs. 4=12564
Fe$_3$Al, ordered, internal mag. field 3=8334
FeBr$_2$, electric field gradient, calc. 1=11143
FeCO$_3$, magnetic, Mössbauer effect study 4=28410
Fe—Co alloys, hyperfine field and Fe atomic moment, by Mössbauer absorption 1=10135
Fe complexes, nuc. quadrupole interact 3=12905
Fe cpds., complex and covalent bonds, Mössbauer study 3=12894
Fe cpds., from Fe^{57} Mössbauer data 3=22629
Fe—Cr and Fe—Mn, lattice binding forces 3=2984
FeF$_2$, at Fe^{57} nuclei, from Mössbauer effect 1=1197
FeF$_2$, magnetic, Mössbauer effect study 4=28410
Fe garnets, rare earth—Fe anisotropic exchange interaction 4=22469
FeI$_2$, electric field gradient, calc. 1=11143
Fe — Ir, Re, mag. at Ir, Re nucleus, from nuclear specific heat 4=17331
Fe$_4$N, hyperfine field rel. to mag. structure 2=10299
Fe—Ni alloys, hyperfine field and Fe atomic moment, by Mössbauer absorption 1=10135
Fe—Ni invar-type alloys, mag. fields, Mössbauer meas. 4=28813
(Fe, Ni)$_4$N, hyperfine field rel. to mag. structure 2=10299
Fe oxides, Mössbauer study 2=6663
γ-Fe$_2$O$_3$, from Fe^{57} Mössbauer effect 1=9037
γ-Fe$_2$O$_3$, mag. field at nucleus, by Mössbauer effect 1=14745
Fe$_3$O$_4$, anisotropy of hyperfine interaction 2=12642
Fe$_3$O$_4$, hyperfine at low-temp. transition 4=4510
Fe$_3$O$_4$(magnetite), from Fe^{57} Mössbauer effect 1=9037

Crystals—contd

internal fields—contd

- Fe_3O_4, Mössbauer effect 3=994
- FeOOH, α and γ-phases, magnetic 4=22465

- $LaCl_3$, time reversal appl. symmetry, Tb^{3+} Eu^{3+} ions 4=28309-10
- La ethyl sulphate, from e. s. r. large quadrupole splitting 4=23048
- $LaMgNO_3$, from e.s.r. large quadrupole splitting 4=23048
- Li, electric field gradient, calc. 1=11143
- Li aluminate, elec. field by e.s.r. 2=12645
- Li ferrite, Fe^{57} hyperfine field, by n.m.r. 2=18962
- Li ferrite, mag. field at nucleus, by Mössbauer effect 1=14745
- Lu, elec. gradient along symm. axis 4=9854
- $MgAl_2O_4$, elec. field gradient calc. 2=10297
- $MgBr_2$, electric field gradient, calc. 1=11143
- MgI_2, electric field gradient, calc. 1=11143
- MgO, action on Fe^{3+}, e.s.r. meas. 3=2695
- MgO, cubic, from forbidden transitions in e. s. r. of Mn^{2+} 4=13325
- MgO, ^2E state of V^{2+}, strain-induced splitting 3=23108
- MgO, Ni^{2+} ion e.s.r. rel. to uniaxial pressure 2=10700
- MgO:Cr^{3+}, fluorescence Zeeman effect, expt. and theory 1=1180

Crystals—contd

internal fields—contd

- MgO:Cr, strain-induced fields, effects of fluorescence line 1=9007
- Mn^{2+} in cubic field, ground-state splitting, calc. 2=553
- Mn^{2+} in cubic field, optical spectrum and ground-state splitting 4=20463
- Mn^{2+} and Fe^{3+} ions, ground state splitting in low-symmetry fields 4=1353
- Mn^{2+} in $MgAl_2O_4$ spinel, e.p.r., zero-field splitting 3=8712
- Mn^{54}, nuclear polarization in Fe 3=17636
- $MnBr_2$, electric field gradient, calc. 1=11143
- MnI_2, electric field gradient, calc. 1=11143
- MnO, at O nuclei, O^{17} n. m. r. meas. 4=13349
- MnS, α, β, and γ-phases 3=20072
- MnSb, from n.m.r. meas. 2=18964
- Mn—Sn alloys, from Mössbauer absorption in Sn^{119} 1=621
- Mn—Sn alloys, by Sn^{119} γ-ray resonant absorption 1=9023
- MnTe, Mössbauer study 3=25169
- N, atomic, in crystals, zero-field splitting 4=25828
- ND_4 salts 2=6708
- NH_3, force constants 3=22566
- $NH_4FeAl(SO_4)_2.12H_2O$, e.s.r. study 2=23033
- $(NH_4)_2Hf^{181}F_6$, quadrupole, coupling of Ta^{181}, $d_{5/2}$ 4=6690
- $Na_2B_2O_7.10H_2O$ and $5H_2O$, at Na sites 3=25591
- NaCl, Born repulsive energy 3=2690
- NaCl, charge state and quad. splitting of Fe^{2+} 3=22630
- NaCl, CsCl type lattices, D parameter calc. 1=17388
- NaCl and diamond-type crystals, calc. 2=2040
- NaCl, ionic polarization at K^+ substitution 2=10377
- $NaI.2H_2O$, by Mössbauer effect in I^{129} 3=2367
- $Na_{0.5}La_{0.5}WO_4$ doped with Tb^{3+} relaxation processes 3=25176
- NaN_3, fine structure of trapped N atoms 3=25574
- $NaNO_2$, Na^{23} nuclear quad. coupling consts. 3=2696
- $NaTaO_3$, electric 3=12903
- Nd(IV) and Er(IV) 1=3504
- Nd ethyl sulphate, from γ-ray anisotropy of oriented Pm^{144} 1=3587
- Nd ethylsulphate, mag. h.f.s. coupling of Pm isotopes 3=12906
- Nd ethyl sulphate, Tb^{160} nuclear orientation in 1=623
- $Nd_2Mg_3(NO_3)_{12}.24H_2O$, absorption spectrum 4=7145
- Ni, magnetic, from nuclear Zeeman, effect of Au^{197} 4=9811
- Ni, rel. to Ni^{61} mag. moment 2=13970
- Ni, from Ni^{61} Mössbauer effect 1=5830
- Ni, by Ni^{61} n.m.r. 1=1281
- Ni, due to polarization of conduction electrons 1=6273
- Ni^{2+} and Co^{2+} complexes, effect of pressure 1=12492
- Ni^{2+} ions in oxides, rel. to paramag. props 2=18892
- Ni alloys, rel. to Ni^{61} mag. moment 2=13970
- Ni-base alloys, K state 3=5114
- Ni—Co, by n.m.r. 2=12649
- $NiFe_2O_4$, from Fe^{57} Mössbauer effect 1=9037
- Ni ferrite, mag. field calc. 2=10690
- $Ni^{2+}.6H_2O$ complex, orthorhombic field theory 3=20053
- $[Ni(H_2O)_6]^{2+}$ complex, symmetry 4=6683
- Ni_2In type, covalent bonding, spin scheme 2=6833
- Ni oxide, during oxygen adsorption 3=13573
- Ni phthalocyanine, and spectra, absorpt. 3=20495-6
- α-$NiSO_4.6H_2O$, $NiSO_4.7H_2O$, symmetrics 3=8644
- $NiSO_4.7H_2O$, deduced by proton resonance 1=20272
- OH stretching vibr, with strong H bonds 2=23050
- $PbTiO_3$, strong axial field, e.s.r. of Fe^{3+} 4=20595
- $PbZrO_3$, elec. field and dipole structure 3=22997
- Pr^{3+} in $PrCl_3$, contributions from orbitals 3=20054
- $PrBr_3$, electric field, effects on Pr^{3+} 3=10569
- $PrCl_3$, electric field, effects on Pr^{3+} 3=10569
- $PrCl_3$, spectra of Pr^{3+} analysed 1=19973
- Pr ethyl sulphate, crystal field parameters 4=13120
- Pr oxides, at Pr ions, rel. to mag. suscept. 4=13121
- Re—Fe, Re^{186} polarization 1=14155
- Rh, electric field gradient, calc. 1=11143
- Sb, elec. field gradient 3=8332
- Se, force constants, detm. 3=17630
- Si, electric, due to Sb, effect on Ga diffusion 4=28484
- Sm^{3+} and Dy^{3+} levels in $LaCl_3$, crystal-field splitting 3=2692
- Sn, interaction energy of Sn^{119m} and electric field gradient 1=9806
- Sn, Sn alloys, from Mössbauer effect 4=20153

Crystals—contd
internal fields—contd
Sr, Ba, Pb nitrates, ionic and covalent binding 2=6580
SrF$_2$, charge compensation by interstitial F$^-$, e.s.r. obs. 4=22460
SrMoO$_4$ doped with Tb^{3+} relaxation processes 3=25176
SrO, weak cubic crystal field, evidence from e.s.r. data 4=28886
SrTiO$_3$, axial Fe^{3+} e.s.r., due to nearest-neighbour charge compensation 4=23047
SrTiO$_3$, electrets 4=22780
SrTiO$_3$, force consts. Sr–Ti–O 3=25180
SrTiO$_3$, force scheme rel. to lattice dynamics 2=16589
Tb, effect on $\gamma-\gamma$ ang. correl. of Dy^{160} 1=9834
Tb, specific heat study, 0·37° to 4·2°K 3=771
Tb^{3+} in LaCl$_3$ 3=15689
α-TeO$_2$, Mössbauer study 3=25169
TiO, analysis of diffuse refl. spectra 3=23040
TiO$_2$, anatase and brookite, elec. fields 3=20052
TiO$_2$, from e. s. r. of Gd^{3+} 4=10322
TiO$_2$ (rutile), electric field 2=16585
TiO$_2$ (rutile), Lorentz corrections, calc. 2=2201
TiO$_2$,rel.to transition metal ion e.s.r. 4=26432
Ti$_2$O$_3$, analysis of diffuse refl. spectra 3=23040
Tm ethyl sulphate 1=6209
Tm, mag. field and elec. field gradient 3=8006
Tm^{169} (C$_2$H$_5$SO$_4$)$_3$. 9H$_2$O, electronic shielding, Mössbauer obs. 4=3965
Tm ethylsulphate, field splittings, thermal and mag. study 2=23032
Tm ethyl sulfate, oxide, trifluoride, electric, electronic shielding 4=30497
UFe$_2$, mag. fields at Fe^{57} nuclei 1=19686
V, hyperfine, at V^{51} nucleus 4=20626
V^{3+}, in corundum, mag. suscept. 3=20548
V alum, trivalent, mean susceptibility 3=20049
V–Fe, V^{48} polarization 1=14155
V$_{0\cdot33}$Fe$_{0\cdot67}$, from nuclear mag. spec. ht., 1.6-4.2°K 1=8882
Y ethylsulphate, thermal study of field splitting 3=4799
YFe garnet, effect on ferromag. res. line width 2=21353
YFe garnet, from Fe^{57} Mössbauer effect 1=9036
YFe garnet, at Fe nuclei in a and d lattices, by Mössbauer absorption 1=7769
YFe garnet, Mössbauer effect 3=994
YFe garnet, three sites, calc. 3=2693
YGa garnet, rel. to absorpt. spectrum of Er^{3+} 3=13172
YGa garnet, for Yb^{34}, 9 parameters 4=12560
Yb^{3+}, electron structure in cubical Stark potential 3=8379
Yb^{3+} in garnets 4=25806
Yb^{3+} in YGa garnet, 9 parameters 4=12560
YbFe garnet, exchange field splitting 2=23679
YbGa garnet, Γ_8 level, paramag. suscept. data 4=1846
Yb$_2$(SO$_4$)$_3$. 8H$_2$O, electric field about Yb ion 3=25510
Yb$_2$(SO$_4$)$_3$. 8H$_2$O, Yb^{3+} 2=16582
Zn, electric field gradient, calc. 1=11143
Zn transfer, in Al, effective charge 2=10416
Zn–0. 01 at.% Mn, dHvA effect 2=12643
ZnO, from mag. suscept. of Ni^{2+} 4=17616
ZnS, cubic and hexgonal, by Mn^{2+} e.s.r. 4=1882
ZnS, transition metal impurities, rel. to luminesc. 3=3054
ZnS:Mn, symmetry on Mn^{2+} activator 4=20494
ZnS : V, interpretation of luminescence 3=20530
ZnSe, from e. s. r. of Cr$^+$ meas. 4=13312
ZnTe, from e. s. r. of Cr$^+$ meas. 4=13312
ZnTe, lattice distortion by Mn^{2+}, e.s.r. det. 3=25167
ZrFe$_2$, anisotropic mag. h.f.s., Mössbauer meas. 4=22457
Zr$_{1-x}$U$_x$Fe$_2$, hyperfine field 3=15412
lattice mechanics

vibration potential calc. by group theory 4=22335
vibration spectra and anharmonic cohesive forces 1=11156
vibration spectra, calc. method 1=14161
vibration spectra, centre law 0=16050
vibration spectra of diamond-type crystals 3=17642
vibration spectra and dispersion relations 0=13485
vibration spectrum determination, by neutron scatt. 1=17397
vibration spectrum of disordered linear lattice 1=6069
vibration spectrum, effect on intrinsic elec. and thermal resistivity of metals 0=1554
vibration spectrum, effect on X-ray temp. factor 2=2379, 6801
vibration spectrum, from inversion of sp. ht. curves 2=570
vibration spectrum, inversion of specific heat function 0=20744
vibration spectrum, from Mössbauer effect 3=15414
vibration spectrum, 2-dimensional disordered lattice 2=14370
vibration, study by Mössbauer effect 4=25839
vibrational anharmonicity, effect on thermal X-ray scattering, 1=2372
vibrational freq. distrib. of single lattices, strain depend. 3=20081
vibrational freq. spectra of disordered chains, peaks 4=20186
vibrational freq. spectrum of random lattices 2=558
vibrational modes of disordered linear chains 2=3025
vibrational modes, disordered linear chains 3=22638
vibrational modes in disordered systems 3=10582
vibrational modes near impurities, optical absorption calc. 0=13486
vibrational modes in ionic crystals, nature 1=2371
vibrational specific heat, theorem, inflection point, generalization 4=1394
vibrational spectra of diatomic chains 1=14167
vibrational spectra of disordered chains 1=12825
vibrational spectrum of disordered chain, exact calc. 4=20188
vibrational spectrum, neutron scatt., effect of impurity atoms 3=25187
vibrational thermodynamic props., anharmonic contrib. 2=568-9

Crystals—contd
lattice mechanics—contd
vibrational thermodynamic properties, anharmonic contrib. 3=17640
vibrations anharmonicity, rel. to temp. effect on Mössbauer line shift 4=28320
vibrations, application of percolation problem solutions 3=13997
vibrations of atom of different mass in cubic lattice 3=12916
vibrations, effect of defects, calc. of thermodynamic props. 0=11569-70
vibrations, effect of local change of mass 2=12372
vibrs. and e. m. fields 4=28346
vibrations, e.m. wave interactions 0=16041
vibrations, freq. density, rel. to nuclear radiation 2=6253
vibrations, rel. to heat conduction 1=7541
vibrations, interaction with collective electron-gas oscillations 1=7561
vibrations, intermolecular coupling in molecular crystals 0=11566
vibrations of lattice with defects, theory 2=12370, 14367
vibrations of linear lattice containing impurities 2=16593
vibrations of linear lattices, model appl. to sp. ht. 3=8362
vibrations, local irregularities influence 4=28341
vibrations, localized, anharmonic attenuation, theory 1=7531
vibrations, localized, time-dependent problems 1=11150
vibrations, at melting point 1=3611
vibrations, at melting point 1=9984
vibrations modified by imperfections 2=3823
vibrations of molec. chains, theory 2=10311
vibrations with mol. impurity centres, theory 3=25183
vibrations in 1 and 3 dim., quantization into phonons, freq. spectrum exptl. determ. 4=15526
vibrations, particle—hole excitation theory 3=2719
vibrations, Raman spectra study, low temp. apparatus 0=12484
vibrations, rel. to random walk problems 1=11149
vibrations, review, phonon fields 2=3822
vibrations, theory 3=6464
vibrations, rel. to thermal expansion 0=13482
vibrations of triangular, honeycomb and Kagomé lattices 3=12915
vibrations, waveforms 1=17398
vibronic problems, electronic near-degeneracy 2=23052
virtual symmetry concept 4=22471
volumetric lattice energy, hardness theory for nonmetals 2=4348
wave scatt. by isotopes, resonance, theory 3=10595
waves, longitudinal, along linear chain of atoms, calc. 4=28342
wurtzite, lattice vibr. spectrum analysis 2=12374
wurtzite lattices, limiting vibrations 0=17879-80
wurtzite structure, atom tunnelling 3=22848
wurtzite struct., vibr. spectrum theory 4=30508
wurtzite-type, transition metal impurity site symmetry 2=3908
and X-ray calc. methods, anharmonicity effects 4=23390
X-ray diffr., line weakening, Debye factor 3=13437
X-ray resonant scattering, normal mode 2=3821
X-ray scatt., thermal, effect of anharmonicity 2=21575
zero phonon impurity line broadening 4=30689
zero-point energy of electron lattice 0=17904
zincblende structure, lattice vibr. spectrum 3=10580
zincblende structure, piezoelec. and elast. theory 2=12575
zincblende-type semiconductors, trends in lattice "combination bands" 2=16591
zinc blende type and wurtzite type crystals, optically active lattice vibrations 4=12605
Ag, characteristic temp. 1=4042
Ag, Debye temperature 1=17425
Ag, Grüneisen constant 1=17429
Ag, lattice-energy release 3=22779
Ag, lattice energy, theory 0=17874
Ag, sp. ht. near 0°K–300°K 0=2791-4
Ag, vibr. spectrum from metallic forces 3=2716
Ag, vibr. spectrum, model 2=23051
Ag–Al alloys, phonon scattering on Al atoms 2=23048
Ag alloys, lattice thermal cond., low temps. 2=23085
AgCl, phonon dispersion calc. on shell model 2=12378

Crystals—contd
  lattice mechanics—contd
    AgCl—AgBr mixed crystals, rel. to absorpt. tail 3=3020
    Ag—Mn alloys, electrons, inelastic scattering 1=14243
    Ag_2O, vibration amplitude 1=12347
    Ag—Pt alloys, phonon scattering on Pt atoms 2=23048
    $AgSbTe_2$—SnTe, lattice thermal cond. 2=18538
    Al, axisymm. model, dispersion curves 3=2711
    Al, Debye temp., calc. 2=3843
    Al, Debye, temp., temp. depend. X-ray method 0=20747
    Al, Debye—Waller factor, 4° to 500° K 3=20082
    Al, effect of temp. on X-ray reflection 1=14194
    Al, electron-acoustic wave interaction, 4°K 4=12633
    Al, electron—lattice interaction, rel. to u.s. attenuation and elec. cond. 0=1569
    Al foil, Debye—Waller factor for electron diffr. 3=22656
    Al, frequ. of normal modes, meas. analysis 4=20192
    Al, impurity nucleus, dynamics 3=20063
    Al, phonon dispersion 0=7846
    Al, phonon drag, in thermoelec. power 0=18078
    Al, sp. ht. near 0°K—300°K 0=2791-4
    Al, temperature effects on phonons, cold neutron study 1=4966
    Al, thermal and cold neutron scattering 0=20777
    Al, rel. to thermal expansion at low temps. 1=4971
    Al, two-phonon scattering of X-rays 0=7864
    Al, vibr. spectrum calc. 4=6706
    Al, vibration spectrum calc. by de Launay's method 3=2714
    Al—Ag solid solns., var. with Ag conc. of interatomic force 4=6707
    Al—Ag solid solns., var. with Ag conc. and temp., X-ray diffr. obs. 4=6708
    Al—Ag, X-ray diffr. and crystal lattice vibr., var. with Ag conc. and temp. 4=6708
    AlAs, atom displacements, 291-577°K 0=1563
    Al—Cu alloys, Debye temp., interatomic binding 0=1938
    Al garnets, energy calc. var. structures 4=3955
    AlO_2 (sapphire), phonon traject., and heat pulse propag., low temps. 4=25867
    Al_2O_3, α-phase, vibrational spectrum in i.r. 2=21252
    Al_2O_3, Cr^{3+} phonon—photon double-quantum transitions 1=6071
    Al_2O_3, i.r. lattice vibr. spectra analysis 4=4256
    Al_2O_3, phonon generation, coherent, via transducer of insulating CdS films 4=28353
    Ar, elastic relaxation around a vacancy 3=20100
    Ar, elastic waves, velocities 2=14375
    Ar, from H, D impurity 1s-2p transitions 4=30503
    Ar, longitud. polarized vibrations, interactions 1=905
    Ar, solid 1=6068
    Ar, solid, calc. of various props. 2=6270
    Ar solid, energy migration and transfer to methane impurities 2=20917
    Ar—H_2 solid solutions, vibrations 4=3855
    Au, lattice temp., from Au^{197} Mössbauer effect 0=11312
    Au, participation of electron gas in lattice vibrs. 2=6262
    Au, vibrational spectrum and lattice spec. heat 1=7530
    Au—Co alloys, phonon cross-section for Co 3=10614
    $Ba(ClO_3)_2.H_2O$, H_2O molecular motion, rel. to n.m.r. 4=6692
    BaF_2, vibrations, rel. to i.r. reflect. and transmission meas. 2=21236
    $BaF_2:Sm^{2+}$, vibronic spectra model 4=13085
    Ba $(NO_3)_2$, NO_3^- vibrations, effect of coupling 4=10163
    $BaTiO_3$, cubic, rel. to covalent bands and i.r. spectrum 2=20918
    $BaTiO_3$, rel. to ferroelectricity 3=898
    $BaTiO_3$, lattice vibr. calc. 4=20193
    $BaTiO_3$, oscillation spectrum, temp. effect 4=30677
    $BaTiO_3$, simple ion models 4=12612
    $BaTiO_3$, vibrations rel. to ferroelectric transitions 1=19928
    Be, dispersion for waves along [0001] and [01$\bar{1}$0], using slow neutrons 3=747
    Be, elastic constants, extrapolated to 0°K 0=1840
    Be, vibr. spectra, by root sampling method 4=20194
    Be, vibr. spectrum, from elastic consts. 3=10578
    Be, vibr. spectrum for inelastic neutron scatter 4=25840

Crystals—contd
  lattice mechanics—contd
    BeO, inelastic neutron scatt., multiphonon processes 3=12911
    BeO, neutron irrad., lattice dilation 2=4337
    BeO, neutron scatt., 5-6 A, 100-400° K, calc., one and two-phonon processes 3=20099
    Bi, electron—phonon interact., in proposed device 2=21112
    Bi, vibrations, nonlinear eqn. 3=25353
    Bi_2Te_3, acoustic phonons, anisotropic electron scatt. 1=7534
    Bi_2Te_3, structure-cell data, expansion coeffs. 0=4632
    C, spin—lattice relax., different carbonization temps. 4=1869
    CO, molecular rotation, calc. 0=15804
    $Ca_3Al_2(SiO_4)_3$, energy calc., var. structures 4=3955
    $Ca_xBa_{1-x}TiO_3$, phonon scatt. 3=20122
    $CaCO_3$ (calcite), oscillations of CO_3^{2-} ions 0=524

- Ag, Fermi surfaces, period and effective mass in "necks", meas. 4=28772
- Al, electron effective masses and orbits 3=22693
- Al, rel. to Fermi surface 4=12697
- Al, 35 kG 3=20559
- Al, use in determ. Fermi surface shape 4=6792
- Au, Fermi surfaces, period and effective mass in "necks", meas. 4=28772
- Au, 4.2°K, 100,000 G 3=23138
- Be, and Fermi surface 3=8401
- Be, prediction from Fermi surface 4=9900
- Bi, effect of pressure 4=28760
- Bi, and Landau level spin splitting 4=13107
- Bi with Sb impurities 2=4204
- Bi, Shubnikov, 0.5°K 4=17621
- Bi, for various orientations, at 0·08° -0·12° K 4=7210
- Bi—Te alloys, rel. to Te concn. 2=6654
- Bi_2Te_3 3=22939
- Bi_2Te_3, valence band structure meas. 3=25240
- Ca, Fermi surface det. 4=15455

de Haas–van Alphen effect—contd
Cd, at high mag. fields 4=22946
Cr, and magnetic structure 4=23027
Cs, period var. 3=20557
Cu, Fermi surface necks meas. 4=17622
Fe, internal magnetic field for conduction electron 3=20558
Fe whiskers 3=18060
Ge, heavily doped, magnetoresistance oscs., 4.2°K 4=28561
In, up to 18 kG, rel. to free-electron model 4=4325
InBi, first obs. in intermetallic cpd. 2=4202
InBi, at liquid He temp., temp. var. 4=30702
InBi at 1.5°K, 23 kgauss 2=18887
Mg, for mag. flds. nr. c-axis 3=20155
$MgZn_2$ and crystal Fermi surface 4=1799
Ni, and crystal Fermi surface 4=9907
Pb, 35 kG 3=20559
PbTe, u.s. absorption oscs. 4=6732
Rb 3=1122
Re, Fermi surface on A—L line meas. 4=12696
Rh, osc., due to changeover from isolated to compact electron orbits 3=23137
Sb, Fermi surface models, liquid He temp., calc. 4=28758
Sb, at liquid He temp., 23 kG 3=18059
Sb, magnetoacoustic oscill., carriers meas. 3=4818
Sb, magnetoresistance osc., 1.2°K, and Fermi surface 4=4138
W, compressional, shear wave vels. 2=16942
Zn 3=11029
Zn and alloy containing 0.01 at.% Mn 2=12643
Zn, band structure derivation 2=10352
Zn, low-field, model rel. to electron states 2=10641
Zn, rel. to u.s. absorption coeff. oscillation 2=6264
Zn; rel. to u.s. absorption coeff. oscills. 3=2723
Zn—Mn alloy 3=11029
Zr, in pulsed fields up to 190 kG 3=25502

Demagnetization
See Magnetization process.

Densitometry
abscissa meas., recording projection micrometer 0=4982
analysis of nuclear emulsion tracks 0=199
β-ray, for density behind hypersonic shock wave 2=64
blackening gradients, electronic detm. 3=16727
Chalonge microphotometer, improvements 0=19390
colour print evaluation 0=2259
colour, for temp. meas. 4=8481
contour mapping microdensitometer 0=5127
contrast of photographic images by multicolour development 2=22072
contrast transmission of sinusoidal signal, meas. 3=9633
densitometer, conversion to micro by attachment to microscope 4=16236
densitometer spot-profile definition, Callier effect, granularity 1=18634
differential microdensitometer 0=3593
differential spectrophotometric meas., use of photometric sphere 0=8793
of double exposures, effect of second on first 0=5190
electronic scanning microscope 2=5164
equal density lines, comparison of production methods 1=5349
equi-densitometry, 2-dimens. photometry and image anal. 5126
errors due to scatter, aperture size 0=2263
grain size importance in photographic microphotometry 0=150
integrating video microdensitometer 4=7595
interference microscopy method for spectral lines 1=18595
with intermittent double-beam photometer 1=4428
Joyce—Loebl microdensitometer, continuous chart and integrating device 0=14782
line widths in photographic spectrophotometry 0=6923
mass-spectrometer plates for positive ions 2=9653
microdensitometer for nuclear emulsion track profile meas. 3=534
microdensitometer for photoelectric fringe comparator 0=10748
microdensitometer, recording, for measuring interference patterns 1=232
microdensitometer for X-ray crystallography, automatic 1=20458
microdensitometers, energy-recording 2=103

Densitometry—contd
microphotometer, Möll, true-intensity attachment 2=22010
microphotometer for use with Vickers projection microscope 0=3594
microphotometric evaluation of images of small objects, 2-dimensional 2=22070
microscope, photoelectric scanning 3=16753
photoelectric, respirable dust samples applic. 0=14140
photographic dye images 3=5539
photographic, equal-density lines, variations meas. 1=18629-30
photographic photometry 0=6930
photographic photometry of large areas of images 2=22071
photographic radiometry, accuracy limit 0=6931
photometer—recorder device for spectroscopic densitometry 1=5344
recording optical density meter 1=6946
scanning microscope for photoelectric data evaluation 2=1260
smoke-plume photography, quantitative study 0=5191
tracks of heavy nuclei in nuclear emulsion 1=13254
u.v. absorption microspectrograph 1=18598
use of photoelectric photometer 2=13086
wedge-density matching, logarithmically sectored spectra 1=6951
wedge for low optical density meas. 0=6902
X-ray diffraction photographs, microdensitometry 4=23396

Density
all matter in form of galaxies 2=2554
boundary layers, compressible, turbulent 2=15533
critical, according to single phase region data 4=21365
critical point density fluctuations, theory 2=5218
earth's core, from shock wave data 0=8353
elastic-disk 2-dimensional system, at phase transition 2=17699
inhomogeneous media, rel. to velocity of sound 1=2816

gases
air–C mixtures, 8000° to 30 000°C, 1 to 150 atm 2=5069
air in ionosphere and exosphere 1=10318
arcs, electric, vacuum between Fe 4=18776
atmosphere, satellite data 0=10407-8
Comet 1942 g Whipple, partial gas density 1=18053
diagram expressions in power series expansion in density 4=24130
dimethyl ether + SO_2, HCl of fluoroform, press. var., and association 4=11258
distribution in planetary exosphere 0=835
effect on thermal diffusion of gases at low temps. 0=100
exosphere, rel. to false zodiacal light 2=4658
fluctuations, dilute gas 3=14209
hypersonic flow, dissociated, local atom concn. 3=9487
influence on viscosity coeff. 1=6877
interferometric meas., by amplitude, Fabry—Perot etalon 3=21564
methyl mercaptan (CH_3SH) vapour, above atm. press., temp. var. 1=15837
planetary exosphere 1=2602
shock waves, meas. rel. to Mach number, by electron beam method 4=14259
stratosphere, water vapour distribution above 90000 ft. 1=15226
TNT explosion products 0=14728
tensor behaviour in elec. field 4=14219
uniform field of force acting on gas 3=7238
upper atmosphere 0=1977
upper atmosphere, annual variation 1=10316
upper atmosphere, variations, model 1=10335
Ar, isentropic pressure–density curves 1=11789
Ar, in pulsed elec. discharge, interferometric study 0=12593
As 3=23838
CO_2, calc., 0°-1000°C, up to 100 bar pressure 4=5231
Cs plasma, spectral method 2=1447
D_2O, at high temp. and press. 4=2657
H plasma 1=18843
H_2, para, saturated, temp. var. 3=14424
HCl, to 400°C and 2000 bar, meas. 2=17509
H_2O vapour, in boiler, by radioactive tracer 4=16130
NH_3 vapour, above atmospheric press., temp. var. 1=15836
O_2 in shock waves, by u.v. absorpt. technique 4=18341

Density—contd
- **liquids**
  - acetone—water solns., fluctuations, study by Rayleigh light scatt. and hypersound dispersion 1=4341
  - alcohol solns., with alkali metals, light scatt. study 4=24174
  - alcohols, superheated, (hydrogen bonded) 4=18213
  - alkali metal oxides, 1050° to 1500°C 4=24163
  - benzene, near critical point 3=21323
  - benzene—propyl alcohol, near critical point of liquid-vapour system 4=24184
  - binary systems, rel. to diffusion 2=19545
  - binary systems with eutectic state diagrams 4=11177
  - cyclohexane binary mixtures, rel. to soln. mol. theory 4=18191
  - diagram expressions in power series expansion in density 4=24130
  - electrolytes in mixed solvents 4=2659
  - ethyl ether, near critical state, γ-absorption study 1=13027
  - films, rel. to thickness 2=7189
  - flowing, instrument for continuous meas. 3=7183
  - fluctuations, in heat flux, with acoustic and diffusion modes 1=2903
  - heavy water, 50° to 300°C, up to 100 kg cm^{-2} 2=4998
  - hexane, temp. depend., near crit. pt. 1=13021
  - metals, Ag, Cu, Pd, Pt 2=2701
  - metals, high temp. measurement 4=24182
  - methanol—water solns., fluctuations, study by Rayleigh light scatt. and hypersound dispersion 1=4341
  - methyl mercaptan (CH_3SH), above atm. press., temp. var. 1=15837
  - microfluctuations 4=24183
  - molten oxides, Na_2O. GeO_2. SiO_2 system 4=24164
  - molten salts, $AgNO_3$-$Ba(NO_3)_2$-$Ca(NO_3)_2$-$Mg(NO_3)_2$ 0=64
  - naphthalene, binary systems, rel. to eutectic 4=11177
  - nitrate melts, volume changes on mixing 1=16175
  - octane-hexane soln., temp. depend., near critical point 2=7478
  - organic coolants for reactors, high temp. and press. meas. 4=4
  - oxygen, boiling, bulk density 4=11432
  - oxygen, on saturation curve 1=4327
  - paraffins, near meniscus vanishing point 3=21323
  - para-hydrogen, saturated, 17°-32°K 2=7191
  - polycarboxylic acid 1=15865
  - polysiloxanes 2=11350-1
  - and short-range coordination 2=21893
  - silica, molten, temp. depend. 0=18383
  - siloxanes, methyl and ethyl, composition depend. 2=21906
  - slurries, conc. determ. by density meas. 2=4566
  - sulphuryl fluoride 0=5016
  - tensor behaviour in elec. field 4=14219
  - Al, stationary drop meas. 2=19532
  - Ar, as function of pressure and temp. 1=8107
  - As 3=23838
  - B, molten 4=132
  - Ba, boiling, crit., temp. var., calc. discrepancy 4=18183
  - Bi, 400°-800°C 2=5004
  - Bi, rel. to temp. near m. pt. 3=3793
  - Bi—S solns. 4=24185
  - CCl_4—methylene chloride solutions 0=10655
  - CH_4 solutions with A and N_2 1=12873
  - Ca, boiling, crit., temp. var., calc. discrepancy 4=18183
  - Cd amalgams, temp. depend. 1=12872
  - Co 4=18184
  - Cu, dilute soln. in liq. Bi, 790°-810°C 2=5004
  - Cu, 1356° to 2500°K 2=19544
  - Cu, stationary drop meas. 2=19532
  - Cu—Pb liquid alloys, specific volume determination 1=18345
  - D_2O^{18} 3=14144
  - D_2O, at high temp. and press. 4=2657
  - F_2, calc. using significant structure theory 4=8166
  - Fe 4=18184
  - Fr, calculation from liquid alkali metals data 4=14182
  - GaI—Ga_2I_4—Ga_2I_6 molten system 3=18827
  - Ge, rel. to temp. near m. pt. 3=3793
  - H, pressure depend. 2=4982
  - H_2, para, saturated, temp. var. 3=14424
  - H_2—D_2, m.p. to 20.4°K 3=21343
  - H_2—D_2 mixtures, from m.pt. to 20·4°K 1=18438
  - H_2O^{18} 3=14144

ity—contd
- **uids**—contd
  - H_2O, max., temp. calc. from compressibility 4=8178
  - H_2S, with saturated vapour, rel. to temp. 3=14147
  - H_2SO_4 solutions 1=5278
  - He^3, molar volume meas. 3=5563
  - He^3, between 0·045° and 1·3°K 1=18690
  - He^3, 0.14-1°K, 0.2-30 atm 1=4524

- sphere, surface initiation 1=11622
- spinning detonation and detonation stability 1=18457
- stability of idealized one-reaction detonations 4=18349
- stabilization against hypersonic waves 2=9305
- stationary zones in toroidal tubes 0=6398
- TNT liquid, pressure 0=6399
- TNT, pressed, detonation vel., charge diam. depend. 1=4099
- transmission in water, luminosity 3=21379
- in tube with space between charge and tube wall 1=9414
- two-reaction A ⇌ B, A ⇌ C medium, idealized, extension to one-dim. piston problem 4=30899
- two-reaction type, in 3-component gas mixture 1=7909
- underwater, elastic waves generation 2=15673
- V.V., Mach reflection of detonation waves 1=15942
- velocity, normal and supernormal 1=9415
- water, pressure meas. rel. to eqn. of state 3=1751
- wave pressure, by rod compression method 0=10351
- wave reflection effects on development, streak photo. study 1=11623
- wave structure near hot boundary 3=18896
- waves in gases, in Russia, review 4=21229
- waves, Mach reflection 1=10538
- waves, magnetohydrodynamic, structures 3=4254
- waves, oscillations 1=18456
- waves, plane, structure 0=16772
- waves, scabbing of steel 2=14905
- Ar, fronts at high temps. 2=2753
- H_2-air, in supersonic flow, wave props. 0=2270
- H-O mixtures, marginal detonation, effects of additives 2=19147
- H-O mixtures, vibration phenomena 0=6862
- H_2—O_2, density in induction zone 4=2776
- H_2—O_2, wave reflection effects 1=11623
- $2H_2 + O_2 + 2CO$, in shock tube, turbulent structure 1=7908
- $O_2 - C_2H_2$, $O_2 - C_2N_2$, in shock tube, C_2, CN radical temps. 4=7757
- Pb azide, initiation by high-intensity light 4=30898

Deuterium
- adsorptn. on carbon black 3=1377
- absorption by cathodes, in elec. discharges, mass spectrometer meas. 2=1413
- adsorption on glass, 20° and 17°K 4=13688
- absorption by Pt—Pd alloys 4=26720
- absorption in Zr films for nuclear targets 4=16717
- atmospheric content. 3=25892-3
- in atmospheric H_2 0=2040
- atom and ion beams, 20 MeV, collisional electron detachment from 4=18676
- atom trapping by mag. field, plasma prod. 2=15912
- atomic spectrum, ground state, precise h.f.s. det. 0=7725
- atoms in H_2, CH_4, and C_2H_6, reaction and moderation probabilities 4=23673
- atoms, h.f.s., α^3 corrections, calc. 1=3505
- atoms, h.f.s., precise det. by e.s.r. 0=20543
- atoms, hyperfine anomaly, theory 1=801

Deuterium—contd
atoms, Lamb shift 1=7425-6
atom, Lamb shift of ground state 3=7328
atom, μ-mesic, nuclear polarization 1=13628
atoms, n = 3 level, fine structure by microwave-optical method 0=17708-9
atoms, in ^2P state, chem. reaction with N_2 4=13724
atoms, prod. in h.f. discharge 3=4032
bubble chamber, 9 inch 2=5542
$-CH_4$ mixtures, n irrad., failure of T elastic collision model 3=18460
chemical analysis, by γ, n, use of β-source bremsstrahlung 4=26772
collision-induced rotational transitions D_2 and HD 0=9781
compressibility isotherms 0=6838
compressibility, quantum hard-sphere model 3=21434
conductivity thermal, liquid, ortho and para 4=171
crystal structure, electron diffr. meas. 4=23439
crystal structure and heat capacity 4=29110
crystal structure by neutron diffraction 3=1319
dμ mesic atom, transitions 1=17301
density of mixtures with H_2, from m.pt. to 20.4°K 1=18438
desorption from Pd 0=10373
detection as H_2D^+ in omegatron 2=22177
deuterium—hydrogen exchange in fused silica, i.r. study 1=1475
diamagnetism, calc., including vibrs. 4=9705
diffusion in Al, by $d + d \rightarrow He^3 + n$ 3=17352
diffusion in deuteron-irradiated Cu 0=13559
diffusion of He^4 with DT, thermal 3=21430
diffusion in liquid hydrogen 1=10510
diffusion in Nilo-K glass to metal seal material 4=6876
diffusion and permeability for fused quartz 2=6366
diffusion in polymers, and H, T 4=6877
discharge electric, l.p., as neutron source pulsed, very rapid, fast 3=19659
discharge plasma, radiation energy loss 0=15025
dissociation energy, u.v. absorption edge 1=6052
dissociation rate 2=14333
effect of deuteration on hydrocarbon flame bands 0=5937
elec. breakdown below critical pressure 0=9020
elec. discharge, constricted, infl. of thermoelec. effects on max. temp. 1=18781
elec. discharge, h.f., in const. mag. field 0=19649
elec. discharge, heavy-current l.f., plasma conductivity 1=7038
elec. discharges, high-voltage, starting potential theory 2=9549
elec. discharge, l.p., use in pulsed neutron generator 1=13454
elec. discharge, neutron prod., X-ray emission 1=7037
elec. discharge, pinched, electron density meas. 2=5350
elec. discharge, pressure meas., with piezoelec. gauge 1=7043
elec. discharge, pulsed, neutron axial distrib. 1=7246
elec. discharge, r.f., ion cyclotron waves 3=7622
elec. discharge, ring config., mag. field effects 1=7035
electric discharge, in Sceptre, periodic mag. field fluctuations 0=19636
electric discharge, stationary striations, spectral analysis 4=5568
elec. discharge, 3-30 Mc/s, in static mag. field 0=12594
electric sparks in, channel expansion 1=18790
electrolytic separation, rel. to cathode material and temp. 4=2159
electrolytic separation factor, H–D 0=748
electrolytic separation from H 2=23964
electron collision cross-sections in d. c. field 3=23942
electron diffusion—mobility coeffs. ratio 3=4023
electron drift and diffusion in, with crossed elec. and mag. fields 2=17779
electron ionization frequency 4=18675
enrichment in distillation of ammonia 3=8940
equation of state, and D_2–He mixtures, $<H_2$ b.p. 0=16734
exchange, H determination, i.r. spectrophotometric method 0=18453
free radicals, in solid films, prod. by p and d bombardment, 100-1000 V, e.p.r. 3=10550
galactic, 327 Mc/s line study 1=18008
gas discharge tube, higher intensity than H 3=24232
gas, mobility of ions 0=19620
gas, slow-electron drift vel., 77°-443°K 2=19900

Deuterium—contd
gas, solubility in K amide + liquid NH_3 2=2713
generation, by heavy-water electrolysis unit 0=16380
glow discharge at 40-80 kV and 1A 1=18804
glow discharge, high-voltage, cathode fall theory 2=3014
glow discharge, positive column instability 2=7582
hailstone content, for stone trajectories and altitude of form. 4=2927
in He of reactor coolant loop, mass spectrometric determ. 4=2174
high-current discharge in longit. mag. field 0=5312
high-current gas discharges 0=9041
homogeneous exchange reaction between H and D 0=16372
ion beams 0=17047
ion, D_2^+, dissociation energies meas. 4=9778
ion sputtering of Ti, 10 to 25 keV 3=449
ionization of D atoms in H_2 and D_2 gases 0=14966
ions, D_2^+, dissociation in molecular collisions, cross-section for d-formation 4=25752
ions, D_2^+, emulsion sensitivity, up to 25 keV 4=9037
ions, D_2^+, range in quartz, 7.5-52 keV 1=336
K^--meson capture, charge independence, theory 3=608
lamp, spectral intensity 2=11485
Lennard—Jones 6-12 potential parameters 1=11137
Li^8 ion range, 40 - 450 keV 1=7107
liquid, μ^- reactions, formation and decay of $(d\mu d)^+$ 4=3953
liquid, in soln. with H_2, density, m.p. to 20.4°K 3=21343
liquid state, thermodynamic props., reduced volume, quantum cell model 4=14134
liquid, target, for 1 GeV proton synchrotron at Birmingham 3=14692
liquid, use in bubble chamber 2=3225
melting, pressure—temperature equn. 3=12000
moderation of neutrons 1=13436
molecular beam, production, for nuclear fusion studies 0=20709
molecular vibrations, anharmonic atomic, and spectroscopic mass calc. 4=12446
molecule, elec. charge, upper limit 3=10091
molecule, mag. suscept. and rot. mag. moments, vibr. and centrifugal effects 4=28191
molecule, neutron scatt., quantum states transition 3=25074
moving magnetic field behind shock front 0=1196
mutual solubility at 4.2°K, H–D 0=12099
natural water content variation. 3=25898
Ne–nD_2 liquid systems, phase separation 3=3801
neutron-producing mechanism in transverse pinch 1=2976
neutron scattering, 14.1 MeV 4=16901
in nuclear track emulsions, introduction 1=4750
in organic liqs., nuclear quadrupole relax. 4=24248
ortho- and para-mixtures, preparation 0=1473
ortho and para modifications, equation of state, difference in 2nd virial coeff. 0=8706
permeation, diffusion and solution in Ni 1=6114
permeation, diffusion and solution in Ni 1=11227
permeation rate through Fe 3=22815
photochemistry, reactions of Hg6($^3P_1$) with hydrocarbons, isotope effect 3=8973
π^0-meson photoproduction at 170 to 210 MeV 3=4427
pinch effect, boundary-layer formation 0=10897
plasma confinement, neutron yield at 3 keV ion energy 1=5467
plasma, cylindrical, hydromag. wave propag. 3=19291
plasma, density meas., with T ion beam 4=2990
plasma, directed flow into vacuum magnetic cusp field 0=15033
plasma, electron density, interferometric meas. 3=7582
plasma fusion experiments 0=17645
plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
plasma, heating by fast magnetic compression 4=8694
plasma, high-temp. in Scylla, X-ray emission spectra 3=7581
plasma, from high vel. plasma guns 3=7520
plasma, highly-ionized, steady-state, development and study 3=7498
plasma, hot, production and containment 3=12150
plasma, injection into cusp mag. field 1=7081
plasma, ion cyclotron waves 0=15046
plasma, ion and electron currents 0=15010

Deuterium—contd
plasma, ionization and heating, rel. to impurities 4=8686
plasma, Joule heating in strong magnetic field 4=8685
plasma machine, DCX, proton energy distrib. 2=15929
plasma, magnetic compression 1=5468
plasma, mag. field meas. during fast compression 2=11655
plasma, n energy spectrum, cyclotron heated, mag. mirror 3=19913
plasma, near-pure, from toroidal apparatus "Tokamak 2" 1=1900
plasma, neutron emission in pinches 1=9589
plasma, ohmic heating and charged particle loss 0=11475
plasma oscillations, frequency det. 3=2004
plasma pinch formation, dynamic stability 1=2975
plasma pinch, theta-type, evidence for confinement 1=5466
plasma in strong shock wave, electron temp. 2=198
plasma, thermalization of fast injected ions 1=11927
plasma, thermonuclear reaction yield 1=7410
plasma θ pinches, ionization rates and impurity radiation losses 4=18958
plasma, Θ-pinches, ionization rates and power loss by impurities 4=16494
plasma, threshold ion energy 2=9601
plasma, transport coefficients, in magnetic field 1=11930
plasma, transport props. 3=16926
plasma, trapping, prolonged confinement 2=19971
plasma, two-temp., transfer coeffs., calc. 4=14631
plasma, in ZETA, containment 2=5349
plasmoids, fast moving 4=11604
polycrystalline, structure 0=21187
positron annihil. mean life in liq. and solid 4=4031
rain water content. 3=25897
Raman spectra, high-resolution, solid and liquid 2=2721
Raman spectrum, laser stimulated, four photon, difference from H_2 4=9704
relative abundance in solar system 1=6696
relaxation of nuclei in paramagnetic solutions 0=2179
scattering of D^+ and D_2^+ in D gas 0=4168
second virial coeff., HD and D_2, 20-70°K 2=1195
separating plant, H_2O-H_2S, calculations 0=2721
separation, H–D by adsorption 0=3329
separation, industrial, by low-temp. distillation 1=4916
shock wave, e.m. driven, R-type ionization front 3=7277
shock waves 1=4372
shock waves, in magnetically-insulated tube 1=6890
shock waves, precursor effect, microwave study 4=18347
shock waves, spherically symmetrical compression 1=15937
solid, anomalous sp. ht. for low p-D conc. 2=6276
solid electron diffraction patterns 4=13589
solid, e.s.r. of unpaired atoms rel. to lattice sites 4=4402
solid, n.m.r., with 33 and 55% para 0=6279
solid, neutron diffrac. study, at 12° K 1=20528
solid, nuclear magnetic relaxation 0=8091
solid (ortho), lattice specific heat, 2-18°K 0=20749
solid, para-enriched, λ-anomaly in specific heat 3=2732
solid, para-ortho conversion rate 2=23041
solubility in liquid argon 0=19118
in solution with H, solid–liquid phase diagrams 3=21612
spectrum of Rb, doublet displacement, pressure var. 4=6483
superfluidity, in mag. field, critical temp. and press. 0=19531
in Ta, (build-up), d-irrad., neutron yield 0=17979
target for electron accelerator 3=14688
target, heating by proton beams 2=3338
thermal diffusion in CO_2 1=174
thermal diffusion, with trace of HT 3=11818
thermodynamic props. calc. 3=23929
thermodynamic props. rel. to HT, rotational effect, perturbation calc. 0=20606
thermodynamic props, -175 to 150°C 0=14909
thermodynamic props., -175°C to 150°C, up to 2500 atm. 3=23930
toroidal discharge, meas. of proton energies produced 0=20143
ultrahigh vacua, Mo adsorption technique 1=15974
ultrasonic absorption, rotational relaxation, 77°, 90° and 293°K 4=16149

Deuterium—contd
virial coeffs. between -175°C and +150°C 1=6897
viscosity, -50° to 150°C, below 200 atm. 4=24264
viscosity meas. 0=16723
viscosity 20-80°K 0=8705
water content determ. from i.r. spectrum 2=12302
D^- ion source, 2mA beam 3=14667
D^-, 20 MeV, electron detachment by mag. field 3=24213
D^+, bombardment of Cu, sputtering ratios 0=9110
D^+ formation in $D_2^+-D_2$ collisions 3=15391
D^+ irradiation of metals, disintegration 2=11727
D^+, mobility in parent gas 0=8994
D^+ nonfilament source for cyclotron 2=20040
D_2 absorption on graphite 2=4497
D_2 arc discharge, visible and i. r. meas. 4=18781
D_2 beams, scattering by Ni, polycrystalline 4=19996
D_2, $C^1\Pi_u(2p)$ state Λ doubling, isotopic effect 3=2614
D_2 condensed layers, texture, rel. to H_2 4=13682
D_2 diffusion in CCl_4 4=18189
D_2 gas discharge, radially constricted, stability criterion 1=18782
D_2-H_2, D_2-CO_2, diffusion, Kirkendall effect 1=176
D_2 and H_2, intermolecular potentials, difference 4=9792
D_2, and H_2 + Xe powerful impulsive discharges, electron energy meas. 3=7452
D_2 and HD, mol. vibrational levels 2=8081
D_2, heat capacities, 1. 5°-22°K, and heats of fusion of liq. rel. to ortho–para comp. 4=20212
D_2, heterogeneous perturbations between $B^1\Sigma_u^+(2p)$ and $C^1\Pi_u(2p)$ states 3=2613
D_2 intermolecular potentials 1=14123
D_2-Kr, D_2-A mixtures, dissociation rates 2=12345
D_2 liq., surface tension rel. to temp., expt. 4=27164
D_2, normal and ortho-, molar volume difference 1=8110
D_2(ortho) and HT mixtures, separation by adsorption 1=12267
D_2, photoionization and absorpt. cross-sections, 580-1000A 4=28190
D_2, slow neutron scatt. calc. 4=25645
D_2 scattering of H atoms 4=25780
D_2 screening consts., calc., including vibrations 4=9705
D_2, thermodynamic and partition functions 4=28177
D_2 vapour, Townsend coeffs. and Paschen's law breakdown 3=4010
D_2^+, dissociation and charge exchange in H_2 atmos. 1=4564
D_2^+, number of bound states, calc. 0=13434
in H, mass spectrometer leak detector 0=12439
H_2-D_2 liquid mixtures, props. at 20°K 0=14638
H, D and HD mixtures, chromatographic separation 1=13977
H_2–HD, H_2-D_2, HD–D_2, viscosity 0=6820

  - optical model analysis 2=5952
  - on protons, at 28 MeV 2=3603
  - p + d collisions at high energy, π—π P-wave scatt. length 1=16857
  - p + d collisions at high energy, π—π S-wave interaction, existence of ω^{0} refuted 1=8489
  - $p + d \rightarrow H^{3} + \pi^{+} + \pi^{0}$, H^{3} spectrum 2=287
  - $p + d \rightarrow H^{3} + \pi^{+} + \pi^{0}$, H^{3} spectrum 3=4390
  - p—d, 745 MeV, He^{3} and H^{3} production with pions 4=6097
  - $p + d \rightarrow He^{3} + \gamma$, catalysis by muons, γ-rays study 4=6675
  - D(p,γ)He^{3}, below 50 keV 3=15045
  - $d + p \rightarrow He^{3} + X$ rel. to π—π, I = 0 resonance 3=4430
  - $p + d \rightarrow He^{3} + \pi^{\circ}$ and $H^{3} + \pi^{+}$, meas. and anal. 4=6098
  - $p + D \rightarrow He^{3} + \pi^{0}$ at 600 MeV 1=5722
  - $d + p \rightarrow He^{3} + \pi + \pi$ 3=17318
  - $p + d \rightarrow He^{3} + 2\pi$, logarithmic singularities 4=21898
  - $d+p \rightarrow \left\{\begin{array}{l} He^{3}+\pi+\pi \\ He^{3}+\pi+\pi \end{array}\right.$ at 700 MeV, final state enhancement factors 2=11940
  - $p + d \rightarrow He^{3} + 2\pi$, rel. to strong π—π interaction 4=6100
  - p—d, high-energy, meson production anomaly 1=497
  - $\bar{p} + d \rightarrow \Lambda + \Sigma^{-} + \overline{\Xi}^{+}$ meas. 4=21854
  - d + p, neutron spectra 1=4798
  - d–p at 135 MeV 1=19192
  - $p + D \rightarrow 2p + n$, 5-10 MeV, proton spectra 3=19711
  - d(p, 2p)n, 50 MeV 4=21957
  - $p + d \rightarrow p + p + n$ at 145 MeV 1=13525
  - $\bar{p}$—d, production of strangeness —3 baryon, theory 4=9286
  - p—d, 77 MeV, cross-sections, total and elastic 3=12516
  - $p + d \rightarrow t + \pi^{+}$, at 670 MeV proton energy 1=13410
  - π-mesons, elastic, dispersion relation 2=16172
  - π-mesons, impulse approx. theory 2=5725
  - d—π^{+}, rel. to 3π, I = 0 resonance 3=4430
  - $\pi^{\pm} + d \rightarrow K + (\Lambda \text{ or } \Sigma) + N$, and Λ, Σ^{0} isospin purity 4=9289
  - $\pi^{-} + d \rightarrow n + n + \gamma$, γ spectrum and n—n scatt. 4=25104
  - $\pi^{-} + d \rightarrow 2n + \gamma$, proposed det. of n—n scatt. length 1=4800
  - $\pi^{+} + d \rightarrow p + p + f_{0}$ missing peaks and $f_{0} \rightarrow 2\pi^{\circ}$ or $\pi^{+} + \pi^{-}$ ratio 4=25154
  - $\pi + d \rightarrow p + p$, impulse approx. 4=19559
  - $\pi^{+} + d \rightarrow p + p$, 0.65 to 1.95 GeV/c, differential cross-section, meas., 4=30258
  - $\pi^{+} + d \rightarrow p + p$, pionic s and p wave contrib. 2=11979
  - $\pi^{\pm}$ photoprod. ratio from deuterium 4=930
  - photo- and electrodisintegration, double dispersion relations 1=8517
  - photoproduction of pions 1=5751
  - photoproduction of π^{0}, dispersion relations 1=16845
  - photoproduction of π^{0} at 170-210 MeV 2=3382
  - photoprod. of π^{+} at 340 MeV, yield rel. to prod. on H 1=8484
  - photoproduction of $\pi^{\pm}$, π^{-}/π^{+} ratio from threshold to 194 MeV 1=527
  - quasi-deuterons in C, photoproton prod. at 245 MeV 1=8700
  - $d + \Sigma^{-} \rightarrow \Lambda + 2n$, Λ momentum distrib. 3=24803
  - $\Sigma^{-} + d \rightarrow 2n + \Sigma^{0}$ or Λ, low-energy calc. 3=10176
  - $\Sigma^{-} + d \rightarrow 2n + \Sigma^{0}$ or Λ, transition rates 3=10177
  - splitting, under nuclear forces 2=22847
  - stripping reactions, spin–orbit distortion 2=22657

Deuterons—contd
interactions—contd
D—T breakup reaction, virtual state of He^4 3=2331
d + t→ He^3 + n + n, energy spectra calc. 2=18309
D (t, n) He^4, evidence for α excited state 2=22661
T(d, n)He^4, neutron polarization 3=676
T(d, n)He^4, neutron polarization, 4=30279
T(d, n)He^4, 1 to 3 MeV, 4=30278
T(d,n)He^4, 3-19 MeV 4=19605
D —T, at 9 MeV, neutron spectra 3=2327
H^3(d, n)He^4, in Ti tritide foils, efficiency, H^3 concn. depth variation 1=5792
H^3(d, p), search for H^4 4=15110
He^3 + d(6-10 MeV), p spectrum, and He^4 excited state 4=15112
He^3(d, t)He^2, half life meas. 4=9320
D —He^4, at 9 MeV, neutron spectra 3=2327
He^4(d, np) He^4, p spectra 4=21959
He^4(d, p)He^5 stripping, 24.3 and 27.3 MeV 4=9310
C^{12}(d, d)C^{12}(d, p)C^{13}, d-wave contrib. 2=22837
O^{16}(d,d)O^{16}, spectrum 1=3086
V^{51}(d,d)V^{51}, ang. distrib.,8-10.5 MeV 3=15220
photodisintegration
(subheading introduced in 1961).
calc., multipole expansion, 50-120 MeV 3=12515
covariant description 4=9306
covariant theory 4=25203
photodisintegration, cross-section, calc., using P-wave phase shifts 1=2103
photodisintegration, cross-section and polarization, calc. 1=553
cross-section and polarization, up to 130 MeV 2=13893
cross-sections and polarizations, to 130 MeV 4=19603
deuteron photodisintegration 3=612
photodisintegration, dispersion relations 3=612
dispersion relations, application 2=20435
e.m. transitions, 162-833 MeV, theory 3=7937
effects of parity nonconserving nucleon potential 1=19288
photodisintegration, at 80-300 MeV, diff. and total cross-sections, calc. 1=3247
energy between 50 and 150 MeV 2=3416
photodisintegration, extrapolation for $\gamma + n \rightarrow \pi^- + p$ total cross-section near threshold 1=531
between 50 and 150 MeV 3=4471
photodisintegration at 500-900 MeV → p + n, ang. distrib. and cross-sections 1=2102
$\gamma-3\pi$ interaction study 3=15016
photodisintegration at high energy, electric multipole transitions 1=3245
photodisintegration at high energy, exchange current effects 1=9778
Landau curves, acnodes 2=13892
low-energy limit 2=20436
photodisintegration, matrix element for fixed energy, analytic props. 1=12129
medium-energy, elec. and mag. dipole transitions 2=13891
and mesonic effects, search 3=12513
neutron polarization meas. 3=15044
parity nonconservation effect below pion prod threshold 4=16976
π^- production 3=4424
polarized and aligned deuterons, cross-sections 2=1730
photodisintegration, potential model and Mandelstam representation 1=5676
photodisintegration and proton polarization 1=13419
proton polarization due to 294 MeV photons 3=22217
revised calc. 2=324
theory below pion production threshold 4=16975
near threshold, final-state interaction 3=19710
photodisintegration at 20-80 MeV, polarizations and ang. distrib., calc. 1=10935
2.75 MeV, neutron polarization 2=323
photodisintegration, validity of extrapolation procedures 1=12130
velocity-dependent and static potentials, analysis 1=13526
polarization
(subheading introduced in 1961).
beam, polarized, prodn. method 2=22521
determination, theoretical, after a nuclear reaction 1=13528
in (d, n) reactions, rel. to differential cross-section and n polarization 4=9551

Deuterons—contd
polarization—contd
e—d scatt., calc. 4=21962
elastic scatt. by nuclei, model 2=8003
elastically scattered on nuclei 4=30347
electric, calc. for several wavefunctions 3=4472
electric, during Coulomb scattering 2=5953
electric, by point charge, for ground state 4=959
measurement, using (d, T) reaction 1=7288
after π^0 photoproduction 4=21963
polarization, from Saclay cyclotron 4=19602
production 2=5750
production by atomic beam magnetic resonance method 1=13524
production and detection 1=13527
and quadrupolarization, in elastic scattering on nuclei 2=8004
resonant depolarization in cyclotron 4=24772
from Saclay cyclotron 4=19602
in Saclay cyclotron beam 2=20073
scattering, elastic, on He^4, at 1.07 MeV 1=3248
in scatt., elastic, on spin-zero nuclei, diffraction theory 1=19503
in scattering by He^4 4=19606
scatt. on He^4, elastic, 1-3 MeV, calc. 1=19290
source of polarized deuterons 1=16786
source of polarized deuterons 4=11988
tensor polarization parameters in d—p scatt. 4=3495
Be^9(p,d)Be^8 1=13527
Be^9(p, d) Be^8, at 3 MeV 2=1890
C nuclei, scattering, at 422 MeV 2=1909
Fe, elastic scatt. at 6.5 MeV 3=22416
Ni, elastic scatt. at 6.5 MeV 3=22416
Ta scatt. at 13.6 MeV, meas. 4=6369
Ti, elastic scatt. at 6.5 MeV 3=22416
scattering
See also Protons and antiprotons, scattering, proton-deuteron.
A var., 11.8 MeV 3=22415
d—α, elastic, 3.5—10 MeV 4=15108
alpha-particles, polarized deuteron production 1=13527
ang. distrib., and optical model 4=3686
angular distributions, 2.6 and 25.3 MeV, elastic scatt. 4=19811
collisions with μ-mesic H atoms 0=11492
Coulomb, elastic, multipole polarization 2=5953
cyclotron, Argonne 60 in scatt. chamber 2=20074
d—d, d—t, d—He^3, 5—14 MeV, elastic, diff. cross-sections 0=7423
D —D, elastic, high-energy, impulse approx. 3=2328
d—d, elastic, 25.3 MeV 4=9309
D-D, impulse approx., M-matrix 2=18193
on deuterons, low energy, with mutual distortion 1=8519
d—d, 20-70 MeV, total cross-section 3=12517
on D and T, at 30-600 keV 0=2600
diffraction scattering by black-disk nucleus 0=2663
diffraction scattering, on ellipsoidal black nuclei 1=13835
direct inelastic, general differential cross-section 1=713
e.m. form factor, relativistic calc. 4=16973
elastic, in A = 40 region, 9.8-12.8 MeV 2=22838
elastic, on black nuclei 2=8006
elastic, distorted wave theory, ang. distrib. and polarization 1=2229
elastic, by 11 nuclei, at 13.5 and 15 MeV, ang. distrib. 0=15575
elastic, at 11.8 MeV, ang. distrib. on 18 nuclei 2=478, 10132
elastic, 11 - 12 MeV, Ar to Sn, optical model analysis 4=12254
elastic, 15 MeV, by 23 elements 3=15221
elastic, HD beam contamination, B^{11}(t, p$_0$)B^{13} study 0=20462
elastic, by He^4, analysis, rel. to d—He^4 interaction model 0=13072
elastic, by heavy nuclei, analysis of data at 11 and 15.2 MeV 0=13236
elastic and inelastic in cyclotron of Ukrainian Acad. of Sciences 3=19880
elastic and inelastic, 11.2 MeV, differential cross-section 1=8763
elastic and inelastic, 28 MeV 2=3603

    GaP, dielec. const., from i.r. lattice absorption 0=10042-3
    GaP, real and imag., from optical data 3=8584
    GaSb, constant by reflectivity meas. 1=19878
    Ge, condenser photoeffect, effect of organic dyes 2=8437
    Ge, dielec. const. at microwave frequencies 0=7976
    Ge, dielectric const. at microwave frequencies 1=1122
    Ge, electric susceptibility 4=12895
    Ge, energy losses, microwave techniques 2=2199
    Ge, microscopic suscept., shell model 4=20366
    Ge, n-type, const. rel. to elec. fld. intensity 2=23314
    Ge, n-type, permittivity, hot electron effects, 9.392 Gc/s 4=22712
    Ge, 100-400 kc/s, −180 to +40°C 0=627
    Ge, permittivity near band edge 2=14602
    Ge, real and imag., from optical data 3=8584
    Ge oxide films 4=28613
    He^4, microwave frequencies 4=18523
    HgO, red and yellow, with temp. and freq. 2=4086
    I crystals, 180° -330° K, meas. along crystal axes 4=7032
    InAs, real and imag., from optical data 3=8584
    InP, InAs, InSb and bandgap and occupancy 4=28557
    In_2S_3 meas. 4=20374
    InSb, real and imag., from optical data 3=8584
    K, constant, 0.6 to 2.5 μ wavelength range 4=12666
    KCl, Ca-doped, dipole aggregation process 4=1652
    KBr, coloured crystals, dielec. relaxation 2=23491
    KBr, coloured crystal, diel. relaxation 3=6613
    KBr crystals doped with S, loss meas. 2=14432
    KBr crystals, prebreakdown currents 0=20962
    KBr, effect of neutron irrad. on loss tangent 1=12468
    KBr, 8 mm, by shorted-line waveguide 3=22973
    KBr, rel. to fast electron-irrad. 4=1651
    KBr, lattice dynamics, Green's function calc. 4=9824
    KBr, 0.3 and 3.0 mm wavelengths 0=628
    KBr, r.f. dispersion at high temps. 4=26106
    KCl, coloured and colourless, elec. cond. 0=15880
    KCl crystals, wave-number dependent dielectric function 4=15556
    KCl dust, electrification by β-irrad., effect of F-centre concn. 2=8255
    KCl 8 mm, by shorted-line waveguide 3=22973
    KCl, elec. cond., Sr doped, temp. var., and association 4=20407
    KCl films, secondary emission 0=3794
    KCl, high-temp. loss, rel. to Sr content 4=28619
    KCl, high-temp., rel. to vacancy pairs 4=7033
    KCl, 0.3 and 3.0 mm wavelengths 0=628
    KCl, with Sr impurity, dielec. losses 1=1128
    KCl, rel. to vacancies and impurities 1=12373
    KCl: Ba, losses, -55 to + 60°C, 300-1500 c/s 1=2430
    $KCl.CaCl_2$, dielec. losses, effect of ht. treatment and plastic deform. 4=26103
    $KClO_3$, Cl^{35} quadrupole resonance, linear effect of applied elec. field 1=14837

Dielectric properties of substances—contd
solids—contd
KD_2PO_4, Curie point and dielec. const. 3=17943
KD_2PO_4, paraelec. response meas. 3=10871
KH_2PO_4, complex at 9·2 Gc/s 3=8553
KH_2PO_4, second harmonic generation of light 3=1839
K halides, from optical refl. data 3=25433
$KLiSO_4$, dielec. const. near transition point 2=16770
$KNbO_3$ 3=16033
$K_2O.2Ta_2O_5$ 4=23465
$KTaO_3$, near Curie point 3=17936
$KTaO_3$, paraelec., microwave, Curie—Weiss law 4=26121
La ethyl sulphate, 9kMc/s, 4.2-290°K 2=19057
LiF with adsorbed water 3=10880
LiF, defects giving dielec. props., recovery kinetics 4=1650
LiF, dielec. consts., static and h.f., theory 0=10011
LiF, diel. constant, var. with pressure 2=14603
LiF, effect of X-ray irrad. and heating 3=8479
LiF 8 mm, by shorted-line waveguide 3=22973
LiF in i.r. 0=6182
LiF, loss dispersion, effect of annealing 1=17821
LiF, losses due to neutron irrad., dielec. dispersion 2=659, 23492
LiF, real and imaginary, rel. to electron states 2=4123
LiF, relaxation meas., rel. to lattice defects 3=22702
$Li_2SO_4.H_2O$, protonic conductor, two dispersions 4=10097
$Li_2SO_4.H_2O$, rel. to proton mobilities 4=28480
lithium selenite, dielectric constant charge during switching 1=11338
$Mg_3B_7O_{13}Cl$, phase transformation, and absence of ferroelec. 4=4201
MgO, diel. constant, var. with pressure 2=14603
MgO_2, temp. voltage and freq. depend. 0=18092
$Mg(OH)_2$, effect of adsorption of water 0=14945
$MgSO_4.7H_2O$, crystals, temp. depend. 0=11749
$MgTiO_3$ losses, under irradiation 1=19926
$MgTiO_3$, losses, under irradiation 2=4096
$MgTiO_3$, microwave props. 3=13112
Mn ferrites, props. at 10 kMc/s 1=14737
$MnLuO_3$ and similar manganites 3=13119
MnO_2, temp., voltage and freq. depend. 0=18092
MnS, dielectric absorption 1=14535
MnS, dipolar relax., α green, due to adsorbed S 4=20406
MnS, dipolar relaxation 2=4087
$MnSO_4$ soln. rel. to u.s. relaxation 1=18404
MoS_2, dielec. const. 3=8376
NH_4Br, antiferroelectricity 2=6526
$(NH_4)_2H_3IO_6$, permittivity, +20° to −70°C 0=18084
ADP, dielec. const., 20-80°C, for various cuts 0=11742
$NH_4H_2PO_4$, props. at Gc/s freqs. 1=17823
$NH_4H_2PO_4$, rel. to temp. 2=18766
NH_4I, antiferroelectricity 2=6526
NH_4NO_3, dielectric anomaly in low frequency region 4=4199
NaBr, coloured and colourless, elec. cond. 0=15880
$NaBrO_3$, Br^{81} quadrupole resonance shift by elec. field 1=14836
NaCl, with Ca impurity, dielectric losses 1=1128
NaCl, coloured and colourless, elec. cond. 0=15880
NaCl, dielec. losses, effect of CO_3^{2-} and OH^- groups 3=20375
NaCl, effect of neutron irrad. on loss tangent 1=12468
NaCl, effect of X-ray irrad. and heating 3=8479
NaCl, 8 mm, by shorted-line waveguide 3=22973
NaCl, ionic conductivity and time-dependent polarization 3=10872
NaCl, loss, effect of OH^- content 2=12558
NaCl, losses, effect of hydrolysis, meas. 4=20409
NaCl, 0.3 and 3.0 mm wavelengths 0=628
NaCl, photoconducting, polarization and elec.-field distrib. 3=10869
NaCl, r.f. dispersion at high temps. 4=26106
NaCl, relaxation due to impurity—vacancy complexes 1=6189
NaCl, relaxation due to impurity-vacancy complexes 4=28983
NaCl-type crystals 1=19691
NaCl-type crystals 2=8152
NaCl, X-irrad., electrification 0=3714
NaCl:Ca 4=12961
NaCl:Ca, X-ray irrad., disappearance of loss peaks 2=660

Dielectric properties of substances—contd
solids—contd
$NaClO_3$, Cl^{35} quadrupole resonance, linear effect of applied elec. field 1=14837
NaI, lattice dynamics, Green's function calc. 4=9824
$NaNO_2$, near Curie point, temp. dependence 4=28630
$NaNO_2$ single crystals 3=23002
$NaNbO_3$-$KSbO_3$, effect of substitution of Na by K 4=7035
$NaNbO_3$-$NaSbO_3$, effect of substitution of Nb by Sb 4=7035
$Na(Nb_{1-x}Ta_x)O_3$, transitions 3=13394
Nb_2O_5 films, on Nb, dielec. const. 0=14085
Ni ferrite, resistivity, change on mag., anisotropy 3=17927
NiFe garnet, fine grain, loss, microwave meas. 4=13299
Ni-Zn ferrite, dielectric relaxation 0=18096
Ni—Zn ferrites 3=4939-40
Ni—Zn ferrites, rel. to magnetic properties 3=8684
Ni—Zn ferrites, props. at 10 kMc/s 1=14737
O^{18}, in ice, relaxation, and defect, new type 3=6512
$PbBi_2Nb_2O_9$, structure unfavourable to ferroelectricity 2=17026
PbC_2O_4, permittivity and losses, low frequency 15°C 4=1654
$PbCl_2$, TlCl- or $BiCl_3$-doped, electrolytic cond. 3=17926
$PbHfO_3$, complex dielectric const., study 4=1666
$PbMg_{\frac{1}{2}}W_{\frac{1}{2}}O_3$, antiferroelectric Curie point, anomalies in elastic yield, internal friction 4=1953
Pb $(NO_3)_2$, meas. by graphical anal. method, microwave region 4=7026
$Pb_3NiNb_2O_9$ 0=7974
$Pb_3NiNb_2O_9$, freq. and temp. depend. 0=18091
$Pb_3NiNb_2O_9$–$Pb_3MgNb_2O_9$ polarization mechanicsm 0=629
PbO-TiO_2-ZrO_2 system 3=3255
PbS layers, permittivity, 10 Gc/s 0=18050
PbS, from optical i.r. transmission and reflection 4=22874
PbSe, dielectric const., imaginary part, analysis 4=14013
Pb silicate glasses, radiation effects on logs 4=17515
PbTe, low freq. dielec. const. 3=13106
PbTe, 24 Gds, < 200, from cavity surface impedance 4=17516
$PbTiO_3$, paraelec., microwave, Curie—Weiss law 4=26121
$PbTiO_3$ in $BaTiO_3$, measurements 1=17843
$PbTiO_3$—$BaZrO_3$ system 3=13481
$PbTiO_3$—$LaAlO_3$, rel. to phase diagram 3=20767
$PbTiO_3$—$LaFeO_3$ system, temp. and $LaFeO_3$ conc. var. 3=20852
$PbTiO_3$ — $PbZrO_3$ — $LaFeO_3$ system, antiferroelec. phase 4=28633
$PbTiO_3$–$SrSnO_3$ solid solutions 1=20575
lead titinate zirconate, dielectric consts., meas. 4=15563
Pb titanate zirconate ceramics, 4-77°K 2=8474
Pb titanate zirconate ceramics at v.l.f. 0=16021
Pb zirconate titanate ceramic ferroelectric resonators 4=28629
Pb zirconate-titanate, modified by Bi ferrite, dielectric constant 4=7049
$Pb(ZrTi)O_3$, modified, press. of 0-10 000 psi effect rel. to acoustic projectors 4=26117
$(Pb, Zr)TiO_3$ system, transition near 75°C 2=17039
$(PbZr)(TiZr)O_3$ solid soln. 2=8863, 15071
Pr oxides, dipole relaxation, rel. to crystal structure 3=8552
$RbNO_3$, absence of ferroelectricity, crystal struct. mechanism 4=4202
$RbNO_3$ single crystals, from room temp. to m.p. 4=22779
S powders, density var., 9200 Mc/s 4=22758
S, rhombic, high-voltage polarization, current flow meas. 4=10098
Sb, from i. r. props. 4=28672
Sb in Ge, solid solubility det. 3=3342
SbSI, transition, non-polar to ferroelec., lattice const. changes 4=20757
Se, amorphous, poly- and monocrystalline, dielectric const. 4=26057
Se, investigation, rel. to temp. 1=17818
Se, 100-400 kc/s, −180° to +40°C 0=627
Se, pure, relaxation phenomena 2=6516, 12559
Se, relaxation effects 1=10073
Se xerographic plate, photoinduced discharge 3=15613
Se:Br, 500 c/s-1 Mc/s, −40° to +160°C 0=10012
Si, capacitance and barrier layer in contact with electrolyte 0=13649
Si, 100-400 kc/s, −180 to + 40°C 0=627

one-dimensional, with simultaneous linear accumulation 4=2606
particle vertical distrib. in vertical flow 2=19472
particles across magnetic field 0=14975, 17087
percolation, band and site problems, two dimensional 3=11734
percolation processes, theory of fluctuations 0=4957
periodic potential, Brownian particle 3=23806
in phase space, model for dissociation of diatomic molecules 2=6228
potential barrier penetration in variable external field 2=21856
potential barrier penetration in variable external fld 3=83
quantum isotope effect 4=18116
quantum theory, steady soln. of Liouville's eqn. 0=14542
radiation, in inhomogeneous atmosphere, invariance principle 1=10454
radiation, integral eqn. soln. 0=4963
radiation in thick layer, asymptotes 4=18118
rate rel. to thermodynamic activity 4=17851
reaction diffusion kinetics, in binary systems 2=23950
review 0=2164
reactive diffusion, structure of surface scale 1=14291
self-diffusion, n.m.r. spin-echo meas. 3=24499
self-diffusion in simple dense fluids 0=19107
self-diffusion and velocity correlation 1=10453
in separation processes, transport equation application 4=14084
solute dispersion in fluid in laminar flow 2=19547

Diffusion—contd
- sound, in reverberation chambers 0=145
- sound, in small rooms 0=16812
- spectral diffusion decay in spin resonance expts. 2=3181
- spherical geometry, statistics 3=14199
- surface source at free convection in boundary layer with variable exchange 4=5238
- suspensions, thermodynamic theory 3=8984
- theory 0=16616
- theory of chemical reaction 0=21266
- theory, convergence improvement methods 4=24405
- thermal, in fluid-filled chambers with no convection, rel. to acoustic props. 4=27262
- thermal or matter, point source on tube axis, for tube source or not, obs. 4=5106
- thermal, mixtures, binary, stream direction and "forgotten effect" 4=2630
- thermal utilization factor in nuclear reactors, by ordinary theory 1=11051
- thermally activated linear response functions 4=16062
- and thermodynamic irreversible processes, motion equation of continua 4=24106
- three-component system, restrictions in analysis 4=8117
- time-dependent, two-dimensional, implicit method 2=9208
- transport of particles in scattering medium, quantum theory incoherent processes 0=9298
- in turbulence, under transverse velocity gradient 1=6835
- in turbulent field, stationary 4=5106
- turbulent, from point source with boundary layer flow, meas. 4=11149
- turbulent, by random-walk model 1=2709
- turbulent, in stratified fluid 4=29593
- turbulent, theory 0=8625
- turbulent, velocity autocorrelations of charged particles in magneto-ionic medium 0=16975
- universal equation due to localized impulse 1=16145
- Wigner-Seitz cell, calc. method 4=19888
- **acoustic waves**
  - See also Scattering, acoustic waves (subheading introduced in 1963).
  - halomethane—inert gas mixtures, ultrasonic dispersion 4=5246
  - in reverberation chamber, effect on absorption 4=14284
  - measurement, architectural acoustics, by crossed microphones 4=14307
  - reverberation chamber meas. of diffusivity 4=296
- **electromagnetic waves**
  - See also Scattering, electromagnetic waves (subheading introduced in 1963).
  - anisotropic, Chandrasekhar X, Y function introduction 4=709
  - dielectric wedge, right angled, calc. 4=27646
  - on diffraction, convex cylinder, short waves 4=690
  - ethyl alcohol, at mm wavelengths 3=1706
  - imperfect plane dielectric 4=27654
  - in medium filling half of three-dimensional space 3=5848
  - metal grating, double, plane, meas. 4=14890
  - methyl alcohol, at mm wavelengths 3=1706
  - stellar atmospheres and nebulae 3=9240
- **light**
  - See also Reflectivity; Scattering, light.
  - anisotropic atmosphere with reflecting boundary 2=19202
  - apparatus, recording indices of diffusion by reflection or by transmission 2=11504
  - asymptotic luminance in diffusing and absorbing medium 4=18431
  - coefficients, high-speed calc. from Rayleigh interference fringes 3=7356
  - crystals, Raman 1=19997
  - crystals, Raman 2=4114
  - definitions and meas. of diffusing power 1=5361
  - diffuse reflection by semi-infinite atmosphere 1=12830
  - in liquids, critical fluctuations and opalescence 0=14659
  - mastic suspensions 0=16900
  - in medium with specularly reflecting boundary 1=5237
  - in medium with specularly reflecting boundary 1=10451
  - mutual reflections between diffusing surfaces 1=5337
  - non-uniform media, radiative transfer, review 4=18117
  - opaque diffusers, total reflectance 2=22060
  - photographic emulsions, non-negative signals 3=3892

Diffusion—contd
- **light**—contd
  - plastics, determination of tint and greyness 1=245
  - plates and lenses, flare meas. method 3=16801
  - point source in diffusing medium, light distribution 0=10783
  - polystyrene solns., critical opalescence 0=6805
  - Rayleigh atmosphere, radiation emerging from top 1=6587-8
  - and reflection and transmission 4=324
  - resonance radiation, Bouguer's law 3=9597
  - in scattering and absorbing layer 2=15748
  - screens of high efficiency 0=8782
  - stellar atmospheres and nebulae, resonance radiation 3=16403
  - by surface with irregularities comparable with wavelength 3=9622
  - turbid media with plane-parallel surfaces 0=6905
  - two-layer medium with interface effects considered 4=11362
  - u.v. and visible, by ground surfaces of fused quartz 0=14787
  - Co^{2+} ions in organic solvents 3=10923
  - $KCl:Co^{2+}$ and $:Ni^{2+}$, meas. 3=10923
  - MgO surface, for reflectance standard 0.3-2.6 μ 3=1786
  - $NaCl:Co^{2+}$ and $:Ni^{2+}$, meas. 3=10923
  - Ni^{2+} ions in organic solvents 3=10923

Diffusion in gases
- See also Flow, gases.
- acetylene, in ethane and self-diffusion meas. 4=11238
- acoustic model 1=18461
- aerosols, phoresis 4=10658
- air—CO_2, binary diffusion coeffs. 4=24267
- air, at high temps., collision integrals 2=9314
- air, through bubble walls 0=6769
- ambipolar inertia-controlled diffusion 3=5462
- ammonia and diethyl ether, interdiffusion 3=9492

- arcs, electric, time var. 4=486
- atmosphere, medium-scale props. over 10-80 miles 2=12996
- atmosphere, nonlinear processes in convection 2=15184
- atmosphere, smoke study 4=30931
- atmosphere, turbulent, generalized theory 3=9026
- atmosphere, upper particle descent profile 2=4622
- atmosphere, upper, and vapour from sounding rocket 4=4779
- atmospheric dust, fall effect on cloud growth 4=26791
- atmospheric grenade glow clouds, rel. to atmosphere density 120-180 km 4=23772
- atmospheric, review 1=2562
- atmospheric, wind tunnel modelling 3=18500
- atom recombination at catalytic boundary 0=16370
- atomic N in molecular N 1=7913
- binary systems, determination from viscosity 3=7231
- binary, trace lighter component, formulae 3=16651
- Boltzmann's equation in integral form 0=98
- catalytic tubular reactors, of trace reactant 1=17244
- Cauchy equation in multi-dimensional space 1=10452
- charge carriers in elec. field, effect of space charge 4=11255
- coeff. in a plasma 1=5446
- coeffs. determ. from viscosity meas. 2=21938
- coeffs. by optical method, rel. to theory 2=65
- concentration-dependent equation, solution 1=175
- contribution to flow from Knudsen cell 2=19607
- correlation studies 4=29671
- from corresponding states and intermolecular potential 3=16650
- density effects, symmetries stationary isothermal diffusion 3=21426
- diffusion and heterogeneous reaction 1=11615
- diffusiophoresis in atmosphere 3=11417
- diffusivity, lateral, in diabatic conditions near ground, determ. from diffusion expts. 4=23738
- diphenylamine in CO_2, 32.3°C, 77 to 130.5 atm 2=17502
- discharge, electrodeless, free to ambipolar transition 3=5636
- discharge plasma, ambipolar diffusion rel. to electron density 4=14641
- discharge, reflex, plasma, enhanced 4=19048
- discontinuity across interface in aerosols 1=11632
- dispersion from instantaneous ground source 4=4762

Diffusion in gases—contd
dissociating gas, perturbation by catalytic probes 3=18430
in electric arcs 2=5319
electron drift velocity in hydrogen, nitrogen 3=9729
electron—negative ion streams, behaviour in elec. fields 1=4561
electrons, back diffusion in N_2, H_2, Ar 3=5693
electrons, drift vel./diffusion coeff. 3=12251
electrons, in H_2, D_2, He, with crossed elec. and mag. fields 2=17779
electrons and ions, diffusion coeff. 1=274
electrons, momentum transfer cross-section 3=14199
electrons in neon at 20°C and 1 atm. 0=9240
electrons in nitrogen, drift and diffusion 0=14973
electrons in NO plasma 2=3030
electrons in plasma in mag. field 1=9598
electrons in plasma in mag. field 1=9599
electrons, in scattering gas 3=5820
electrons, in upper atmosphere 2=4688
electrons in Van Allen belt 3=9112-13
equation, pre-exponential factor of temperature 1=11782-3
ethane, in ethylene, acetylene and self-diffusion meas. 4=11238
ethylene, in N_2 ethane and self-diffusion meas. 4=11238
evaporation, conditions 3=16649
forces on aerosols in diffusing gas mixtures 4=2169
free-molecule flow, around rigid body 0=19172
gas centrifuge, for isotope separation 0=11498
gas mixtures, transport processes 1=15953
gas with rotating molecules, kinetic theory 4=5230
gas—vapour critical region 4=21181
gaseous mixture separation by vapour current 1=20781
gaseous in porous media, graphite 4=233
glow clouds from grenades, diffusion coeff. determ. 4=10737
high-temperature, rel. to intermolecular potentials 2=2771
high temp., interpretation of data 0=3563
inert gases, mutual diffusion of binary mixtures (0, 15, 30, 45°C) 0=8702
inert, in terms of Morse potential 4=8241
from instantaneous source in gravity field 3=21427
interdiffusion coeff., for force constant determination of unlike molecular interaction 0=15786
interdiffusion in graphite 2=19610
interdiffusion in graphite 3=16652
ionized gas mixtures, separation effects 3=5626
ionized gases, charged particle coeff. meas., by diffusion wave method 3=16906
from ionized region in uniform flow 1=16275
ionosphere, plasma diffusion 4=10756
ionospheric F-region, review 2=898
ionospheric, F2-region, geomag. control 2=24041
ionospheric ionization, along geomag. field lines 2=4654
ions, in He plasma in magnetic field 1=13082
kinetic energy of diffusing particles in plasma and electron tubes 1=18816
kinetic theory, Maxwell—Chapman method 3=3825
Kirkendall effect 1=176
Kirkendall effect, absolute determ. of diffusion coeffs. 2=1192
Kirkendall effect, re-examination of data 1=18463
Lamm's theory coeffts., reln. to viscosity 3=21326
in liquids, meas., by saturation from gas phase 2=9265
mag. flux in plasma, eqn. 2=9583
measurement, absolute optical method 0=8697
measurement, using chromatography apparatus 1=12919
meas., using chromatography techniques 2=4580, 5052
measurement, gas chromatographic, and obstructive factors 4=24269
measurement, optical method 4=27216
meas., rapid, chromatographic techniques 3=11821
metal vapours, interdiffusivities with Ar at high temp. 4=24266
from meteor trails 0=18712
meteor trails, ionized, in atmosphere 2=4657
methane, in CO, N_2 and CF_4, and self-diffusion meas. 4=11238
methane, in terms of Morse potential 4=8241
mixing of two gases through capillary 2=11410
mixture, rel. to viscous transfer of momentum 2=15635
mixture, rel. to viscous transfer of momentum 3=5463

Diffusion in gases—contd
mixtures, self-diffusion 2=7247
molecular diffusion at high temp. 0=3563
molecular flow in isothermal enclosure 3=14201
multi-component boundary, dissociation effects 4=21179
multiple reaction vapour transport of solids 2=21474
optical meas., binary mixtures 4=11241
particles, small, in nonuniform atmosphere 4=20848
particulate matter in atmosphere 3=9023
in permeable solids 1=2513
plasma, ambipolar diffusion in weak mag. field 3=7603
plasma, anomalous, with current in magnetic field 3=14573
plasma, anomalous diffusion in mag. field 4=16470
plasma, anomalous diffusion, from micro-instabilities 3=5652
plasma, anomalous, in ion cyclotron reson. 4=29909
plasma, Bohm coefficient from instability meas. 4=2974
plasma, Brownian motion in mag. field 4=502
plasma, charge carriers, approx. calc. 3=21761
plasma, charged particles, in mag. field 3=21790
in plasma, of charged particles across magnetic field 4=11601
plasma, cold, highly ionized, in magnetic field 1=16322
plasma, collisional, across mag. field 4=499
plasma, current effects, classical and Bohm enhanced density—rad. rel. 4=27514
plasma, decay in mag. field 3=14591-2
plasma, decaying, meas. in mag. field 4=14643
plasma, diffusion decay in mag. field, theory 4=29908
plasma diffusion in stellarator 1=9616
plasma, with electron-ion recombination loss 2=7592
in plasma, exper. with inert gases and N in longit. mag. field 0=15023
plasma, extension of Schottky's theory 2=184
in plasma, of feebly ionized hydrogen 0=12617
plasma, fully ionized, particle propag. 3=7510
plasma, inert gases, transverse, in mag. field 4=5602
plasma ions, across mag. field 1=11931
plasma in mag. fld. 3=7522
plasma, in mag. field 4=501
plasma, in mag. field, Cs, not Bohm 4=27515
plasma, in magnetic field, effect of "drift" waves 3=24322
plasma, in mag. field, like-particle collisions 3=24286
plasma across a mag. field, theory 1=7077
plasma, in magnetic field, theory 2=188
plasma, in magnetic field, theory 3=403
plasma, in shock structure 2=3033
plasma behind shock front, rel. to precursor creation 4=18340
plasma, stable, mag., of charged particles 4=8693
plasma from stellarator 3=12195
plasma, theory, stochastic methods 3=12124
plasma, turbulent, in strong mag. field due to drift instab. 4=5666
plasma, weakly ionized, ambipolar diffusion 3=24282
plasma, weakly ionized, anomalous 4=18815
polar-nonpolar mixtures, mutual diffusion 2=13365
polar and polyatomic gases, mutual diffusion coeffs., calc. from viscosity meas. of binary mixtures 4=21180
in porous media 0=101
in porous media, rel. to pressure gradients 2=11409
in porous media at uniform pressure 2=1193
positive column, in longitudinal magnetic field, 3=14554
positive discharge column in mag. field, abnormal diffusion 1=13072
pressure diffusion in binary and complex mixtures 1=6891-3
quantum-mech. theory for screened Coulomb potential 1=18769
radioactive gases, calc. 2=15634, 19606
rarefied, rel. to outflow from point source into vacuum 2=1173
rectified diffusion of mass into gas bubbles 1=4313
rectified diffusion, thresholds 1=10506-7
resonance atoms, rel. to transport of resonance radiation 0=13394
ring discharges, electrodeless, diffusion-controlled, formation and decay times 4=18698
self-diffusion coeff., density expansion calc. 3=3829

Diffusion in gases—contd
self-diffusion theory 0=8688
sensitivity to intermol. potential, quantum calc. 4=11237
silicone droplets in gases in elec. field 1=15949
smoke clouds, in atmosphere 1=11647
spin, at low temps., quantum effects rel. to self-diffusion 4=8244
in sun, outer layer dynamics 0=4889
surface source at free convection in boundary layer with variable exchange 4=5238
in thermosphere 2=2472
transport of solid through gas phase 2=23948
turbulent, Bourret's eqn. 1=18462
turbulent, distribution of matter in atomosphere 0=12177
two-fluid model 0=16731
in vacuum gauge, McLeod effects with cold traps 4=8275
vapour transport of solids, diffusion mech. 2=15823
in vicinity of cavitation bubble 0=2182
water vapour through gas with suspended particles 1=11784
waves in ionized gases 0=5276
Ar, isotopic thermal, 127° to 653°K 4=5239
Ar, r.f. with mag. fld., enhanced 3=1944
argon, shock-ionized 1=11780
Ar–Br falling into air or He under gravity 2=9310
Ar—CO_2, binary diffusion coeffs. 4=24267
Ar—H_2, interdiffusion through capillary, pressure effect 4=27215
Ar—He, interdiffusion through capillary, pressure effect 4=27215
Ar–He, rel. to intermolecular potentials 2=2764
Ar–He system, intermolecular forces 0=14688
Ar–He system, mutual 0=8702
Ar–Xe system, mutual 0=8702
Ar, of Zn, temp. var. spectral absorpt. meas. 4=18244
BF_3, self-diffusion coeff. 2=2765
CF_4, in methane, meas. 4=11238
CH_4–O_2, rel. to intermolecular potentials 2=2764
CO, in methane, meas. 4=11238
CO-CO and CO-N_2 systems 3=7232
CO—O_2, rel. to intermolecular potentials 2=2764
CO_2 pulmonary, rel. to human cardiac output 3=3637
CO_2, self 4=29670
CO_2, self-diffusion coeffs. at 1180°–1680°K 2=19609
CO_2, self-diffusion, rel. to temp. 3=20033
CO_2—Ar, 290-470°K 4=27216
CO_2—CO, 290-470°K 4=27216
CO_2–H_2 system, intermolecular forces 0=14688
CO_2–He system, intermolecular forces 0=14688
CO_2, in He–N_2, by point source technique 0=10688
CO_2—N_2, 290-470°K 4=27216
CO_2–N_2 and CO_2–O_2, and intermol. potentials 2=2764
CO_2—SF_2, 290-470°K 4=27216
Cs atoms in inert gases 4=28142
Cs plasma current effects, classical and Bohm enhanced density--rad. rel. 4=27514
Cs plasma, in mag. field, not Bohm 4=27515
H, atomic, in Ar–He mixtures 0=5050
H atoms, self-diffusion, calc. 1=15913
H, and Morse potential parameters 4=29665
H, mutual diffusion of atoms and molecules 2=5053
H plasma, enhanced by ion cyclotron reson. 4=29910
H, self-diffusion, n.m.r. meas. 2=7246
H, H^- and H^+, in H at high temps. 2=2770
H and H_2 mixture, coeff. of mutual diffusion 4=14207
H through H_2 at 300-700°K 1=10541
H, in CO_2, CF_2Cl_2, Kr, Xe, meas. by T tracer 4=11240
hydrogen, dissociating, cal. 1=15913
H_2, electron diffusion 3=6391
H_2 enrichment of CO_2, in Laval nozzle 1=15929
H_2, mixtures with He, N_2, O_2, u.s. velocity meas. 0=5049
H_2, spin-diffusion at low temps., quantum effects 4=8244
H_2, spin-diffusion meas., 20°-55°K, rel. to ortho—para concn 4=8245
hydrogen, 20.35°K, assuming nine ortho spin states are distinguishable 3=8312
H_2–Ar 2=1194
H_2—Ar, 290-470°K 4=27216
H_2—CO, 290-470°K 4=27216
H_2—CO_2, 290-470°K 4=27216
$H_2^{1,2,3}$—Kr^{85} mixtures meas. 4=24268
H_2, into N_2 1=12919
H_2—N_2, 290-470°K 4=27216

Diffusion in gases—contd
H_2–Ne 2=1194
H_2–O_2, rel. to intermolecular potentials 2=2764
H_2—SF_6, 290-470°K 4=27216
H_2–Xe 2=1194
H_2O, molecules over ice 0=19508
H_2O, in air, teaching meas. 3=21425
H_2O–O_2, rel. to intermolecular potentials 2=2764
helium, selective diffusion through quartz 1=10542
He, thermal diffusion factor 1=8156
He^3, self, 1.7-4.2°K, from pulsed n.m.r. 4=16152
He^3, self-diffusion, 1·7–4·2°K. 3=178
He^3, spin-diffusion at low temps., quantum effects 4=8244
He^4, quantum corrections 1=6894
He—air, binary diffusion coeffs. 4=24267
He—air, 290-470°K 4=27216
He—Ar, binary diffusion coeffs. 4=24267
He—Ar, 290-470°K 4=27216
He—CO, 290-470°K 4=27216
He—CO_2, binary diffusion coeffs. 4=24267
He—CO_2, 290-470°K 4=27216
He in glasses, in vacuum applications 1=10010
He—H_2, interdiffusion through capillary, pressure effect 4=27215
He–Kr, interdiffusion coeff., temp. depend. 0=14691
He–N_2, rel. to intermolecular potentials 2=2764
He—N_2, 290-470°K 4=27216
He–Ne, interdiffusion coeff., temp. depend. 0=14691
He—SF_6, 290-470°K 4=27216
He–Xe system, mutual 0=8702
Hg, resonance atoms, rel. to transport of resonance radiation 0=13394
I discharge, positive column striations 4=8649
I in CO_2 in critical region 1=12811
K plasma current effects, classical and Bohm enhanced density—rad. rel. 4=27514
Kr, rel. to 12-6 potential 2=10288
Kr^{85}, in dense Ar gas, meas. 3=1720
Kr^{85}, in dense CO_2 gas, meas. 3=1720
Kr^{85}, in dense ethylene gas, meas. 3=1720
Kr^{85}, in dense He gas, meas. 3=1720
Kr^{85}, in dense Kr gas, meas. 3=1720
Kr^{85}, in dense N_2 gas, meas. 3=1720
Kr^{85} in He–Kr systems 2=17506
Kr^{85}, in Ne–Kr and Ar–Kr, meas. 3=3822
Li—Li gas mixtures, at high temps. 4=3860
Li—O gas mixtures, at high temps. 4=3860
N_2, electron diffusion 3=6391
N_2 $A^3\Sigma_u^+$ state, excited by microwave discharge 3=17579
N_2, in terms of Morse potential 4=8241
N_2–CO_2, near crit. point, Fick eqn. 2=17447
N_2, in methane and ethylene, meas. 4=11238
N_2, in other gases, in elec. field 1=15949
N_2–Ar, N_2–Xe, N_2–He mutual diffusion 2=5051
NH_3, with He, Ne and Xe 2=19608
Na vapour, optically oriented, spin relax. 4=22314
Na, vapour trails 2=7046
Ne, positive Ne ion diffusion and drift 4=21463
Ne–CO_2 1=6895
Ne–Xe, interdiffusion coeff., temp. depend 0=14691
Ni_2 + 1% Ti, in elec. arc 2=5319
O, atomic, in O_2, using tubular flow reactor 1=12920
O atoms, calc., at low temp. and press. 0=3565
O_2–Ar, O_2–Xe, O_2–He 2=5050
O—H gas mixtures, at high temps. 4=3860
O_2 plasma, isothermal, ambipolar, at high temps. 4=14642
Rb atoms in He 2=1963
S atoms, calc., at low temp. and press. 0=3565
SF_6—Ar, 290-470°K 4=27216
SF_6–CF_4 mixtures, 300°-350°K meas. 4=2725
SF_6—CO, 290-470°K 4=27216
SF_6—N_2, 290-470°K 4=27216
ZnS—HCl system, vapour transport of solid 3=8945
ZnS:I vapour-solvent system, solid transport rate 4=15768
thermal
aerosols in temp. gradient, various gases 0=4741
analysis 3=9493
atmosphere, of He, effects on composition 4=26805
in binary and complex mixtures 1=6891-3
binary gas mixtures, temp., pres. depend. 3=21428

Diffusion in gases—contd
  thermal—contd
    binary mixture, rough spheres of equal mass, diameter 3=11818
    binary mixtures, Chapman—Cowling scheme, simpler formula 3=7235
    binary mixtures, Chapman—Cowling second approx. 4=21178
    binary mixtures, effect on convection 3=19047
    binary mixtures, rigorous and approx. theory 3=7233
    binary mixtures, simpler formulae 3=3821
    binary mixtures, simplified Kihara—Mason approx. 3=18843

Diffusion in liquids—contd
turbulent, longitudinal, in finite channel, meas. method 4=11162
turbulent mass transfer near fluid interface 1=18371
in turbulent wake of porous cylinder containing electrolyte 1=6836
2-stream mixing in pipeline 2=19519
uni-univalent halides, rel. to struct. 2=16666
unsteady convective, one-dimensional problem 3=11786
use of interferometric refractometer 2=1254
viscoelastic, vorticity diffusion 0=16680, 19072
water, diffusion motion of atoms, from neutron scatt. 0=79
water, self-diffusion coeff. 0=3513
water—glycine—KCl 3=1681
water, in Na carboxymethyl cellulose gel 3=1403
weak electrolytes 0=19104
$AgNO_3$—$NaNO_3$ molten mixtures, interionic diffusion 4=29617
Ag, Sb and Ag diffusion 4=24196
Ar, self-diffusion 0=3514
Ar, self-diffusion, config. relax. model 4=8163
Ar, self-diffusion, meas. and interpretation 2=13328
Ar, self, transport theories criticism 4=18187
in Ar, of Ar^{37}, Kr and HT 0=14635
Ar–Kr mixtures, self-diffusion, coeff. ratio 2=11358
Bi, Ag diffusion, 300-700°C 3=21331
CCl_4, diffusion of H_2, D_2, N_2, Ar, CH_4, CF_4 4=18189
CF_4, effect on n.m.r. 3=21412
CF_4—Ar, effect on n.m.r. 3=21412
CH_4, effect on n.m.r. 3=21412
CH_4, self-diffusion 2=13328
CH_4—Ar, effect on n.m.r. 3=21412
CO, self diffusion, 69-78°K 4=21118
Cd in molten $CdCl_2$, self-diffusion 2=15574
Cd, of U 4=5167
Cu, diffusion of Si, Ti, Cr, Fe, Co and Ni rel. to rate of soln., expt. 4=8194
Fe^{57} in glycerine, and Mössbauer line broadening 4=21119
Fe, liquid, diffusion of Si, S and Mn 1=1738
Fe—C and solution rate, 7 elements 4=18190
GeO_2, of O^{18} 3=20224
H, liquid, molecular 1=8137
H_2O, self-diffusion, from quasi-elastic scatt. of cold neutrons 1=9386
H_2O—D_2O mixtures, mutual diffusion 1=2752
HPO^{2-} ion, labelled, in various liquids 0=3511
H_2SO_4, aq. soln., meas. at 25°C 3=9448
He in liq. H_2 2=1140
He II—He^3 mixtures, theory 3=1881
in He II, He^3 (0.7-2.1°K) 0=19539
He^3, in liq. He II, theory 3=19088
He^3, self-diffusion 0=1069, 5230, 19542
He^3, self-diffusion 1=18691
He^3, self-diffusion, down to 0.025°K 2=17712
He^3, self-diffusion, 0.35°-3°K meas. 3=19085
He^3, self-diffusion, theory and expt. compared 1=2918
He^3, self and mutual 0=8882
He^3, self, temp. var., from pulsed n.m.r. 4=16317
He^3—He^4, λ-point to 0.6°K 2=134
He^3—He^4, λ-pt to 0.6°K 3=3939
He^4—He^3 solutions, Boltzmann gas model 0=8863
Hg, self-diffusion, expt. 4=24192
In, Haeffner-effect, 200-550°C, self-diffusion 2=11362
In—Pb alloys, self-diffusion 0=2166, 12417
In—Sn alloy, at eutectic concn. 1=2751
In—Sn alloy, self-diffusion for In^{114} and Sn^{113} 1=8113
K, Haeffner-effect, 80-250°C, self-diffusion 2=11362
K, molten, self-diffusion 3=16610-11
KCl, Na^{22} diffusion, rel. to temp. 4=8193
KNO_3—$LiNO_3$, of Li^6, Na^{22}, K^{42}, ratio differences from one 4=16103
Kr in liq. H_2 2=1140
Kr, self-diffusion, meas. and interpretation 2=13328
N_2, in liq. O, gas phase method 4=5168
N_2—CO_2, near crit. point, Fick eqn. 2=17447
N_2, in liq. O_2, meas. 2=9266
NH_3 liquid, self-diffusion 1=15855
NH_3—metal solutions, electron self-diffusion 2=17488
NH_3, self 4=14155
Na^{22} in fused $NaNO_3$, diffusion coeff., high pressure 4=21120
NaCl, diffusion of unlike ions 4=27167
NaI, I^{131} diffusion, rel. to temp. 4=8193

Diffusion in liquids—contd
NaI—KCl, Na^{22} diffusion, rel. to temp. 4=8193
NaI, Na^{22} diffusion, rel. to temp. 4=8193
Na_2SO_4—H_2SO_4—H_2O system, isothermal 3=1680
Nb, in cast Fe, by electrolysis 3=5431
Ne, HT and D_2 diffusion in liq. hydrogen 1=10510
O_2, in organic solns., rel. to fluoresc. quenching 2=9282
Pb, time-dependent pair correlations, by neutron scatt. 0=937
Pb—Sb alloys, Pb and Sb diffusion 4=164
Rb, Haeffner-effect 70-400°C, self-diffusion 2=11362
SF_6, 221°-315°K meas. 4=2715
Se and Hg, in Te 2=18610
Si, in cast Fe, by electrolysis 3=5431
Si, in liquid, rel. to distribution coefficient and impurities 4=15488
Sn, self-diffusion 2=13329
Sn, self-diffusion, det. using radioisotopes 2=21900
Sn, self-diffusion in Sn plus Zn mixture 3=5432
TcO_4^-, by conductivity, N/10 solns. 25°C 3=16609
Ti, in cast Fe, by electrolysis 3=5431
Tl amalgams, interdiffusion meas. 3=21332
Tl ion in fused TlCl, temp. depend. 3=5433
in U, molten, diffusion of Ce and Zr 0=3515
Va, in cast Fe, by electrolysis 3=5431
Xe, self-diffusion, meas. and interpretation 2=13328
Xe^{129}, in solid and liq. Xe, meas. 3=18154
Zn, self-diffusion 4=5169
Zn, self-diffusion in Sn plus Zn mixture 3=5432
Zn, self-diffusion, temp. depend. 0=5008

water vapour, in porous materials 3=11819
wet granular materials, gaseous diffusion 1=11588
Zircaloy-2, α-phase, hydrogen diffusion 0=18406
Zircaloy-2, of H, thermal, theory 4=6882
zone melting, impurity motion, infinite ingot 3=20802

Diffusion in solids —contd
zone refining, effects 4=23321
Ag, diffusion of impurities 1=14316
Ag, diffusion of Ni and Co 3=22814
Ag, electric transfer 2=6374
Ag, electrical transfer, in AgZn 2=8247
Ag, elec. transfer in Al, effective charge 2=10416
Ag, grain boundary self-diffusion, in elec. fields 4=9992
Ag, grain boundary and vol. diffusion in sintering 4=28482
Ag ion migration in α-quartz 4=25966
Ag migration in quartz in elec. fields 1=12404
Ag, mobility, effective charge of Ag ions 2=18609
Ag, into rutile and perovskite ceramics 1=17564
Ag in quartz, with amorphous—cryst. transition 3=13396
Ag, self-diffusion 0=1600, 2828, 11638, 20840
Ag, self-diffusion in β-AgMg 4=15494
Ag, self-diffusion in AgZn, temp. depend. 2=8247
Ag, self-diffusion, effect of plastic torsional deformation 1=14321
Ag, self-diffusion, effect of stress and deformation 1=10012
Ag, self-diffusion during plastic deformation in torsion 1=7598
Ag, self-diffusion during torsional deformation 4=9989
Ag, self-diffusivity in twist boundaries 3=22820
Ag, self, grain boundaries, and charge carrier type 4=9991
Ag, self, meas., temp. var., by radioactive tracer 4=12802
Ag, self, surface 3=22821
Ag, substitutional impurities, thermal diffusion 4=17440
Ag, surface diffusion coeffts. meas. 3=17792
Ag, surface self-diffusion and faceting 3=25292
Ag, in Ag, in d.c. field 1=14319
Ag, of Ag, surface 3=20232
Ag, at Ag–AgCd interface, tracer study 0=1606
Ag, in AgBr, press. and temp. depend. 1=989
Ag, in Ag_2Te films, activation energy 1=8957
Ag, in Al, volume and boundary rates, temp. depend. 1=14299
Ag in Al—Ag alloy, rel. to precipitation 3=18356
Ag in BiTe 2=18607
Ag, in Bi_2Te, meas. 3=12998
Ag, in Cu bicrystals, grain boundary slide 3=6533
Ag in Cu and Cu—Ag alloy 1=986
Ag in Cu, effect of Be impurities 0=4303
Ag^{110}, in Cu, effect of Sb or Be 0=11647
Ag, in Cu, plastically deformed 1=3689
Ag, in Cu_2O 0=11639
Ag, in Cu_2O, new acceptor energy level 1=19876
Ag of Fe, Co, Ni, discrepancies 4=20305
Ag of Fe, Co, Ni, poss. surface effects 4=12800-1
Ag^{110} in GaAs, 600° to 1000°C 3=13002
Ag in Ge 1=19802
Ag, in Ge 2=12454, 14458
Ag, in Ge, in elec. field 0=15870
Ag on Ge surfaces, 200°–700°C 1=19805
Ag, on Ge surfaces, 200°–700°C 2=8246
Ag, in Ni, in d.c. current 2=18608, 23209
Ag, of Pd, meas. and analysis 4=6870
Ag, in Si, 1100-1350°C 1=3688
Ag^{110}, in Zn single crystals, anisotropy 2=2101
Ag—Au solid solutions, self-diffusion meas. 3=6538
AgBr, defect structure 2=3952
AgBr, mobile Ag ions rel. to latent-image formation 3=11948
α-Ag–Cd alloys and brass, anelastic meas. 2=3945
Ag-Cd alloys, mutual diffusion, Zener relaxation in α-phase 4=28981
AgCl, single crystals, Ag^+, Cl^- and Cd^{++} diffusion 0=20842
AgCl, of Cl^{36}, temp. var. 4=9996
Ag halides, anion diffusion at low temp., impurity effects, calc. 1=2391
Ag halides, ionic transport processes 3=13007
AgI, diffusion of Ag at high pressures 2=18605
Ag—Ni alloys, Fick's first eqn. 3=15503
Ag—Pd alloys, Pd self-diffusion coeff. at 850°C and 896°C 4=9994
AgS, thermal self-diffusion in S vapour 4=9990
Ag—Zn alloys, of Ag, Zn, under elec. field 3=20235
AgZn, nonequilib., deformation enhanced 2=10408

Diffusion in solids—contd
Al, diffusion of Fe, Ni, Co, dislocation short-circuiting models 4=1506
Al, electrolytic self-diffusion 4=17439
Al, mobility, effective charge of Al ions 2=18609
Al monocrystals, Zn diffusion, effect of mosaic structure 1=6110
Al, self-diffusion, activation energy 0=20843
Al, self-diffusion, determ. by electrotransport meas. 4=28486
Al, self-diffusion at 500-570°C 1=14325
Al^{26}, in Al, 450°–650°C 2=12448
Al in Al_2O_3 2=21056
Al, As, counterdiffusion in Cu 2=21058
Al, in Cr, during vacuum distillation 2=12936
Al, in Fe—Al alloys 1=14300
Al, in Fe—Al alloys, in d.c. field 1=15163
Al, H distrib., autoradiography 4=2106
Al, Sb diffusion, under elec. field 3=22830
Al in Ti 1=17552
Al—Ag alloys, along dislocations 1=12650
Al–Li alloys, strain-induced, during creep 2=4469
AlSb, diffusion of O 1=17712
Al–U system, layer growth during interdiffusion 2=3937
Al—Zn alloys, Mg and mutual diffusion, Mg conc. depend. 4=28477
Al—Zr interdiffusion 4=28478
Ar, self-diffusion coeff., calc. 1=11223
Ar, solid, self-diffusion coeff. 2=18595
Ar^{41} in CaF_2, expt. and theory 2=18596
Ar in CaF_2, as model for fission gas transport in UO_2 4=25466
As in Ge, 580°-650°C 2=21065
As in Ge, solid solubility det. 3=3342
As in Ge, thermoelectric meas. 1=17553
As, in Ge, from vapour phase 1=7592
As, in Si, 1100°-1350°C meas. 3=10689
Au, bond, formation and growth 0=8143
Au, heated surfaces, impurity effects 2=6845
Au, mobility, effective charge of Au ions 2=18609
Au, self, vacancies due to deform. effect, theory 4=28443
Au in solid gold, electrical transport 2=6365
Au, substitutional impurities, thermal diffusion 4=17440
Au, surface diffusion in whiskers 1=8342
Au, surface-marker motion induced by current 2=2095
Au, surface self-diffusion study, 272°-950°C 4=25963
Au, in a temp. gradient 2=7444
Au, vacancies and divacancies 3=4863
Au, of Ag, surface 3=20232
Au, of Ag, surface effects 4=10603
Au in $BiTe_3$ 3=17781
Au in CdTe 2=21062
Au, in Cu, grain boundary diffusion 3=2824
Au, in Cu, 360-500°C, meas. by elastic scatt. of protons
Au and Cu on Cu, surface diffusion 4=15487
Au, in Si, with and without d.c. field, temp. depend. 1=3756
Au, in Si, interstitial—substitutional equil. meas. 4=6878
Au^{198} in Zn, anisotropic 3=17793
Au–Al layered films, heat treatment obs. 2=6364
Au—Cd alloys, self-diffusion of components 1=14306
Au—In system, below 155.4°C 4=22618
Au—Ni alloys, self and interdiffusion 1=980
in Au—Pb evap. films, vacancy mechanism 3=20226
Au—Pt system, Kirkendall effect 1=14312-13
B, redistribution in Si due to oxidation 2=21071
B in Si 1=14301
B, in Si 1=14315
B, in Si, concn-depend., calc. 4=9993
B in Si, 1100° to 1300°C 4=20303
B, in Si, through oxide layer 3=10690
B in Si redistribution due to oxidation calc. 4=25967
B into Si, through Si oxide layer 3=8453
B, in Si, through SiO_2 layer, anomalous 3=17789
B, in Si, surface film removal 4=20384
Ba, through sintered Ni cathode 0=7132
Ba, in SrO, on oxide-coated cathode 2=9616
Be, proton-bombarded of H, and agglomeration 4=15484
Be, in Ge 0=15927
Be in Ge, 720–920°C 1=7593
BeO, irradiated, He diffusion after annealing, from specific heat below 4°K 3=15509

Diffusion in solids—contd
Bi, of Ag^{110}, d.c.-induced, analysis 4=12785
Bi in Ge, solid solubility det. 3=3342
Bi, in Pb–Ti solid soln. 2=3941
Bi and Sb interface, anomalies 1=14302
Bi_2O_3, Bi self-diffusion, effect of phase transformation 4=6867
Bi_2Te_3, Ag diffusion 2=18606
Bi_2Se_3, diffusion of Fe and Cd 0=6056
Bi_2Se_3, doping activation energy 3=8516
Bi_2Te_3, Cd diffusion and solubility 4=1507
Bi_2Te_3—Bi_2Se_3, of Ag, and escape, effect of atmosphere 3=20219
C atoms in austenite, growth of ferrite centres 2=23897
C, from contacts into CdS layers 0=1925
C atoms in Fe 1=20126
C^{12} and C^{13} in pure Fe, disaccommodation meas. 0=13786
C in Fe, Co, Ni, Ti, Ta, W, by electric fields 3=20236
C, in Fe, grain-size effects 1=3683
C in Fe, mobility, rel. to pressure 3=20234
C, in α–Fe, during precipitation 0=15866
C in Fe, pressure influence on time of stay 1=6118
C in α-Fe, temp. var. 4=28488
C, in martensite, derivation of diffusion coeff. 0=15850
C film on Ni, Ni oxide diffusion rel. to temp. 2=4490
C^{14} in Si, 1070°-1400°C 2=3939
C in steel, rel. to ageing 1=6573-8
C, in Ti, 1223-1923°K 4=1519
C, pyrolytic, of Th, activation energy 4=6869
CO adsorbed in W 1=20742
CO, in Ni, at 800°C 0=12120
CO, on W 0=3325
CO_2 in "Aerosil" silica 3=18399
Ca^{2+} ions in NaCl–$CaCl_2$ crystals 2=604, 3938
Ca^{45} ions in NaCl–$CaCl_2$ mixed crystals 0=6062
Ca, in Pt, thermionic emission study 0=6061
calcium aluminoborate glasses, O diffusion 4=28610
calcium aluminosilicate glasses, O diffusion 4=28610
$CaAl_2Si_4O_{12}.6H_2O$, Ca^{2+} and Si^{2+} differential exchange, self-diffusion coeffs., calc. 4=30572
CaF_2, pure, on annealing in O_2 and air 4=12787
CaF_2, of O_2 activation energy meas. 4=12786
Cd, elec. migration, current density depend. 1=14304
Cd, lattice and grain boundary diffusion 0=17975
Cd, migration on W surface 1=20693
Cd, mobility, effective charge of Cd ions 2=18609
Cd, in Ag films 2=10910
Cd, at Ag–AgCd interface, tracer study 0=1606
Cd, in AgBr, pure and Cd-doped 0=9916
Cd in CdS, meas. analysis 4=15485
Cd, in Cu, effect of additional Cd 2=21075
Cd, in Cu, grain-boundary and volume diffusion 2=6383
Cd in GaAs 1=6111
Cd, in GaAs, using radioactive tracers 0=9918
Cd, in Ge, radioactive tracer method 0=553
Cd in InSb 3=17784
Cd, in MgCd alloy 2=15060
Cd^{115} into $MgCd_3$, effect of ordering 4=25965
Cd in NaCl meas. from colloidal coloration 4=28491
Cd^{115m} in Zn, anisotropic 3=17793
$CdGeAs_2$ 3=8518
CdS, decomposition products along dislocation lines, rel. to irradiation 4=9985
CdS, diffusion controlled evaporation 4=27389
CdS, In diffusion in electric fields 3=13052
CdSe, diffusion of dopants, conduction mechanism study 1=12444
$CdSnAs_2$ 3=8518
CdTe, intercrystalline, 350-580°C 4=1508
Cd telluride, surface layer investigation 0=7937
Ce, in Fe, distrib. on crystallization 3=20229
Cl^- in CsCl, 230°-500°C 2=12449
Cl^-, in KI 1=7594-5
Co, diffusion in Sn crystals 2=605
Co in Ag, coeff. rel. to temp. 1=14317
Co and Ag in ordered and disordered CuZn 1=10009
Co, in CoTe polycrystals 3=20221
Co^{60}, in Cu, mobility and effective charge 2=18597
Co in Ge 1=19802
Co, in Mo–Ni alloys, plastic flow effects 1=14324
Co, of W, by electric current, 1100-1350°C 3=17782
Co–C, C diffusion rel. to temp. 4=20295

Diffusion in solids—contd
Co—Cu interdiffusion coeff. mechanism 4=12789
Co–Ni alloys, Co^{60} and Ni^{63} activation energies 2=23202
Co—Ni alloys, of Co and Ni, mag. effects, near Curie temp. 3=15514
Co—Ni interdiffusion coeff. mechanism 4=12789
Cr in Al, 250-605°C 4=22610
Cr in Mn, rel. to heating, 1200°-1350°C 2=23201
Cr ions in Ni–Cr under electric field 1=7596
Cr in Ni—Cr—Fe, 1294°C 3=20231
Cr, atomic diffusion in Ti-Cr system 0=20844
Cr–Fe alloys, components migration, in d.c. field 1=12655
Cr–Mo, mutual diffusion during sintering 0=12070
Cr–S–N system, reactive diffusion 1=14311
Cs^{137}, radioactive, in NaCl monocrystal 2=603
Cs through Ta hot wall in diode 2=11705
Cs vapour in porous Mo, rel. to Cs surface ionization 2=11623
CsBr, ionic, rel. to elec. conductivity, 300-550°C 0=9917
CsI, ionic, rel. to elec. conductivity, 300-550°C 0=9917
Cu, rel. to coalescence of pores 1=4075
Cu, rel. to coalescence of pores 1=10276
Cu, creep at 1050°C, mechanism 1=20358
Cu, creep at 1050°C, mechanism 2=21435
Cu, in diamond, rel. to optimum impurity size 2=12450
Cu, into dislocation-free Ge 0=1588
Cu, electric transfer 2=6374
Cu, electrical transport of Ag 4=20307
Cu in extrinsic and intrinsic Ge, Si and GaAs 4=12791
Cu, by impurity thermionic emission 3=4203
Cu, migration of He-filled bubbles 4=30573
Cu, mobility, effective charge of Cu ions 2=18609
Cu, in polycryst. Ag_2Se 2=12459
Cu rods, brass-cored, mutual diffusion, effect of press., rel. to diffusion-induced porosity 4=15486
Cu, self-diffusion, dislocation blocks and grain growth 0=15855
Cu, self-diffusion energy 4=1455
Cu, self-diffusion, in healing of surface defects 0=6047
Cu, self-diffusion, role of divacancy migration 0=17958
Cu, self, surface, oxygen pressure, impurity effects 4=28487
Cu, substitutional impurities, thermal diffusion 4=17440
Cu, surface, rel. to defect self-healing 4=12744
Cu, surface-marker motion induced by current 2=2096
Cu^+, surface mobility on Cu_2O 1=3765
Cu, in a temp gradient 2=7444
Cu, vacancy migration, effect of impurity atom 2=3935
Cu, volume diffusion, under α-irradiation 1=14351
Cu, zone-refining of tracers 4=23336
Cu, in AlSb 0=9915
Cu, in Au crystals in boiling HCl 3=4888
Cu and Au on Cu, surface diffusion 4=15487
Cu, in Bi_2Te_3, anisotropic 0=11643
Cu, in BiTe, change of elec. props. 2=10484
Cu in CdS crystals 1=3684
Cu, in Cu_2O 2=14434
Cu, in GaAs, n-type, 575° to 750°C rel. to resistivity and energy levels 2=23384
Cu, in Ge, heat of soln. calc. 0=7863
Cu, in Ge, high-temp. mobility 1=987
Cu, Ge surface diffusion 4=22611
Cu, in Ge: Sb, high-temp. mobility, Cu–Sb interact. 1=987
Cu, H_2 diffusion 3=20220
Cu, in InSb, interstitial, mechanisms 3=17783
Cu, in Ni films, 200-630°C 2=6373
Cu, in Ni, by X-ray spectra of double layer 2=21053
Cu in Si, precipitation 1=10274
Cu, of Pd, meas. and analysis 4=6870
Cu, Sb^{124} diffusion, 560°-896°C 4=22609
Cu, Tl diffusion, 785°-996°C 3=22826
Cu, in ZnS single crystals 2=6622
Cu, in ZnS:In, luminescence effect 2=6623
CuI, films on alkali halide crystals 0=20847
Cu–Ni alloy system, rel. to composition 2=21059
Cu—Ni, alloy system, rel. to composition 3=6532
Cu—Ni interdiffusion coeff. mechanism 4=12789
Cu–Ni, mutual diffusion during sintering 0=12070
Cu—Ni, powder to alloy homogenization 4=26550
Cu—Ni powder compacts, interdiffusion, X-ray diffraction study 1=11225
CuO, CuO_2, of O_2, in CuO film growth in O_2 3=23516

Diffusion in solids—contd

- Cu_2O, O diffusion 3=22735
- Cu—Sn, thermal, in mixed phases 4=9984
- Cu—Zn alloy, f.c.c., torsional deform. 3=12999
- Cu—Zn alloys, mechanism of sulphitation 1=1439
- d in Al, by d + d → He^3 + n 3=17352
- D, in deuteron-irradiated Cu 0=13559
- D, in Ta, activation energy, d-irrad. effects 0=17979
- F^{19}, in $CaF_2 : Sm^{2+}$, n.m.r. narrowing 3=23271
- Fe, b.c.c. 4=25964
- Fe, diffusion growth of grains, in recrystallization 2=23888
- Fe and ferritic steels, of H, Fick's law modification 4=6873
- Fe films, from conductivity, electrical and activation energy 3=15538
- α-Fe, internal friction due to H and D 1=14305
- Fe, meteoritic, thermal diffusivity 3=11526
- Fe^{55}, other tracers, in b.c.c. transition metals 2=6375
- Fe, in oxidation of Armco iron 1=6112
- Fe, self, bulk and intercryst., effect of Ti, up to 1% wt. 3=22812
- Fe, self-diffusion 1=17556
- Fe, self-diffusion 2=6368
- Fe, self-diffusion in α, γ and δ phases 3=25290
- Fe, self-diffusion in α-Fe and γ-Fe 0=9919
- Fe, self-diffusion and diffusion of Cr 0=11638
- Fe, self-diffusion, in grain boundaries, impurity separation 0=17970
- α-Fe, self-diffusion in large temp. gradient 1=2393
- Fe, self diffusion above 1350°C 4=9988
- Fe, self-diffusion, creep rate, at sub-melting temp. 4=23164
- Fe, self-diffusion, effect of Sn and Sb additions 4=12794
- Fe, self-diffusion, effect of stress and deformation 1=10012
- Fe, self, frequency rather than activation as cause 4=1514
- Fe, self, no effect due to Ce 3=22813
- Fe, α, self, var. with plastic compression, 742-885°C 4=6874
- Fe, sintered α and γ phases, failure mechanisms 0=8126
- Fe, surface self-diffusion after vac. anneal. 3=13003
- α-Fe, thermal diffusion of carbon 1=3682
- γ-Fe, thermal diffusion of carbon 1=3682
- Fe, volume diffusion across oxide phase boundary rel. to oxidation rate 4=10635
- $Fe^{55,59}$, in Ag and Cu, isotope effect, comp. with theory 1=4993
- α-Fe, diff. of Au,Co,Ni, effect of ferromagnetism 3=22810
- Fe, in Be 2=12455
- Fe (carbonyl), 1110°-1240°K, by field-emission technique 2=14460
- Fe, Co, Ni in Ag, rel. to solubilities 3=13006
- δ-Fe, diff. of Co^{60} and Fe^{59} 3=22811
- Fe, Co and Ni, in Au, meas. 3=8449
- Fe, Cr in βU 3=10691
- Fe^{55} , in Cu, mobility and effective charge 2=18597
- Fe^{59} in γ-Fe self-diffusion coeff., grain size effect, radioactive tracer meas. 4=30581
- Fe, in Fe—Al alloys 1=14300
- Fe, in Fe—Al alloys, in d.c. field 1=15163
- Fe, in Fe—Al alloys, volume pressure effects, 1100-1250°C 1=11226
- Fe, in Fe—C, in d.c. field, temp. depend. 1=12657
- Fe, in Fe—Cr alloy, high-temp. plastic deformation 1=14309
- Fe in Fe—Cu alloys 1=17557
- Fe^{59} in α-Fe_2O_3 3=22807
- Fe in Ge 1=19802
- Fe, radioactive, in Ni, role of pores, impurities 2=12462
- Fe, in Ni, by X-ray spectra of double layer 2=21053
- Fe, Ni, Co, interdiffusion coeffs. in Al 2=21057
- Fe in Ni—Cr basis polycomponent alloy 3=20231
- Fe, P diffusion, radiometric study 4=20294
- Fe, α, γ, δ, of P, 1250-1350°C 4=17442
- Fe, of P, 700-890°C, alloying effects 4=20296
- α-Fe, sulphur diffusion to grain boundaries 1=3690-1
- Fe, in Si, 30°-85°C 3=13066
- $Fe^{55,59}$ in Ti and Ti—Nb alloys 3=20233
- Fe, in TiO_2, 950°-1050°C 2=6369
- in Fe, of solid and liq. Zn, inert-marker technique 4=1515
- Fe—Al alloys, self-diffusion in elec. field, radioactive tracer study 4=25968
- Fe alloy, with Al, C, Ni, S, Si, effects of phase transition 0=8268

Diffusion in solids—contd

- Fe—C, C diffusion rel. to temp. 4=20295
- Fe—C solid solns., diffusion after-effects 0=13819
- Fe—Ce, Fe self-diffusion, Ce content depend. 4=12793
- Fe—Mg alloys, Fe self-diffusion, rel. to small Mg additions 4=15490
- Fe—Mo alloys, components migration, in d.c. field 1=12655
- Fe—Mo—C, Fe^{59} diffusion, differential γ-ray meas. 4=12779
- FeO electrolysis, ~ 1000°C 4=29227
- Fe_2O_3 on porcelain surface, thermal 4=30577
- Fe_3O_4, measurement 1=6113
- Fe—Si alloys, boundary migration 0=20828-9
- Fe—V alloy, self-diffusion, temp. depend., ferromag. spin ordering 1=2392
- Fe—W alloys, W migration, in d.c. field 1=12655
- GaAs, diffusion of 14 atoms, review 4=22612
- GaAs Esaki diode, interstitial, rel. to deterioration 4=26078
- GaAs injection lasers, diffusion problems 4=22613
- GaAs junctions, prep. by Zn and Sn double diffusion 4=26069
- GaAs, self-diffusion and diffusion of Cd, Zn, S, Se 1=4991
- GaAs, stress effects of doping with Se, Te, Zn and Cd 4=26045
- GaAs, Ag diffusion 4=1512
- GaAs, Cd diffusion, rel. to dislocations 4=9986
- GaAs, of Cd, In, interstitial—vacancy mechanism 4=12792
- GaAs to GaP, by solid-state diffusion 2=21064
- GaAs, Li diffusion, Hall effect meas. 4=15537
- GaAs, S, Se and Te diffusion, n—p junction formation 4=17441
- GaAs with SiO_2 films, Zn diffusion 4=22616
- GaAs, Zn and Cd diffusion, rel. to surface masking 3=25289
- GaAs, Zn diffusion, to achieve low surface concs. 4=22614
- GaAs, Zn diffusion, mechanism 4=4071
- GaP, Zn diffusion and solubility 3=10686
- GaSb, diffusion of O 1=17712
- Ga, in Si, vacancy mechanism, irradiation effect 2=12458
- Ge, rel. to annealing 3=22750

- Ge^{71}, in Ge, self-diffusion 2=2093
- Ge, of He 4=28490
- Ge, O diffusion, i. r. absorpt. band, dominant, stress-induced dichroism meas. 4=28485
- Ge, Sb diffusion, rel. to local electric fields, 750°-900°C 4=6871
- Ge, diffusion of Sb and As, rel. to Sb and As surface concs. 4=30574
- Ge, Sb or In diffusion, dislocations effects 4=1511
- Ge—Si system, heterodiffusion, electron-diffraction study 3=22808
- Ge with Sn, disloc., effect on boundary 4=25962
- GeO_2, of O^{18} 3=20224
- H, in Au, diffusion coeffs. 2=14459
- H, in Ba getters 2=5086
- H and vacancies, in Cu 3=15481
- H, in Fe and Pd electrodes, overvoltage study 0=8309
- H and D in fused quartz 2=6366
- H in Fe 2=23204
- H in metals, permeation 400° to 900°C 2=12457
- H in Mg—0.6% wt Zr alloy, ZrH precipitation 2=4515
- H in Mo, yield and flow stress 2=6737
- H, in Ni, mechanism from elec. meas. 2=21067
- H in Ni, W, Mo, Fe, influence of glow discharge 2=21074

Diffusion in solids—contd
H, in Pd, effect of concn. discontinuity, theory 1=17555
H in Pd, electrochemical method 2=23207
H, in proton-irradiated steel, constant calc. 2=21069
H in quartz 3=8452
H in γ-TiH_2 2=2097
H in ZrH 2=6367
hydrogen—deuterium in fused silica, i.r. study 1=1475
H_2, in iron 0=20723
H_2, in mild steel cylinders at 65°C, deviation from Fick's laws 1=990
H_2, in Ni, effect of plastic deformation 0=15869
H_2, in Pd 0=12069
H_2 in Pd, mass spectrometry 3=2829
H_2, in rolling surfaces with water-accelerated fatigue 3=25644
H_2, in Vycor glass 0=5051
hydrogen in Zircaloy-2, heat of transport 1=20581
He, in fused quartz 1=3685
He, in Vycor glass 0=5051
He^3, β-phase, rel. to nuc. mag. relaxation 4=14505
He^3, self-diffusion 0=1069
αHe^3, self-diffusion, rel. to lattice defects 3=8422
He^3, solid, self-diffusion meas. 3=5574
He^3 in Ti, temp. depend. 1=10011
Hf, O_2 diffusion, 800° and 950°C 4=6872
Hg whiskers, surface 4=4559
HgTe, intercrystalline, 350-580°C 4=1508
HgTe—CdTe 3=17786
I^- films adsorbed on Cu and Al, surface self-diffusion of I^- 4=15489
I^-, in KCl and NaCl 1=7594-5
I^{131}, in ThO_2 0=15874
In, in p-type CdTe, meas. 3=22806
In in Cu_2O 2=21060
In, in GaSb, elec. props. depend. 0=4359
In, in Ge 2=2098, 8243
In, in surface of Ge 2=8244
In, in Ge, under const. elec. current 1=14307
In, in Ge, n-type, controlled process 0=15933
In, in Mg, film, superimposed and film superconductivity 3=22805
In^{114}, in Zn single crystals, anisotropy 2=2101
InP, self-diffusion 1=4991
InSb, diffusion of impurities 4=4075
InSb, excess carrier coeffs., 130°K 4=30537
InSb films, of In and Sb, rel. to elec. props. 4=20808
K crystals, K atom surface diff. 3=25291
K, surface diffusion effects in growth 0=18309
K whiskers, surface 4=4559
K and Cl, on surface of KCl 1=17562
K, in Pt, thermionic emission study 0=6061
KBr, diff. of thallous ions 2=10412
KBr:Tl, colour centres, in K vapour 2=3956
KCl, additively coloured, diffusion and reaction of H_2O 4=17445
KCl, diffusion of Cl ion 1=14323
KCl, F-centre diffusion into crystals during additive colouring 0=20838
KCl, F-centres, effect of dislocations 2=3964
KCl, Na^{22} and Na^{24} diffusion 2=14468
KCl—KBr, mixed crystal formation 3=13004
Kr, fission-produced, in metallic U 0=11645
Kr, from irradiated U_3O_8 0=15620
Kr^{85}, in quartz, in phase transformation meas. 2=4361
Kr^{85}, in ThO_2 2=14461
Kr^{85}, in $UO_{2.0}$, $UO_{2.12}$ and U_3O_8 0=4308
Kr in U, evolution 1=19570
La—H system, proton self-diffusion 3=20671
Li^+, drift in Si 0=15940
Li ions, across p—n junction 2=14469
Li self-diffusion coeff. 2=19150
Li, self-diffusion, pressure depend. to 7000 atm 2=10415
Li, self-diffusion at 630°C 0=11496
Li, in vitreous silica, isotopic separation 1=13972
Li in GaAs, rel. to acceptors 3=17877
Li, in GaAs, elec. props. and chem. study 2=18598-9
Li, in Li_2SO_4 1=19803
Li, in Si 0=4302, 6103, 13560-1
Li^+, in Si, drift mobility, LiO^+ dissociation const. 1=11301
Li^7 through W, 1500°K 3=8455

Diffusion in solids—contd
$Li^{6,7}$, in W, polycrystalline 0=17976
Li in ZnO 1=17764
LiBr, spin-lattice relaxation due to translational diffusion 3=18143
LiF, Na diffusion 3=22817
LiF, pipe diffusion of Na 3=10687
Li_2SO_4. H_2O, proton mobilities from dielec. props. 4=28480
Mg of Ag^{110}, ion mobility, d.c., and scatt. 3=22831
Mg, film, of In backing, and film superconductivity 3=22805
Mg in Mg—Ni alloy at 1119°K 6=14464
Mg, in cathode Ni, heated in reducing atmos. 1=3686
Mg, Pu and U diffusion 4=1517
Mg_3Cd, of Cd, temp. var., ordering effects 4=4076
MgO, of Co, Ni cations, grain boundary, 1350°C 4=20299
MgO, Ni^{2+} grain-boundary diffusion 4=20300
Mg—1/2 wt. % Zr alloy, rel. to grain-boundary denuded zones 3=16116
Mg—Zr alloys, directional diffusion 4=12796
Mg-Zr system 4=23243
Mn^{54}, in Al, 450°-650°C 2=12448
Mn in Ca and Sr fluorides, by e.s.r. 2=10409
Mn, in NaCl. $MnCl_2$ and NaCl crystals 2=21070
Mn, in NaCl+$MnCl_2$ and NaCl crystals 3=6535
Mn, in Ni_3Mn 0=4700
Mn in Ti 1=17552
Mn—Fe(81%), of H heat treatment effect, and mech. tensile props. 4=20670
MnO_2, of O_2, > 100°C 4=20823
Mo, self-diffusion meas. rel. to temp. 2=6371
Mo, self-diffusion in single and polycryst. 3=17787
Mo, reactive diffusion in BCl_3 + $SiCl_4$ + H_2 atoms. 4=28489
Mo, diffusion of Co^{60} 2=14463
Mo in α-and γ-iron 3=22818
Mo, in Fe—Mo alloys, in d.c. field 1=12656
Mo, H_2 diffusion during $H_2 \rightleftharpoons 2H$ reaction using Mo catalyst 4=20117
Mo, H_2 and CO diffusion, above 1000°C degassing 4=22620
Mo, in Mo—Fe, in d.c. field, temp. depend. 1=12657
Mo in Ti 1=17552
Mo and W, in W—Mo alloys, in elec. fields 1=4992
Mo and W, in W—Mo alloys, in elec. fields 1=11222
Mo—N—C system, reactive diffusion 1=14310
Mo-Si, reaction diffusion 2=23205
Mo—Si system, reactive diffusion processes 4=12795
Mo—W alloy, 600°-700°C, components meas. 4=6875
Mo—W, component diffusion, 1500°-2600°C 4=22621
N, in Cr, activation energy 3=6865
N in Cr, anelastic meas. 2=21061
N in Fe, influence of glow discharge 2=21074
N in Fe alloys, internal friction peak 2=8711, 10737
N, in V, mobility, effect of pressure 1=2396
N adsorbed in W 1=20742
N, on W surface 0=7838
N_2, in Vycor glass 0=5051
Na, self-diffusion, pressure depend. to 7000 atm 2=10415
Na^{22} in analcite, self-diffusion by ion exchange 2=8248
Na, in aluminosilicate glasses 4=1645
Na^+, in glass, after addition of Na_2O, 400-500°C 3=22936
Na in NaCl by vacancy jump 3=23273
Na, in Pt, thermionic emission study 0=6061
NaCl, healing of indentations, kinetics 2=2420
NaCl, rel. to coalescence of pores 1=4075
NaCl, rel. to coalescence of pores 1=10276
NaCl, self-diffusion 0=20845
NaCl, self-diffusion of Cl^{36} in pure and Ca-doped crystals, 520-740°C 0=17974
NaCl, diffusion of Cl ion 1=14323
NaCl, Cu diffusion, effect of dislocations 3=15513
NaCl in LiF, pipe diffusion 3=2827
NaCl, Na^{22} and Na^{24} diffusion 2=14468
NaCl, Zn diffusion, temp. and conc. depend. 4=12803
Nb, self-diffusion and diffusion of Co^{60}, Fe^{55} 2=14463
Nb with Cr, Fe, Ni, Mo, stainless steel 2=3943
Nb, of H, 60°-100°C, n.m.r. meas. 4=17695
Nb, H_2, O_2 and CO diffusion, above 1000°C degassing 4=22620
Nb in Ta, submicron sectioning technique 4=12804
Nb in Ti—Nb alloys 3=20233
Nb—Pt, Se, Zn, Co, Ni—Ta, Fe—Mo systems 2=3954
Ne isotopes in fused quartz 1=17558

Diffusion in solids — contd
Ne, in Vycor glass 0=5051
Ni, films, from conductivity electrical and activation energy 3=15538
Ni, impure, grain boundary diffusion, ridge formation 0=21224
Ni oxide-coated cathodes, activator diffusion, doping effects 1=318
Ni, self diffusion 0=2826-7
Ni, self-diffusion, activation energy 1=15171
Ni, self-diffusion activ. energy, rel. to grain growth 1=9108
Ni, self-diffusion, 929-1303°C 4=12797
Ni, surface self-diffusion 1=19804
Ni, in Ag, activation energy 2=3942
Ni, of Ag, surface 3=20232
Ni, Cr diffusion, 600-900°C 4=15492
Ni in Cu single crystals 1=2394
Ni into Cu bicrystal grain boundaries 1=11224
Ni into Fe 1=17559
Ni^{63}, into Fe, Co, Fe–Ni 0=2827
Ni, in Ge 0=12231
Ni, diffusion of H and D 1=6114
Ni, diffusion of H and D 1=11227
Ni, H diffusion, purity 3=22819
Ni, of H, magnetic saturation obs. 4=22623
Ni, of H, and X-ray spectrum, emission, K edge Kronig
Ni, H_2 and CO diffusion, 970-1320° C 4=22622
Ni^{63} in Ni and γ-Fe, grain-boundary, meas. 4=20301
Ni in Ni–Mo alloy 2=6372
Ni^{63}, in NiO, meas. and mechanism 3=2828
Ni, in NiS layer, in reaction with S vapour 3=1387
Ni, in NiS polycrystals 3=20221
Ni^{63} in PbS 3=17785
Ni in Si 3=6537
Ni—C, C diffusion rel. to temp. 4=20295
Ni—Cr alloys, Ni and Cr diffusion rel. to Cr content 4=20302
Ni—Cr, hetero-diffusion coeff., 450-900° C 1=12402
Ni—Cr system, partial and total mass transfer 4=12788
48% Ni–Fe, cubic face-centred, H, mag. props., −130°C 3=15853
Ni–Fe–Cr alloys, thermal diffusivity, 20-900° C 4=15424
Ni ferrite, Ni formation, reaction kinetics 1=7902
NiO, proton diff., electrochemical meas. 2=14462
Ni—S system, effect of plastic deformation of Ni 1=983
NiS, Ni and S self-diffusion, expt. and theory 4=12798-9
NiS, self diffusion of S^{33}, 820-885°C, Ni^{63}, 750-880° C 3=8451
Ni solid α-solutions, interdiffusion of Cr and Mo 1=985
Ni–W, mutual diffusion during sintering 0=12070
Ni–Zn Fe-rich ferrites, effect on mag. props. 0=8061
O, self, in BeO, 1500-2000°K 4=12784
O, self-diffusion in PbO, oxidation process 3=20230
O, in Al_2O_3, self-diffusion coeff., temp. depend. 0=13562
O^{18} in CdO, vacancy mechanism 2=3953
O in Fe, rel. to internal friction peak, 250°C 3=8756
O, in Ge, calc. from internal friction 1=17560
O in Ge, effect of Cu present 2=4016
O, in GeO_2 2=4020
O^{18}, in ice, and defect, new type 3=6512
O, in MgO (periclase), self-diffusion, 1300-1750°C 0=15873
O and N in Zr 1=14326
O^{18} in NiO crystals 2=2100
O, in Si, calc. from internal friction 1=17560
O, in Si, during thermal oxidation 3=13600
O in SrF_2, rel. to colour centres 2=3958
O, in TiO_2, quartz and quartz glass 3=2831
O^{18} in UO_2, stoichiometric and nonstoichiometric 2=3944
O, in V, mobility, effect of pressure 1=2396
O^{18}, in ZnO 1=2395
O_2, in GeO_2, optical study 0=7900
O_2 in Nb_2O_5, rel. to elec. props. above 600°C 3=2923
O_2 in Si 3=15579
OH ions in NaCl, neutralization by HCl gas stream at 730°C 1=12403
P, meas. by n.m.r. relaxation times 3=5050
P in GaAs 3=20227
P, in KCl, and electrolytic migration 1=14314
P, in Si, distrib. 2=21072

Diffusion in solids—contd
P, in Si, distribution 3=2833
P, into Si, effect of oxide layers 0=6059
P, in Si, fast mechanism 3=2832
P, in Si, p-type, concn. profiles 1=7643
P, in Si, P distrib. 1=3687
P, in Si, technique 2=18601
P, in SiO_2 film 0=11642
P_2O_5, in Si, from P_2O_5–H_2O azeotrope 2=18602
Pb, electric transfer 2=6374
Pb, mobility, effective charge of Pb ions 2=18609
Pb^{210} self-diffusion in PbSe 2=2099
Pb, self, 20-85°C, test of sensitive α-recoil method 4=1516
Pb, in Au crystals in boiling HCl 3=4888
Pb/Bi supercond. double layers, mutual diffusion 4=24513
Pb, into Cu and Cu:Pb, temp. depend. 2=12451
Pb^{2+} in KCl 3=15510
Pb^{2+} in KCl, complexes formed with cation vacancies 1=19806
Pb^{210} in PbS, effect of stoichiometry and doping 3=10688
Pb, in Pb–Tl solid soln. 2=3941
Pb in Sn, Pb migration rel. to grain growth 2=804
Pb, from U, and anomalous PbS formation 4=23710
$Pb^{206,207}/U^{238,235}$ systems in minerals 4=4079
PbS, Pb^{210} diffusion, at 700°C, rel. to stoichiometry 4=15491
Pd, Pd-25% Ag, H diffusion, purity 3=22819
Pd, technique for H detection in gas mixtures 0=21299
Pd—H, H diffusion at room temp. 4=17444
Pt, by impurity thermionic emission 3=4203
Pt, self-diffusion 2=23206
Pt, surface self-diffusion, multiple scratch study 2=15087
Pt, in Au, tracer conc., 800°C to Au m.p. 0=20846
Pu, in Al, 600° C 1=17561
Pu, in graphite, above 2100°C 2=6370
δ-Pu, self-diffusion coeff., 350°-440° C 4=22624
Pu, thermal diffusivity determ. 4=17443
Rb^{86} ions in KCl–RbCl mixed crystals 0=6063
Re–W interdiffusion, rel. to intermetallics 2=8245
Rn gas, in Al, Ti, Fe, Th and U oxides 1=17563
Rn^{222}, in ThO_2 0=15874
Rn^{222}, in U_3O_8 0=4308
S^{35} in Fe, 880° to 1450°C 3=8450
Sb, in Ag films, elec. cond., 70-105°C 1=979
Sb, in Al–Ge, Al conc. depend. 1=988
Sb, into Cu and Cu:Pb 2=12451
Sb^{124}, in Cu, mobility and effective charge 2=18597
Sb, in Cu single crystals 0=17971
Sb, in GaSb, elec. props. depend. 0=4359
Sb, in Ge, under const. elec. current 1=14307
Sb, in Ge, equil. with Bi–Sb alloy vapour 4=1513
Sb on Ge surface, 250-650° C 3=20223
Sb in Ge-Al 1=4989
Sb^{124} in Sn, d. c. -induced, analysis 4=12785
Se, self-diffusion activation energy, effect added Br 0=6057
Se of Cl, temp. var. 4=4165
Se, in GaAs, radioactive and elec. meas. 3=22809
Se, in GaSb, elec. props. depend. 0=4359
Se and Hg, in Te 2=18610
Se, of Th, optical obs. 3=15512
Se and Tl in Tl_2Se and InSe, rel. to rectification 3=25293
Si crystal dislocation networks due to diffusion 4=17433
Si, diffused junction depletion layer calculations 0=11696
Si, diffused layer depth meas. 2=8384
Si, diffusion pipes 2=18604
Si, enhancement when proton irrad. 4=1544
Si, impurities 3=22824
Si, impurity diffusion, accel., after 300—1000 keV proton irrad. 4=9995
Si, impurity distrib. meas. of diffused layers 4=28448
Si, interstitial impurities, mechanism 2=12452
Si, layers, impurity-induced pipes 2=18603
Si, minority carriers 1=8947
Si, n-type, minority carrier diffusion length 4=4168
in Si oxidation 2=19143
Si, p—n junction, minority-carriers diffusion 4=4180
Si, p-type, Cs diffusion 3=25349
Si, rel. to proton-irrad. 3=22825
Si, self-diffusion coefft. meas. 4=6878
Si, in solid, rel. to distribution coeff. and impurities 4=15488
Si, surface effects 2=23203

Diffusion in solids—contd
- Si, to thin layers, impurity-concn. profiles 2=23208
- Si tunnel diodes, P diffusion-doping 3=20361
- Si, vacancies, during quenching, calc. 2=21076
- Si, B diffusion (950-1375°C) 0=6058
- Si, of B, distrib. 3=22822
- Si, diffusion of B and P by box method 1=14318
- Si, B and P diffusion, p–n junction prep. 0=597
- Si, in BCl_3 and N_2, minority carrier lifetime 0=11700
- Si, of Ga, internal elec. field effects due to Sb 4=28484
- Si, of Ga and B, surface conc. 4=4077
- Si, of He 4=28490
- Si, Ni and Au diffusion, dislocation loop formation 4=1481
- Si, of Ni, rel. to elec. cond. var. meas. 4=28453
- Si, Ni^{63} tracer diffusion, meas. of Ni solubility in Si 4=4497
- Si, diffusion of O 1=17712
- Si, O diffusion, i. r. absorpt. band, dominant, stress-induced dichroism meas. 4=28485
- Si, O_2 into, at 1250°C 0=1601
- Si, diffusion of P 2=18600
- Si, P and B diffusion in, ion bombardment effects 3=22823
- Si, of P, concn.-depend., calc. 4=9993
- Si, P diffusion, P_3N_5 as diffusion source 4=22625
- Si, of P, dislocation distrib. near junction, meas. 4=28471
- Si, of P, dislocations prod. 4=22590
- Si, diffusion of P along grain boundaries 1=11228
- Si, of P, through SiO_2 films 4=28483
- Si, into V, two-component superconductive films 4=5527
- Si, Zn diffusion in elec. fields 3=17790
- SiC, Au diffusion, rel. to hot electron emission from p–n junctions 4=569
- Si–Fe, containing C, diffusion after-effects 3=13254
- SiO_2, of O_2, in SiO_2 film growth in O_2 at 1250°C 3=23516
- SiO_2, Sb diffusion 3=25294
- SiO_2 to Si diff. of Ga, segregation coeff., p–n jn. method, two boundary model 4=30578
- Sn atoms, in thin films, effect of O_2 on mobility 4=13684
- Sn, elec. transfer 2=6374
- Sn, high press., vacancy jump mechanisms 4=30580
- Sn, mobility, effective charge of Sn ions 2=18609
- Sn, polycryst., grain boundary self-diffusion 3=2830
- Sn, self-diffusion, effect on Mössbauer effect 1=3604
- Sn, self-diffusion in polycrystals 2=3947
- Sn, self-diffusion in Sn crystals 2=605
- Sn, in Au crystals in boiling HCl 3=4888
- Sn, in GaAs 1=12401
- Sn, in GaAs, radioactive and elec. meas. 3=22809
- Sn in Ge, disloc., effect on boundary 4=25962
- Sn/In supercond. double layers, mutual diffusion 4=24513
- Sn, in InSb, single- and polycrystals 1=14308
- Sn, in Ni surface 2=21068
- Sn, in Ni surface 3=6539
- Sn, into Ni, two-component superconductive films 4=5527
- Sn, in Se, zone refined 0=13942
- Sn–Cu alloy, change of length due to a.c. electrolysis 0=4309
- SrF_2, pure, on annealing in O_2 and air 4=12787
- Sn–Tl, grain boundary segreg. of Tl 3=16118
- T, in Zr, autoradiographic technique, 140°-240°C 2=21073
- Ta, in Ge, temp. and elec. cond. depend. 0=1599
- Ta–Si, reaction diffusion 2=23205
- Te, in CoTe polycrystals 3=20221
- Te, in GaSb, elec. props. depend. 0=4359
- Te, in Ge 2=21063
- Te, in Ge 3=2825
- Th, in W, field-emission microscope study 2=10947
- $ThO_2-Y_2O_3$ solid solns., of Xe^{133}, on irrad. and heating 4=15496
- Ti, point defect mobility 1=12380
- α-Ti, self-diffusion 4=1518
- Tiα', self diffusion 4=30579
- Ti, self, thermal, high temps. 3=22828
- Ti, in Ni–Ti alloys, phase growth and coagulation 2=8855
- Ti^{44} in Ti, activation energy, frequency factor, temp. effect 4=28492
- Ti–Cr system, b.c.c., Kirkendall effect 3=4887
- Ti hydride, proton magnetic resonance study 0=18230
- TiH, proton resonance study 1=6437
- Ti–U, study techniques 1=982
- Tl, in Ge 2=12460, 14465

Diffusion in solids—contd
- Tl ions, in Ge, effect of elec. field 3=25345
- Tl^+ ions, in KBr, meas. 3=6536
- Tl^+, in KBr, meas. from absorpt. band 2=3946
- Tl^+ in KCl, pressed disks, mixed powders 1=19806
- Tl, in Pb–Tl solid soln. 2=3941
- Tl^{204} in polycryst. Se, elec. transport 2=18611
- Tl, in Te, temp. depend. meas. 3=17791
- Tl in TlCl, rel. to elec. cond. 1=19838
- U, β-phase, self-diffusion 0=11644
- α–U, self-diffusion 2=606, 6376, 18612
- β–U, self-diffusion 2=3948
- α–U, self-diffusion anisotropy 2=14467
- U, self-diffusion, effect of adding Mo, Zr, or Nb 2=18613
- U, in Al, maximum penetration 0=13563
- γ–U, diffusion of Au 2=2094
- U in graphite, above 2100°C 2=6370
- U^{232} in UO_2 2=8249
- U, its alloys and cpds., review 3=8454
- UC, self diffusion of U and C 4=13611
- UC, sintering activation energy meas. from elec. cond. var. 4=13665
- UO_2, inert gas release, abnormal kinetics 3=22441
- UO_2, N diffusion kinetics 4=28493
- UO_2, stoichiometric, U ion diff. 2=3949
- UO_2, of fission Xe, on annealing at 1400°C 4=12805
- UO_2, of Xe, increase on irradiation 4=6879
- $UO_2-Y_2O_3$ solid solns., of Xe^{133}, on irrad. and heating 4=15496
- V, of O and/or C, strain ageing effect on mech. props. 4=29021
- V in Ti 1=17552
- V^{48} in Ti activation energy, frequency factor, temp. effect 4=28492
- W, sintering kinetics, 1300°-1750°C 4=7687
- W, surface migration 0=7839
- W surface, ordered, thermal rearrangement 3=18376
- W, thermal diffusivity, 1600-2960°C 4=15495
- W, in Co–W alloy 1=14303
- W, H_2 diffusion during $H_2 \rightleftharpoons 2H$ reaction using W catalyst 4=20117
- W, H_2 and CO diffusion, above 1000°C degassing 4=22620
- W in α- and γ-iron 3=22818
- W, of K, surface 4=23610
- W, O diffusion, activation energy determ. by internal friction 4=17446
- W in W, TaC, TiC–WC, TiC–WC–TaC 3=25295
- W(15 at.%)–Mo, of W and Mo, electric field, effects 3=20237
- W–Si, reaction diffusion 2=23205
- Xe, in Ag, 500-800°C 0=15868
- Xe, in ceramic oxides 4=20293
- Xe^{133} fission product, in graphite 3=10427
- Xe^{133}, in ThO_2 0=15874
- Xe^{133}, in UC 0=4308
- Xe, in UC powder 3=2834
- Xe^{133}, in U oxides of diff. oxygen content 0=1607
- Xe^{133}, in UO_2 2=6362
- Xe, from irradiated U_3O_8 0=15620
- Xe^{129}, in solid and liq. Xe, meas. 3=18154
- Y, solid-state electrolysis 2=6379
- Y_2O_3, Y diffusion, 1400-1800°C 3=22827
- Yb, of O_2 and N_2, between interstitial sites 4=15497
- Zn, elec. migration, current density depend. 1=14304
- Zn, impurity diffusion, screened interaction model 4=9997
- Zn, mobility, effective charge of Zn ions 2=18609
- Zn, electrical transfer in AgZn 2=8247
- Zn, self-diffusion in AgZn, temp. depend. 2=8247
- Zn, elec. transfer in Al, effective charge 2=10416
- Zn, in Al, temp. depend. 2=6380
- Zn, in Al and Al–Zn alloy, effect of fatigue 1=19807
- Zn, in AlSb 2=16665
- Zn, into Cu, grain-boundary and lattice diffusion 0=1602
- Zn^{65}, in Cu, rate for small penetration 3=13001
- Zn, in Cu, saddle-point config. model 3=2789
- Zn, in Cu_2O, microstructure effects 0=11640
- Zn, in CuZn alloy, Ne^+ ion irradiation effect 1=14322
- Zn, Ga diffusion, after adsorption 4=26729
- Zn, in GaAs Esaki diodes, rapid 4=17504
- Zn in GaAs, under excess As vapour 4=22615
- Zn, in GaAs and GaP, mechanism expts. at 900° and 1000°C 4=22617
- Zn, in GaAs and GaP, 700° to 1100°C 4=13458

Diffusion in solids—contd
Zn, in GaAs, interstitial mechanism 2=21066
Zn, in GaAs, interstitial—substitutional 3=20225
Zn, in GaAs, using radioactive tracers 0=9918
Zn (vapour), into GaAs, rel. to temp. and Zn press. 1=17565
Zn in GaP 4=12790
Zn^{65}, distribution coeffs. between GaSb and Ga—Sb 4=4072
Zn, Hg diffusion, after adsorption 4=26729
Zn, of Hg, temp var., surface and volume 4=1521
Zn in InP, 600°-900°C meas. 4=22619
Zn and Cd in InSb 2=6381
Zn, in InSb 0=9920
Zn, in InSb, distrib. between solid and melt 2=17050
Zn, in InSb, single- and polycrystals 1=14308
Zn, diffusion in Sn crystals 2=605
Zn, in sintering Zn oxide spheres 0=1958
Zn^{65}, in ZnO 1=2395
Zn, in ZnO, heat treatment in Zn and air 0=569
Zn in ZnO, 720° to 840°C 1=14320
Zn in crystalline ZnS 1=8914
$ZnGeAs_2$ 3=8518
ZnS phosphors, cathodoluminescence induced by electron bombardment 1=14652
ZnS; Cu diff. rel. to electroluminescence 3=15723
ZnSb, diffusion of Fe and Cd 0=6056
Zr, b.c.c., anomalous self-diffusion 4=1520
Zr, point defect mobility 1=12380
Zr, self-diffusion 1=17567
α-Zr, self-diffusion, effect of Fe and Ni impurities 1=6116
Zr, self-diffusion in Zr alloys 1=6115
Zr, self, thermal, high temps. 3=22828
Zr, Fe diffusion, temp. depend. 4=15498
β—Zr, of H, coeffs. 4=1522
Zr, of Zr^{95} and Nb^{95} 4=6881
Zr alloys, of H, heat of transport 4=6880

glows, with cathode regions with and without edges 2=169
glow, cathode, spectra, and surface ion neutralization 4=18722
glow, cathode zones with and without edges 2=7580
glow discharge, cathodic part, mechanism 1=18800

Discharges, electric—contd
glow, cleaning of glass 0=3578
glow discharge coating, directional 0=113
glow, cold-cathode, effect of cathode photoemission 1=18801
glow, cold-cathode, low-pressure, impedance and determ. of equiv. circuit 4=18723
glow, cold cathode, in mag. field, cathode spot and ball of fire movement 4=5573
glows, collimation of sputtered particles 2=9647
glows, in constant-current device 2=11575
glows, contamination from walls due to ions 2=9328
glows, cross-section of luminous discharge channel 1=13073
glows, dielec. permittivity meas. 3=19216
glows, diffusion-controlled plasma theory 2=11638
glows, d.c., cathode fall, dynamic aspects 3=7478
glow, d. c., cathode fall region, dynamic aspects 4=18720
glow, d. c., cathode surface distrib. of positive ionic density 4=29884
glow, d.c. cold-cathode, rel. to elec. oscillations 2=9548
glow, d.c., electron conc. versus time, by h .f. resonance 3=5641
gas, d. c. excited in photoelec. cell, Joshi effect 4=29876
glow, d. c., positive column moving striation, pulsed microwave technique 4=27499
glow, distrib. of energy to electrodes 2=17800
glow, effect on CdS luminesc. and photocond. 2=6600
glow, effect of hollow cathode on striations 3=7477
glows, electric oscillator analogy 2=5316
glows, electron attachment cross-sections eval. 2=17790
glows, electron emission rel. to photons 3=7632
glows, electron energy loss 4=495
glows, electron run-away processes 1=7022
glows, elimination in vacuum furnaces 1=6985
glow discharge, effect of mag. field 3=9750
glow discharges, field emission theory 3=373
glow, H, plasma efficiency meas. 4=8644
glow, h.p., without walls 2=5312
glow, as heat source for surface and zone melting 2=11633
glow, heavy particle range and energy loss in normal cathode fall range 4=14592
glow, high current, operating conditions 0=9014
glow, high-current, stability 0=7087
glow, high press., relax osc., freq. var. 4=14591
glow, in hollow cond., e.m. wave phase shift 4=21659
glows in inert gases, moving striations, critical currents 3=4062
glow, in inert gases, sputtering of Mo 1=16442
glow, instability in mag. fld. without current 4=14593
glow, instability of positive column 2=7582
glow, ion energies at cathode 0=19638
glows, ion energies at cathode, meas. 3=16916
glow, ion plasma oscills. near cathode 4=24610
glow-discharge ionization probes for shock tubes 3=1762
glow, Kr ion penetration into Mo 4=27581
glow, l.p., diffusion waves 0=7080
glow, low-pressure, spiraling, theory 4=18732
glow, low-pressure, weak-current range investigations 3=24240
glow, maintaining voltage, temp. effects 2=17799
glow, mass spectrometry of rare gas ions 2=5313-14
glow, mechanism, fringe slow secondary electron effects 4=5574
glows, moving striation investigations, by pulsed image convertor 4=5571
glow, moving striations rel. to plasma parameters 2=7579
glow, negative, light modulation obs. 3=7479
glow, negative, oscills., var. with pressure and potential 4=471
glow, non-stationary, cathode fall region 3=4055
glow, nonstationary, impedance—frequ. characteristic 3=21750
glow, normal cathode fall, nature 3=4056
glow, normal and min. cathode fall, theory 4=16450
glow discharge oscillator tubes 0=7090
glow in O, ion balance 1=16288
glow, oxygen, ions, mass spectrometry 3=14552
glow, in O and N, electron energy distrib. 1=16317
glows, penetration into gaps, expt. 2=9550
glows, plasma, self-generated potential waves 2=17852

Discharges, electric—contd

glow, rel. to polystyrene film formation 4=4207
glow, positive column constriction 3=14549
glow discharge, positive column electron and gas temp. 1=16284
glows, positive column instability in mag. field 1=284
glow, positive column plasma, electron temp., press. depend. 0=9018, 19685
glow, pulsed diodes, cathode particle vapours 4=5569
glow, with self-generated elec. oscillations, impedance 4=469
glow, sound waves, radial and azimuthal 4=11554
glow discharge, spatial period of moving striations 1=16289
glow, spectra in N_2, H_2, NH_3, O_2-N_2, N_2-H_2 0=1520
glow, sputtering, rel. to current 3=4213
glow, stability for small currents 1=16290
glows, static and moving striae in positive columns 1=4577
glow, thermally inhomog., temp. distrib. 0=1120
glow tube, impedance—pressure characteristics 3=4061
glow, volt. and curr. density rel. to cathode region boundary 1=18803
glows, wall temp., longit. variation 2=22191
glycerine, excitation temp., emission band study 3=381
halogen counters, build-up and spread 3=4034
with heated cathode, in mag. field, press. and field depend 4=24608
helical instability of linear discharge plasma 3=12088
hexane, discharge characteristics 4=2704
high-current constriction mechanism 0=5302
high-current, current meas. by Rogowski coil 4=417
high-current, electrode sheath effects 4=18944
high-current, electrodeless, initial stage study 2=17798
high-current, electron density, interferometer meas. 4=16444
high-current, linear, conductivity meas. 2=9593
high-current, meas. 0=5304
high-current pulse discharges in conical chambers 0=5306
high-current pulse discharges, mag. and elec. field distrib. 1=9583
high-current pulsed discharges 0=5320
high-current, runaway electrons, e.m. radiation 4=16477
high current, straight and toroidal tubes 1=7032
high-pressure, electrode sputtering 3=14533
high-pressure, potential minimum distance from heated cathode 3=7466
h.p., probe meas. of local potentials 0=16992
high-voltage and high-pressure, breakdown mechanisms, review 4=18750
high-voltage impulse generator circuit 0=12571
hollow beam with low pressure, negative ions 3=1946
hollow cathode discharge within microwave cavity, two-state operation 4=16445
hollow-cathode, elec. field 1=16090
hollow-cathode, electronic and ionic currents 1=11916
hollow cathode, highly ionized 2=17794
hollow-cathode, ionization of metal atoms 1=10671
hollow cathode, negative resistance, theory 3=378
hollow cathode, sputtering 3=377
hot-cathode diode, as h.f. switch 0=12601
at hot cathode, electron diffusion, in mag. field 0=1128
hot cathode, high press., electron space-charge 3=9738
hot-cathode P.I.G., in mag. field, stabilization by transverse grid 3=21735
ignition energy transfer to gas mixture on breaking current contacts 0=14979
imprisonment of resonance radiation 0=2729
impulse, in crossed elec. and mag. fields 4=18923
impulse, preionization by electron beams 3=7464
impulse streamer branching from Lichtenberg figure studies 4=2955
impulsive, powerful, fast electron energy meas. 3=7452
impulsive, shock-controlled spread 4=21478
induction, in positive ion sources, r.f. excitation 3=19189
induction, study of converging plasma jets 4=8793
inert gas cleanup, mechanism 0=10703
inert gas glow, with low-maintaining potential, 22-35 V 4=18730
inert gas glows, effect of active gas addition 4=18731
inert gas—H_2 mixture, motion of striations 3=19196

Discharges, electric—contd

inert gas + N_2 weak discharge afterglow, metastable N_2 colls 4=24613
inert gases, binary mixtures, separation 0=5281
inert gases, electron energy exchange, high rate 3=24268
inert gases, l.p., anode spots (plasmas) 0=16984
inert gases, l.p., effect of electrode work function 2=5321
inert gas, low press., hot cathode, noise, var. current, cathode temp. 4=21472
inert gases, low-press., moving striation mechanism 3=7458
inert gases, moving striations, successive prod. 0=2335
inert gases, stabilizing by metal atoms 0=3750
inert gases, striation propagation study 4=8647
inert gases, striations, velocity, theory 0=12596
insulating gaseous systems, at press. between atmospheric and high vac. 4=20957
insulating particles on cathode surface effects 0=9007

insulators in vacuum, surface 3=16923
intermittent, gas between two dielectrics 3=9741
inverse-pinch type, stable plasma 3=21765
iodine discharge, dependence of pressure 1=4579
ion centrifuge, currents calc. 2=19938
ion energies, distrib., current intensities 3=19187
ion oscillations in plasma, detection 0=19697
ion oscill. at potential min. and l.f. oscill 3=14543
ion reson., r.f. probe obs., hot cathode Hg discharge 4=14681
ion sheath thickness, meas. using double probe with fixed potential 1=280
ion sources, positive column formation 0=10973
ionic sound waves, obs. 3=7457
ionization chamber, var. with supply impedance 4=11561
ionization chambers, self-maintained discharge due to α-particles 3=4038
ionization gauge, Phillips type, discharge mechanism 0=19614
ionizing, interactions with getter films 4=21202
isopentane log i—d plots, interpretation by Townsend and streamer theory 1=1897
isotope labelling by gaseous discharge 0=15527
jet-controlled arc, as spectr. light source 3=16783
Joshi effect, adsorption and time variation 2=19917
Joshi effect in counters 2=3190
Joshi effect, dependence on ageing and of exciting field 1=281
Joshi effect, mechanism, photo-electrons from surface 4=27500
Joshi effect, thermionic analogue 3=9737
on Jupiter, radio emission, red spot origin 0=18640
Langmuir probe operation in electronegative plasma 0=9039
Langmuir swept probe system, electron temp. and ion density 1=279
Lawrence vacuum pump 0=8720
as leak detection in vacuum systems 4=18304
Lichtenberg figure growth in nanosec time range 4=14623
Lichtenberg figures on colour films 2=19930
light flash prodn., $10^{-7}-10^{-8}$ sec 2=19698
lightning, artificial initiation 2=6914
limiting current, effect of azimuthal mag. field 3=7487
line intensity, effect of magnetic field 0=10884
linear diffuse pinch, hydromagnetic stability 1=306
linear, high-current, at atmospheric pressure 4=18700
linear impulse discharges in H_2 and D_2 1=13071
linear pinch, symmetry, rel. to capacitor arrangement 4=5642
linear pulses, high-current, plasma studies 2=9572
longitudinally homog. column, Schottky's diffusion theory 0=247
low-frequency excitation, Trichel light pulses 3=9742
l.f. silent discharges, threshold protential 0=14989
l.p., anode fall, acommodation coeff. 0=9037
low-pressure, acoustic phenomenon due to pulsed auxiliary discharge 2=5366
l.p., cathode emission meas. 0=5334
low-pressure d.c., moving striation vel. rel. to external resistance 1=18799

Discharges, electric—contd
low-pressure, disturbance by probe 3=368
low-pressure intermittent gas discharges 2=13547
low-pressure, near limiting current, model 4=18699
low-pressure, pulse ignition study 2=9541
low pressure, in strong ionization regime 4=27495
low press., time resolved Schlieren and interferometer studies 3=9739
l.p., X-ray production 0=5540, 7084
low voltage 3=21724
low-voltage, rel. to ionic spectra excitation 3=24230
low-voltage pulse discharge for spectra production 0=3628
low-voltage, in vacuum, spectroscopic study 2=17801
luminescent channel between positive point and plane 4=2954
luminescent in Hg vapour, kinetics of positive ions 1=1893
Luxembourg effect, in free space columns 3=9805
magnetic dipole radn, stimulated emission 3=25059
magnetic field effect on thread discharge 3=7468
meniscus-type, l.f. noise and oscillations 3=4039
metal erosion, in gases and dielec. liquids, electron microscope and X-ray studies 2=9561
methane, electron avalanches, mean energy and drift velocities 4=11546
methane, electron drift velocity, avalanche meas. 4=11253
methane, free methyl radical detection 1=1477
methane, light emission, time depend., avalanches 0=2330
methylal, light emission, time depend., avalanches 0=2330
microdischarges in vac. in presence of oil vapours 2=9559
microwave resonance in hot plasma column 3=9782
minimum principle for discharge voltage, proof 1=9527
mobility controlled sheaths, I—V relations 4=18689
molecular spectra meas., testing of theory 3=2620
monohalogen benzenes, glow discharge spectra 1=16286
moving striations, dispersion and amplific., theory 3=9752
moving striations in l.p. discharges, theory 0=248
moving striations in tapered discharge tubes 3=24234
multipactor effect, mechanism 1=16299
multipactor one-sided discharge modes 4=2953
naphthalene glow, triplet-triplet transition 2=3015
in narrow gaps limited by dielectrics 4=29877
nebulae, planetary, spiral and barred spiral, theory 3=18645
nebulae, spiral stellar 1=9291
negative ion decays in pos. columns 0=7088
negative resistance and hot electrons, analysis 1=11277
negative temp., possible prod. 0=1109
neutral gas, electron transport model 3=9744
neutralization and de-activation near metal surfaces 4=8642
new light effect, optimum observation conditions 1=8318
new r.f. initiation and maintenance technique 2=15906
nitrogen—organic cpds, $B^2\Sigma^+_u \rightarrow X^2\Sigma^+_g$ transition spectra 3=12850
number density distribs, low pressure 4=18701
organic cpds., tritium labelling 0=20369
organic vapours, Townsend, effect of space charge on current growth 3=21756
oscillating electron type, axial potential troughs 0=14985
oscillations, d.c. column current 4=11540
PIG, electron gyrofreqn. harmonics emission 3=7465
P.I.G., oscills., standing wave modes 3=21733
P.I.G., oscills., standing wave, theory 3=21734
PIG reflex, equilib. mechanism, $D_\perp$ meas. 3=9745
Peek's formula for crit. elec. field var. with internal coaxial cond. radius 4=18743
Penning cold cathode discharge, cathodic etching 1=6493
Penning discharge, electrical characteristics 2=5309
Penning discharge, electron beam probing 3=21731
Penning discharge, e.s. gradients 1=13088
Penning, as extreme u.v. source 3=7348
Penning with hot cathode, use as ion source 4=18697
Penning, rel. to ion pumps 4=18265
Penning, low-press., mechanism 3=7453
Penning, radial field distrib. meas. by Stark effect 3=21730
Penning, radiation, due to electron cloud rot. instabilities 4=5797

Discharges, electric—contd
Penning-type, instability 3=21732
in Penning-type tubes, space-charge effect on electron kinetics 3=21871
Penning, X-ray prod. by anode bombardment, max. energy 4=21468
Phillips pulse, plasma, spectral study 2=22181
photography, high-speed, review of methods 0=19463
pinch, circuit dynamics 0=16998
pinch, linear, stability 0=19658
pinch, linear, surface instabilities 0=19655
pinch, mechanism 0=5301
pinch, nonadiabatic transverse, dyanmics 0=1104
pinch, stabilization 1=307
pinch, "Theta", pre-ionized, detonator-closed circuits 0=19635
pinched, D plasma, electron density meas. 2=5350
pinched, inwardly accelerating, stability 2=11672
pinched linear, mm-wave diagnostics 3=19230
plane, collisionless, electrostatic stability 3=1943
plane diode, weakly ionized plasma, potential distrib. 4=14626
plane-to—sphere, in air at $<2\,\mu$Hg, electrode materials transport 0=14995
plasma acceleration, prod. of shock waves 1=18840
plasma, diffusion, ambipolar, and vol. recomb., rel. to electron density 4=14641
plasma, electron density, long. var., hot-cathode Hg 3=19204
plasma gun, inductive 3=21809
plasma "gun", mag. operated, calc. 3=9808
plasma, hot, due to electrolytic condenser bank 3=5656
plasma, ionization equilibria, spectral line intensity 2=1419
plasma isolated region formation mechanism 4=18947
plasma jet, rotating, obs. in mag. field 2=9592
plasma jet, 7 kW, for laboratory use 0=3779
plasma in mag. field, electron current step with field increase 1=9598
plasma noise 2=19947
plasma oscill. onset, spectroscopic detection 2=22233
plasma-sheath eqn., collisionless, exact soln. 4=8731
plasma-sheath formation by r.f. fields 3=21800
point-discharge, wind dependence 0=1116-17
point, from natural and artificial points 1=15235
point-to-plane, inert and other gases 2=9545
polyatomic gases, canal build-up, avalanche processes 0=239
polyethylene, corona bombardment 2=12982
population inversion in two-gas mixture 3=7467
positive column afterglow, quasi TE_{11} mode absorption 4=14904
positive column, a.c., instability 4=18734
positive column, ambipolar diffusion eqns. 2=22187
positive column, anomalous diffusion 3=12095
positive column, compression by inhomogeneous h.f. field 2=7578
positive column constriction 4=18733
positive column, contraction theory 3=1951
positive column in diffusion conditions 0=5283
positive column, diffusion, in longitudional magnetic field 3=14554
positive column, d.c., local pulse disturbance 4=18980
positive column, dissociative recombination and constriction 3=4059
positive column, electron energy distrib. 3=21746
positive column, electron energy distrib. calc. 4=21485
positive column, electron pressure effects 3=21748
positive column, electron temp. relaxation time determ. 4=24615
positive column, electron velo. distrib., effect of adding inert gas 4=21486
positive column, electron velocity distrib. meas. 4=2957
positive column, enhanced electron—ion interaction, in longit. mag. field 1=2964
positive column, heating and instability in mag. field 2=22192-3
positive column, helical instability, in mag. field 3=16915
positive column, impedance characteristics 4=18735
positive column instability in mag. field 1=9533
positive column, instability in mag. field 2=1434
positive column, instability in mag. fields 3=7476

Discharges, electric—contd
positive column, internal mag. field meas. 4=11673
positive column, ionization striations 4=18736
positive column in mag. field, abnormal diffusion 1=13072
positive column, motion of striations 3=12094
positive column, negative ion effects 4=473
positive column, noise spectrum in mag. field 3=24285
positive column, non-contracted, negative ion effects 3=1971
positive column plasma, electron diffusion 3=12100
positive column plasma in a waveguide, cm wave propag. 1=9687-8
positive column, range of existence without running striations 4=16451
positive column, stability in mag. field 3=21747
positive column, stability in time-dependent mag. field 4=8648
positive column, striated, in longitudinal mag. fld. 3=19214
positive column, striation waves, theory 3=19209
positive column, temperature distribution 1=16283
positive space-charge sheath, positive ion movement, theory 4=11513
potential well produced by multipacting electrons, theory 2=1400
pre-breakdown current in compressed gases, temp. depend. 0=3743
prebreakdown discharges in vacuum 3=9758
precursor effects in intense discharges, two models 4=8638
predischarges at very low press., diff. regions 4=16441
pressure depend. of parameters, a. c. discharges 4=8634

spectroscopy, time-resolved 2=1451
sputtering from metallic electrodes 2=19912
standing-wave, in air 4=24605
and stars, temperature 3=16405-6
strata, amplitude and shape 4=16446
stratification waves, physical mechanism 3=9735
striation wave formation, primary perturbation from influence 3=19193
striations, moving, in cross-type tube, interrelation 2=757
striations, moving, microwave study of charge densities 4=14601
striations, moving, propag. in 2-cathode tube 3=4044
striations, moving and stationary, hydrodynamic character 3=19211
striation, reversible, of Fe and its alloys 2=7572
superposed d.c. and h.f. discharges, V—I characteristics 1=1896
surface charge on dielectric after h.v. discharge, meas. 0=5254
Surface, dielectric, critical field intensity 3=24265
surface, on various dielec. arrangements, theory 3=1940
surge diverters using trigatrons 0=3744
surge generator, design and performance 0=12600
switch, Hg pool cathode with gas filling 3=4082
switching, by superconducting devices 4=18627
TR tube, deionization time, effect of voltage 2=13548
temperature measurement, P I G reflex pulse discharge, using a Fabry—Perot interferometer 3=24229

Discharges, electric—contd
- thermal equil. criteria, re-examination 4=11541
- thermionic energy convertor, effect of interelectrode Cs plasma 3=24206
- thermonuclear processes 0=5836
- theta-pinch, apparatus, observations 2=1442
